Logo

Primary logo lockup

Our logo is used in nearly all of our communications. It is our stamp of authenticity. It is most important that it is reproduced consistently in a way that it is clearly legible and identifiable. It is vital that the correct logo is used in each situation.

The horizontal version is our preferred logo. It should always be the first choice over the vertical logo.

Primary logo lockup

The Enphase logo lockup is made of two elements, the Logo mark and the wordmark. The Enphase logo has been trademarked. Please ensure that you always use the logo with its registered trademark. For specialty items, where the trademark cannot be printed clearly, it is permissible to omit the trademark symbol.

THE LOGO LOCK-UP

THE LOGO MARK

THE WORDMARK

REGISTERED
TRADEMARK

Primary logo clear space

The minimum clear space around the primary logo should be height of the ‘E’ in the wordmark.

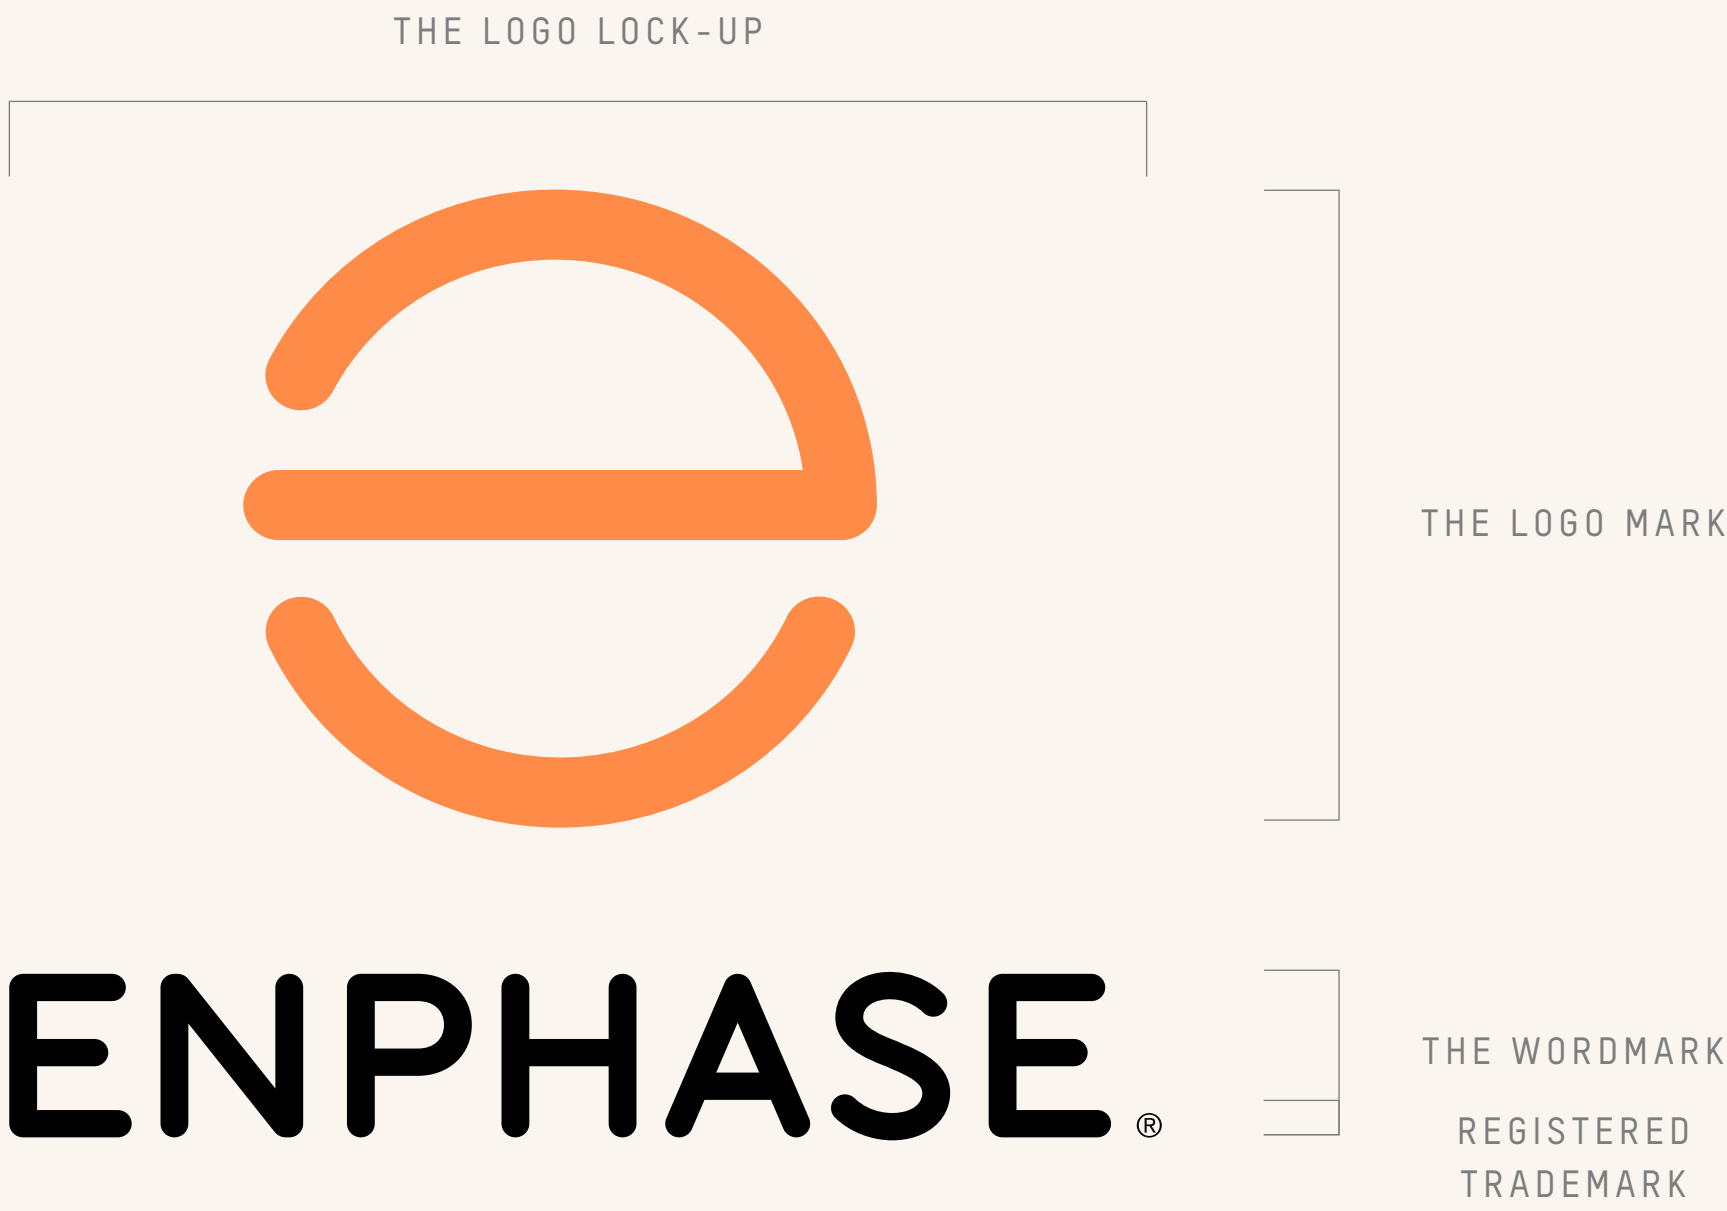

X= HEIGHT OF
THE ‘E’ IN THE THE
WORDMARK

X		X
		
X		X

Secondary stacked logo

The stacked version of the logo is ONLY used in exceptional situations where limited space prevents the use of the horizontal logo.

Stacked logo clear space

The minimum clear space around the stacked logo should be twice (2x) the height of the height of the ‘E’ in the wordmark.

X= HEIGHT OF THE ‘E’
IN THE THE WORDMARK

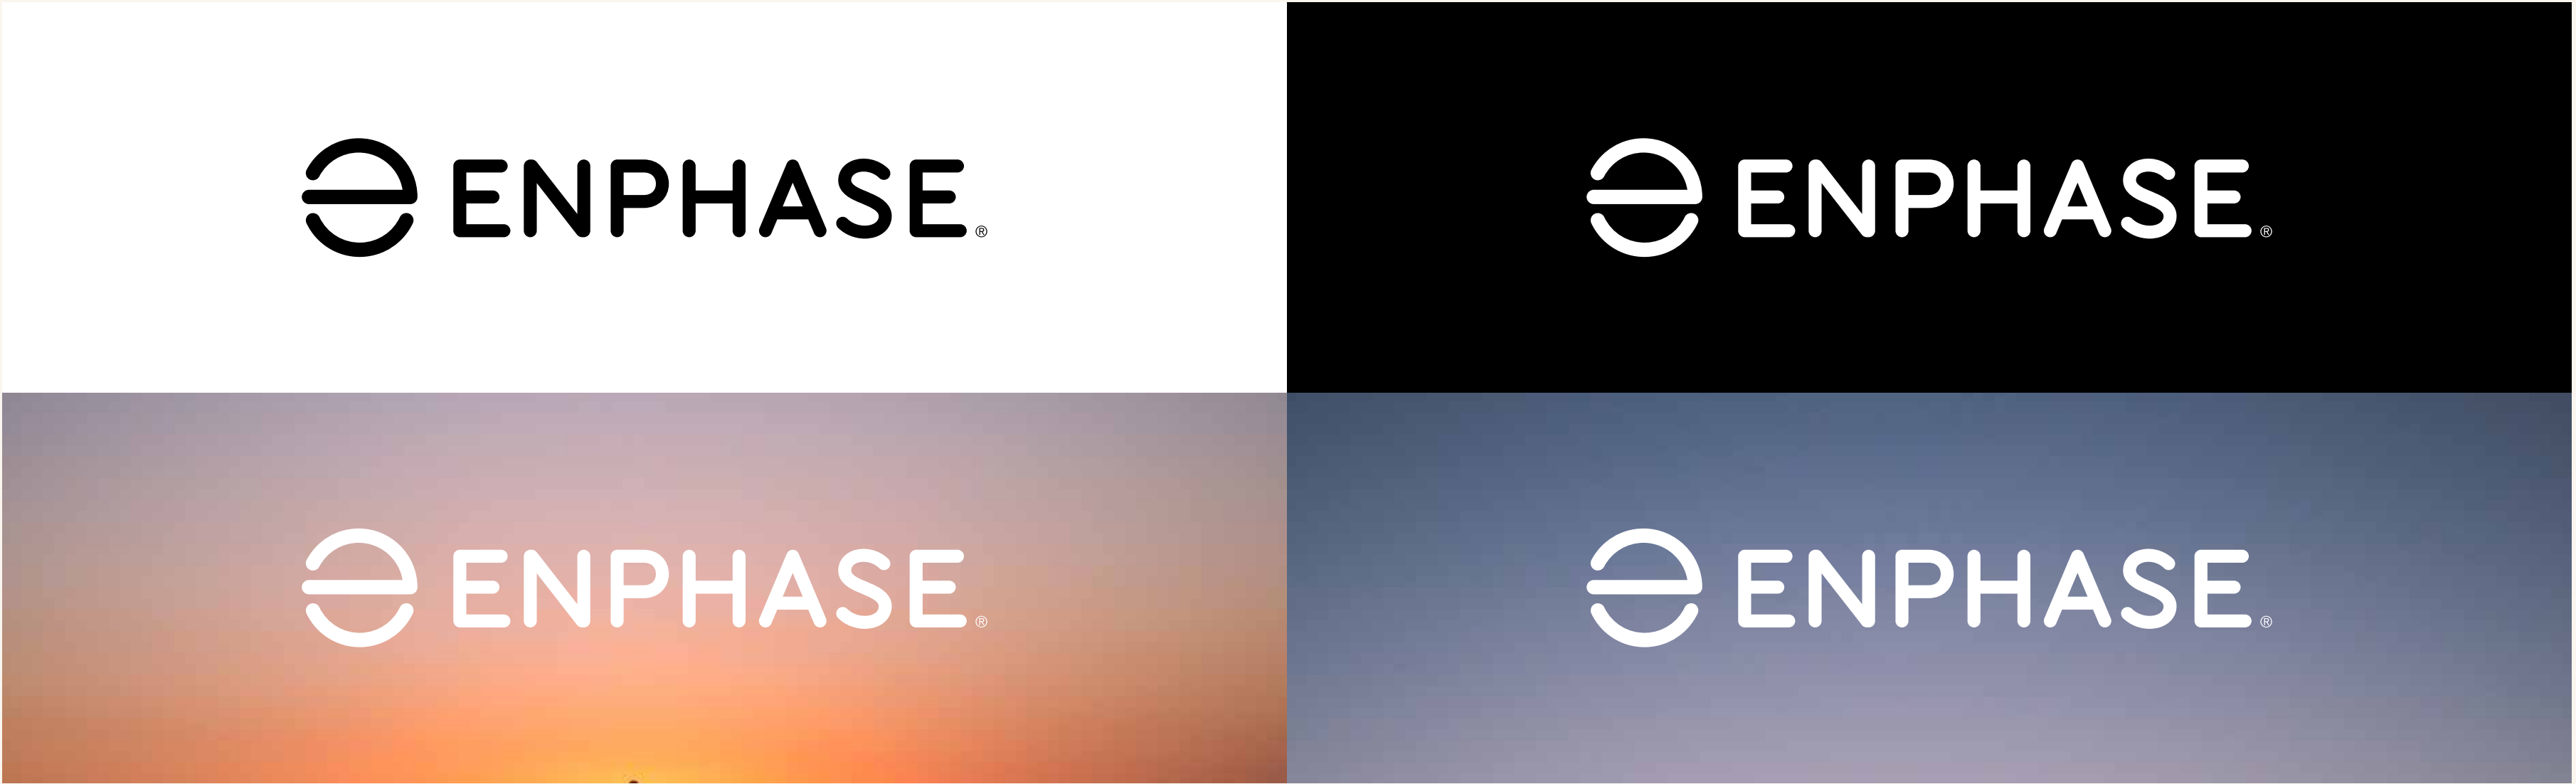

Logo color

Depending on the background the wordmark can appear in either black or white. It is important to ensure proper contrast between the Logo mark and the background.

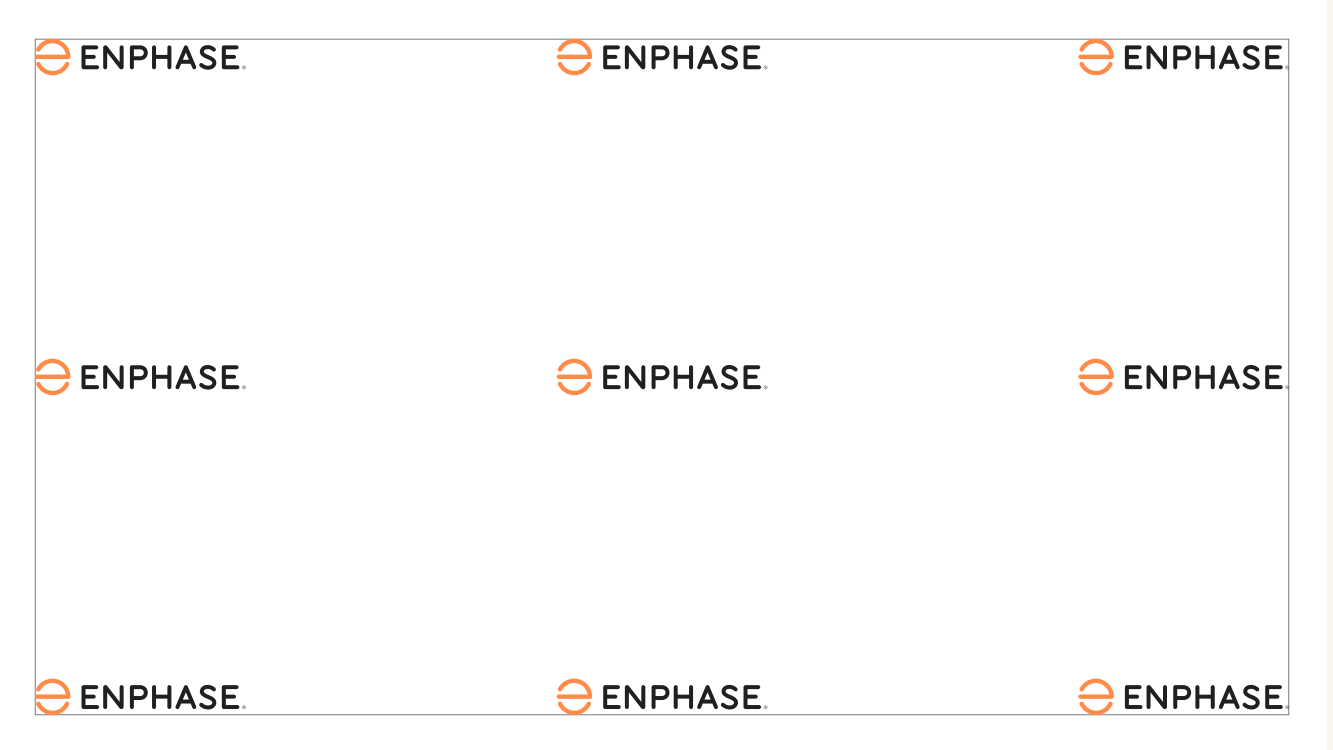

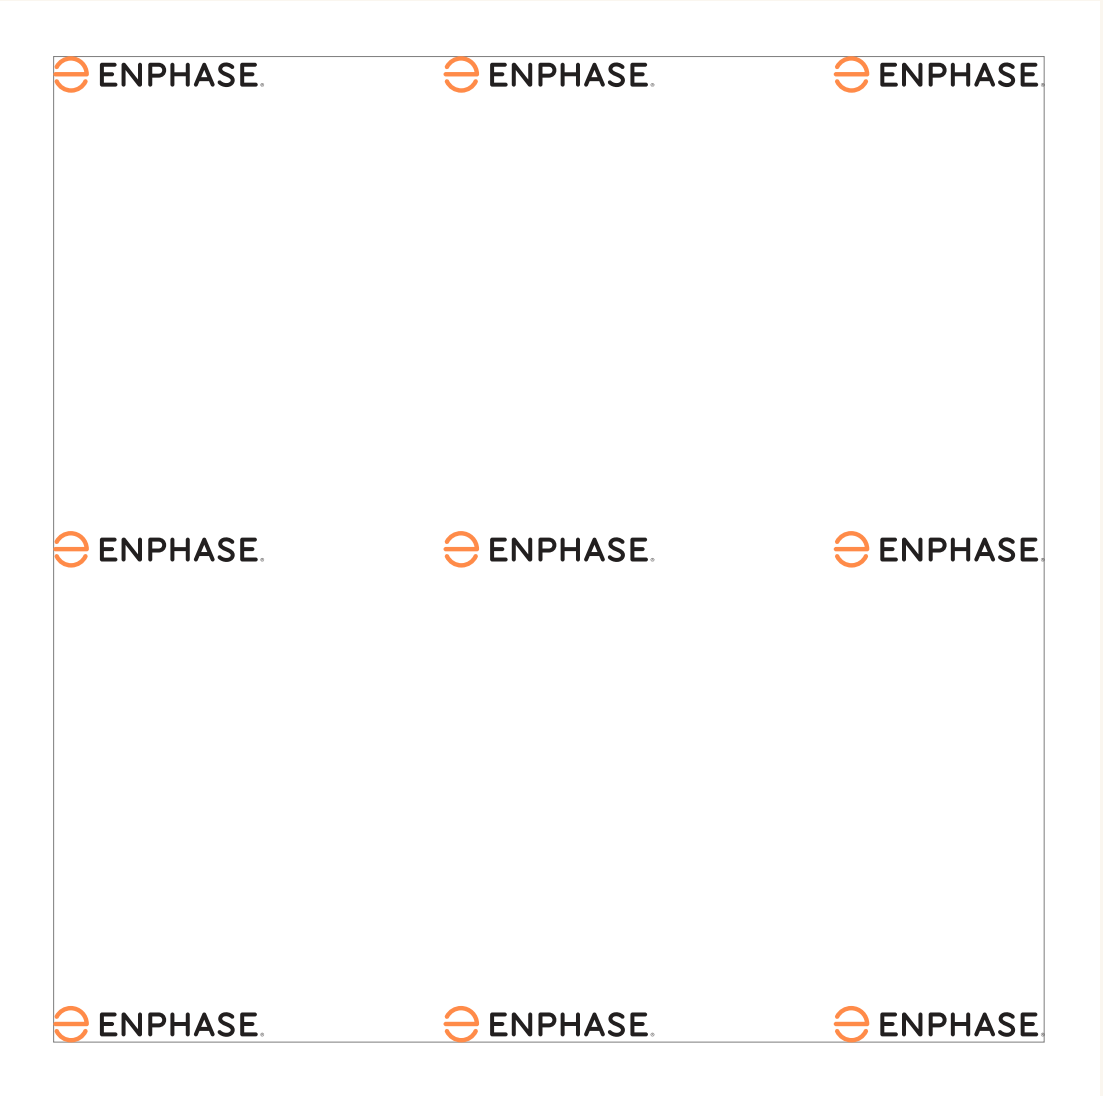

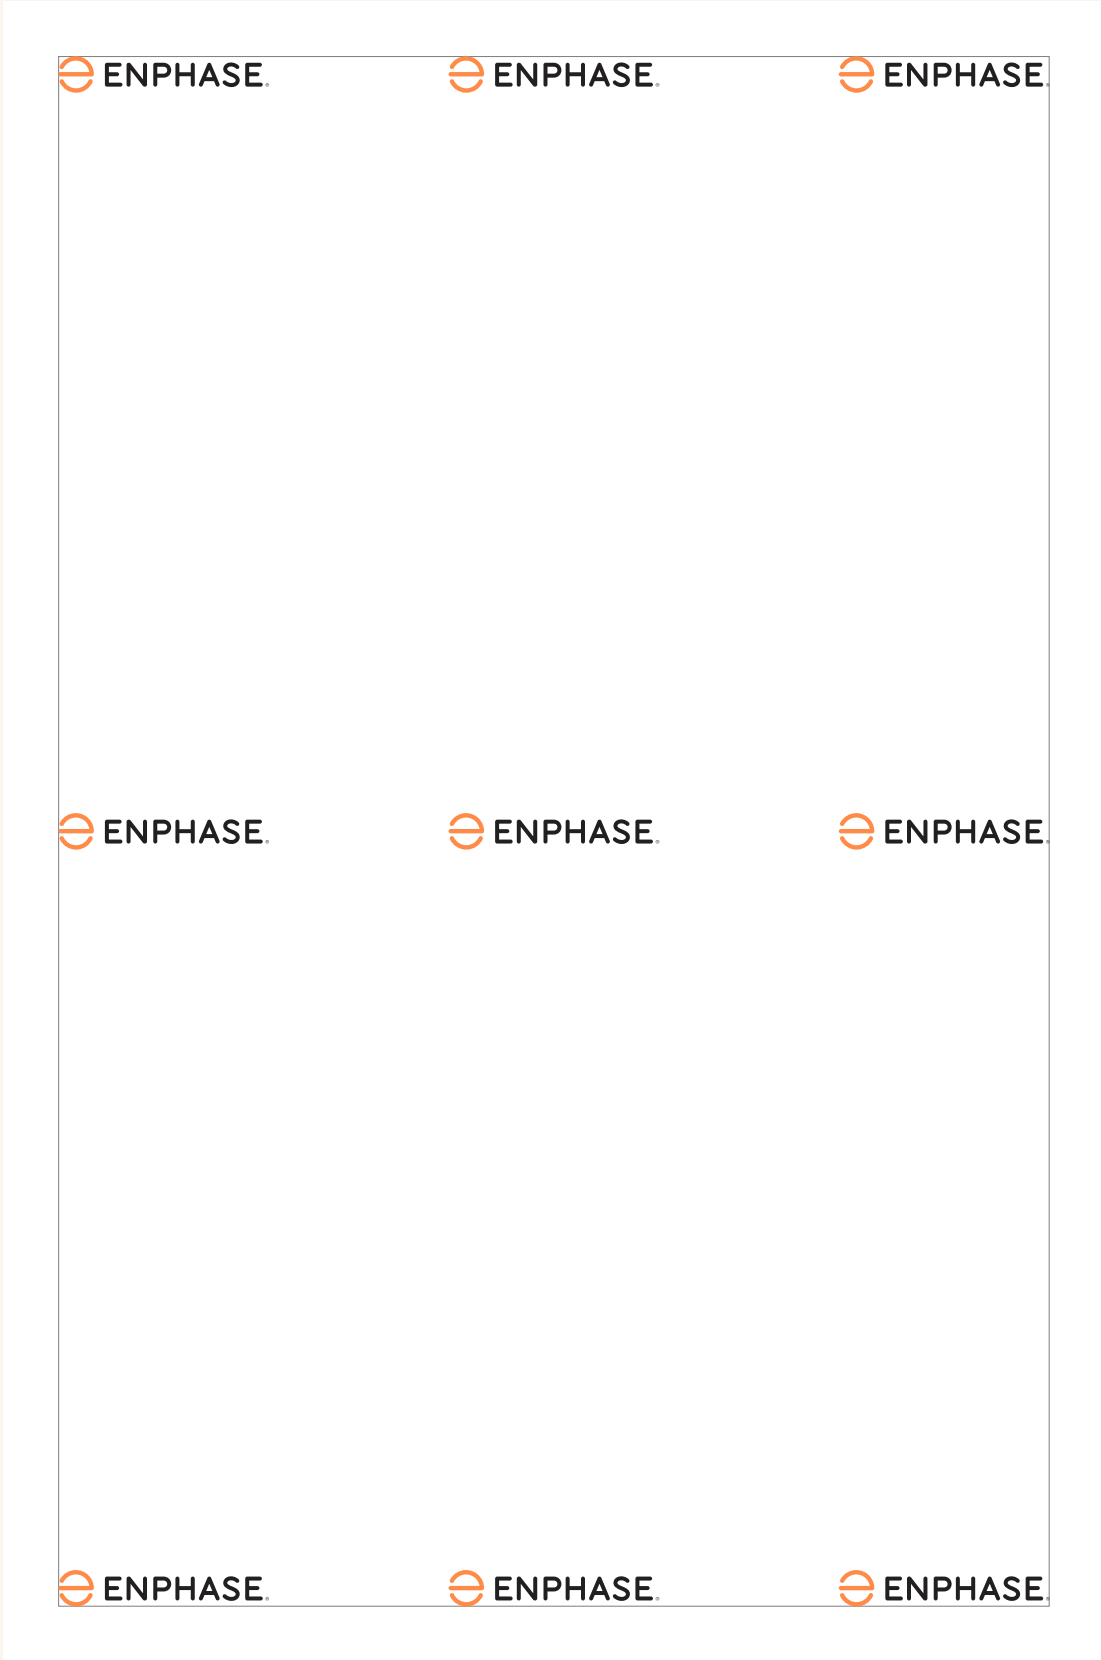

Single color applications

Some applications won't allow for multi-color reproduction. In these instances we use the logo in either black or white. In instances when the logo lockup is overlaying imagery the white logo is preferred.

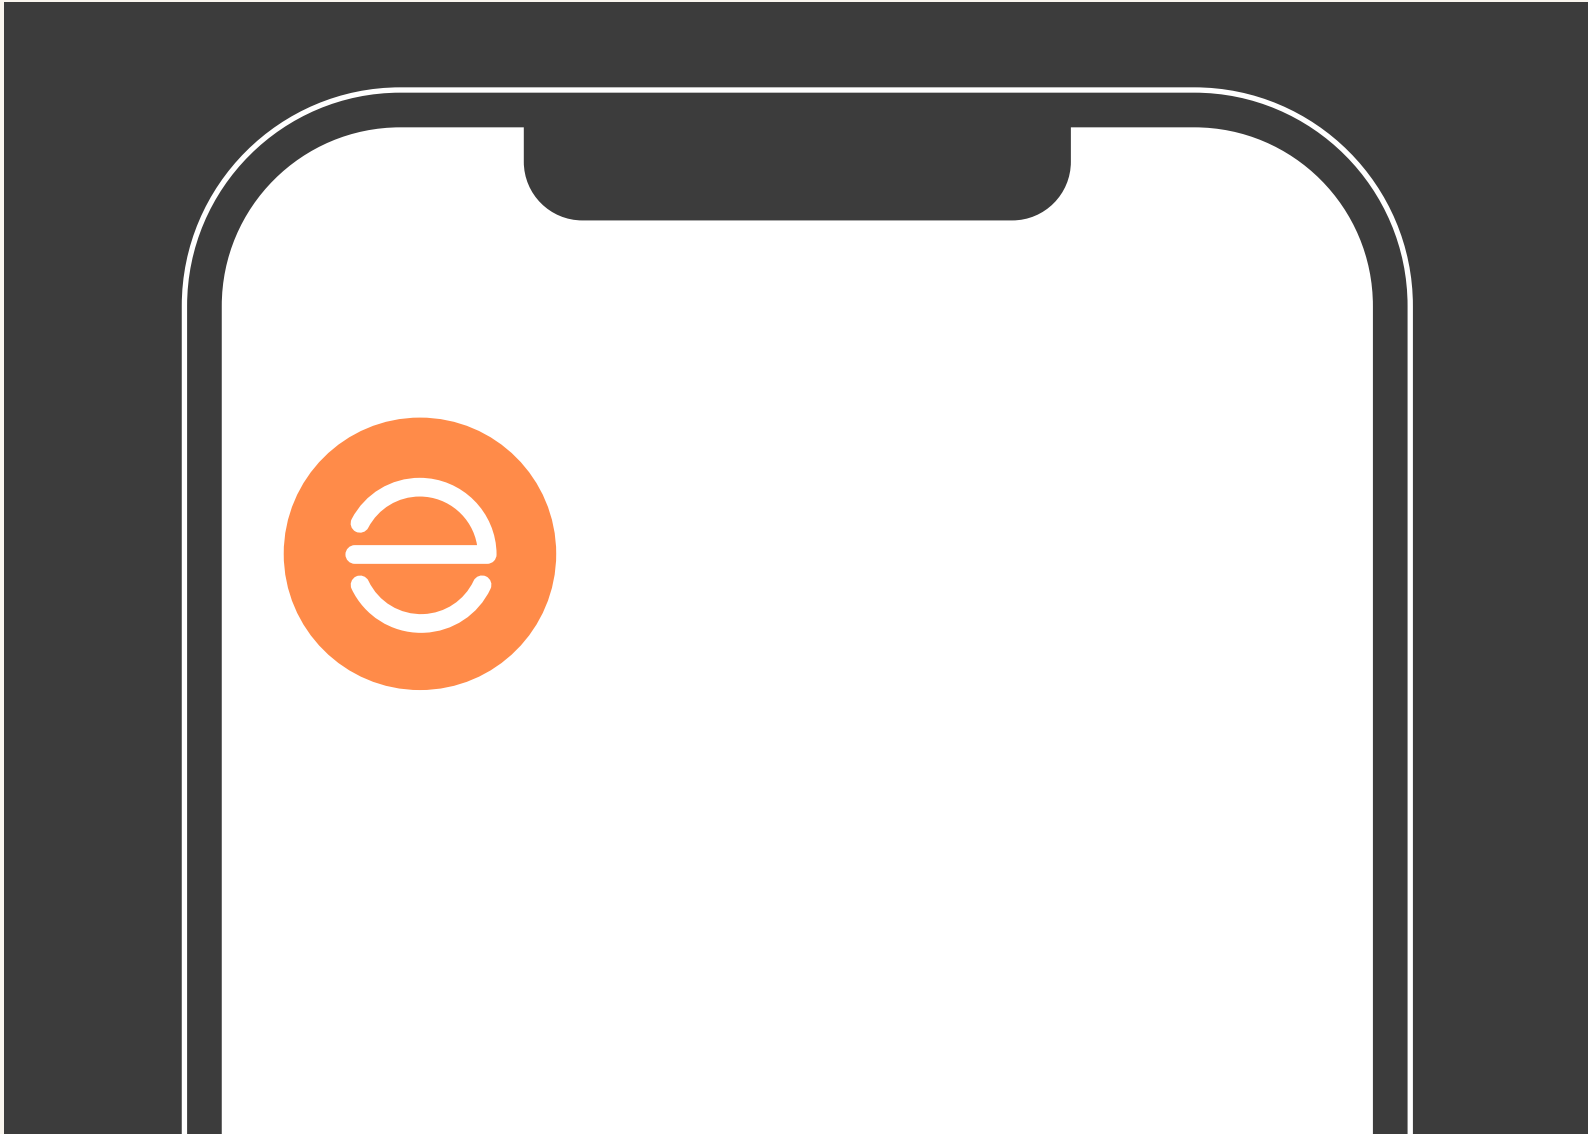

Logo placement

Regardless of communication size or dimension, the Enphase logo can be placed in nine locations. This keeps logo placement simple and consistent, while allowing enough flexibility to accommodate our graphic system.

Logo mark usage

There are circumstances when the Logo mark can be separated from the logo lockup. These should be reserved for examples where the Logo mark can appear in close proximity to the full logo lockup or as social avatars.

Logo
Misuse

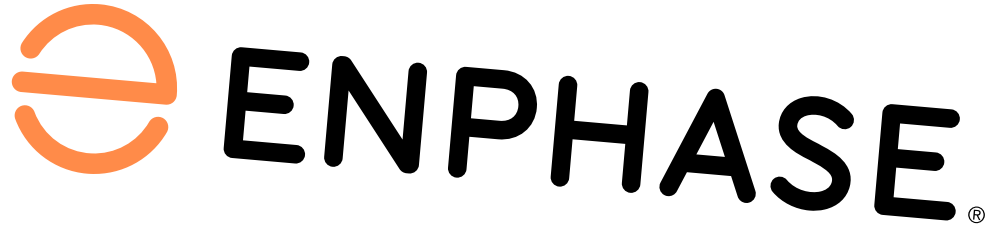

⛔ Don't color the wordmark in colors other than black or white

⛔ Don't invert the colors of the logo

⛔ Don't apply gradients to the logo

⛔ Don't rotate the logo

⛔ Don't outline the logo

⛔ Don't re align the symbol and wordmark

Color

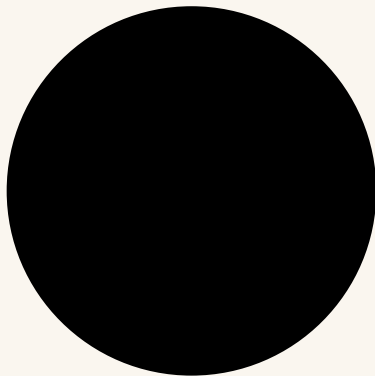

Color

As light changes temperature throughout the day it can make rooms feel warmer. The shadows and highlights are warmer neutrals that are more inviting than a standard bright white and cold gray that we associate with technology products.

Neutrals

Our palette of neutrals is inspired by the warmth of sunlight on a white wall. This palette helps establish a warm and soothing tone.

Neutrals

accessibility

When applying neutral colors to typography, it is important that sufficient contrast is achieved to maintain legibility. The Web Content Accessibility Guidelines (WCAG) set specific ratios that achieve the minimum required contrast for legibility. Checking that two colors are accessible may be done through a contrast checker which follows these guidelines.

Shown opposite are which neutral colors may be used to pass accessibility guidelines.

*Only accessible for large text and graphic (18px minimum font size for accessibility compliance)

Gradients

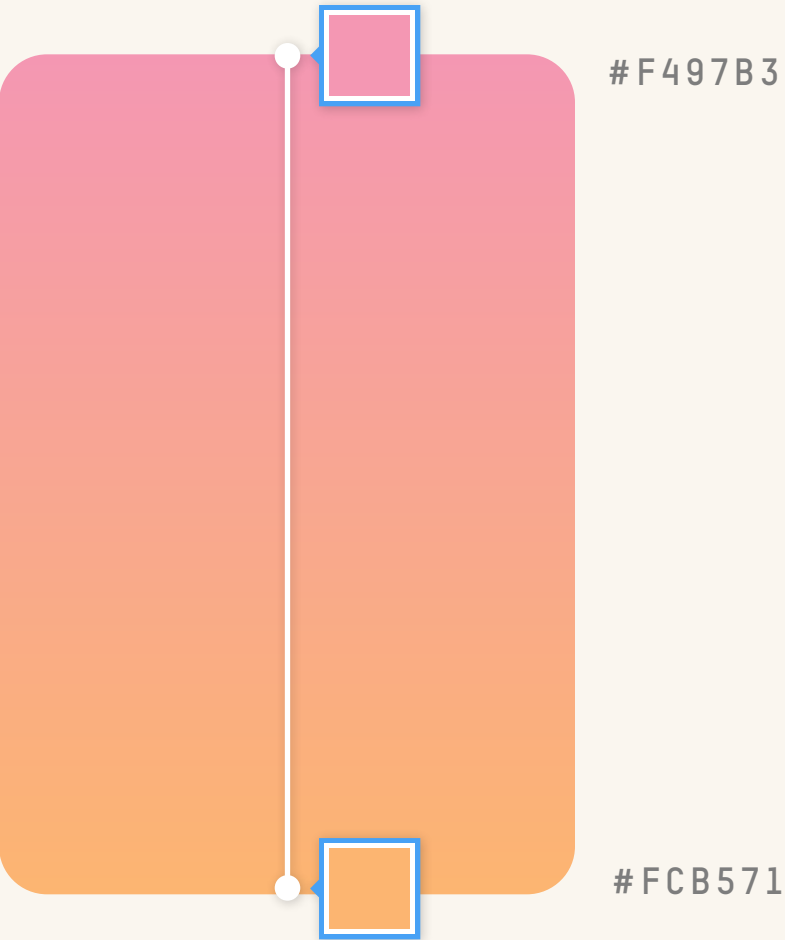

We use several gradients to evoke a sense of light traveling through an environment. Each gradient takes a cue from the sun’s position in the sky at different times of day.

Our **brand gradient** is used most within Enphase communications. Examples of where our brand gradient may appear are as a background element on applications and within backdrops of product images or illustrations.

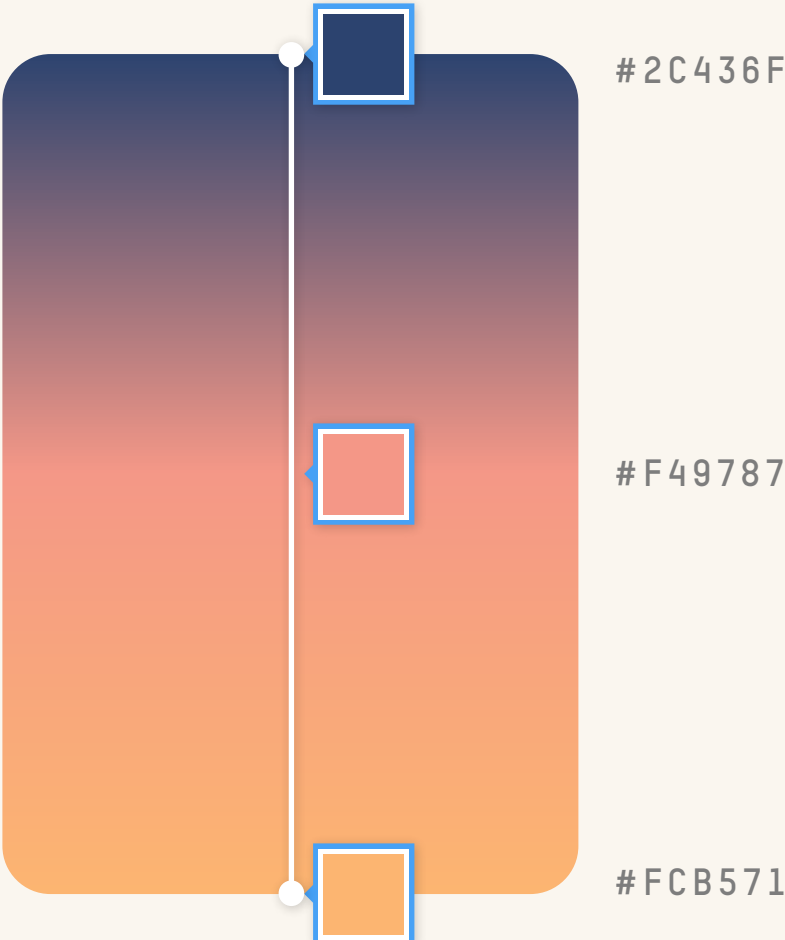

In addition to our brand gradient, we also use **spotlight gradients, a sunrise gradient and a sunset gradient**. These colors should be reserved for moments within user interfaces and backdrops for illustrations.

All gradient end-to-end points are fixed to the container height and run in a 90° vertical orientation.

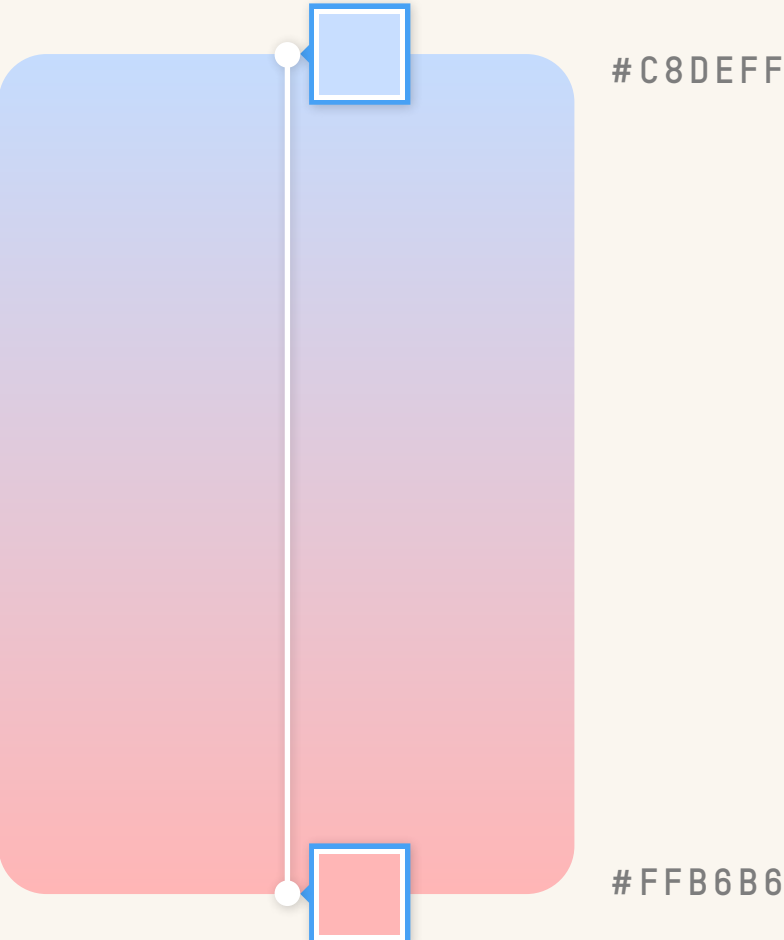

BRAND GRADIENT

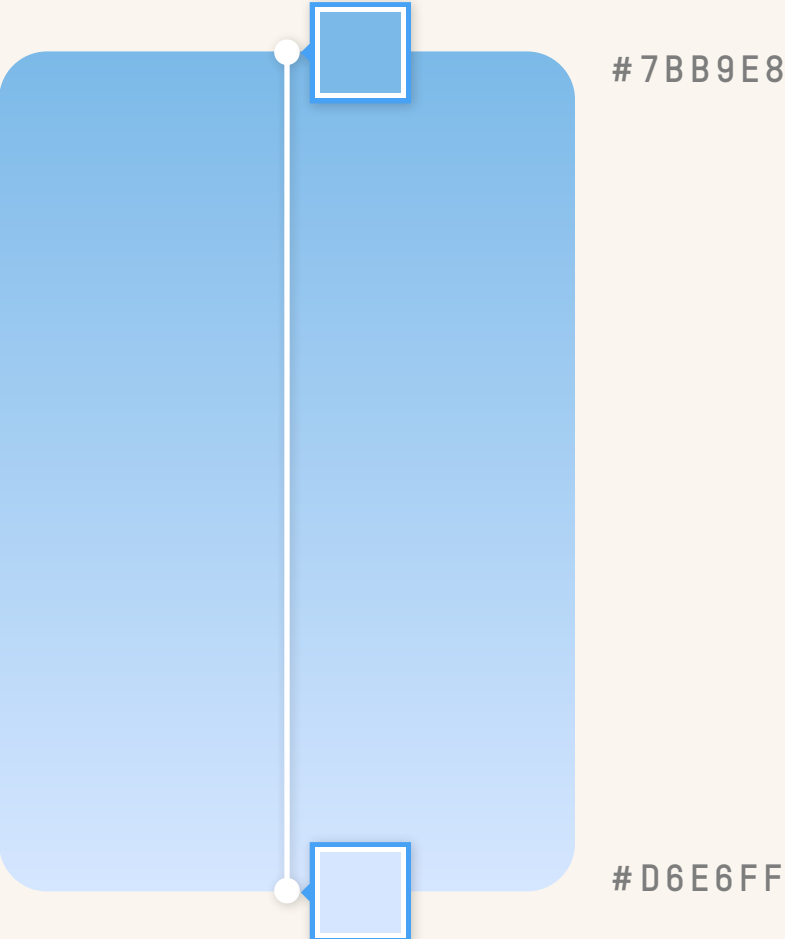

SUNRISE GRADIENT

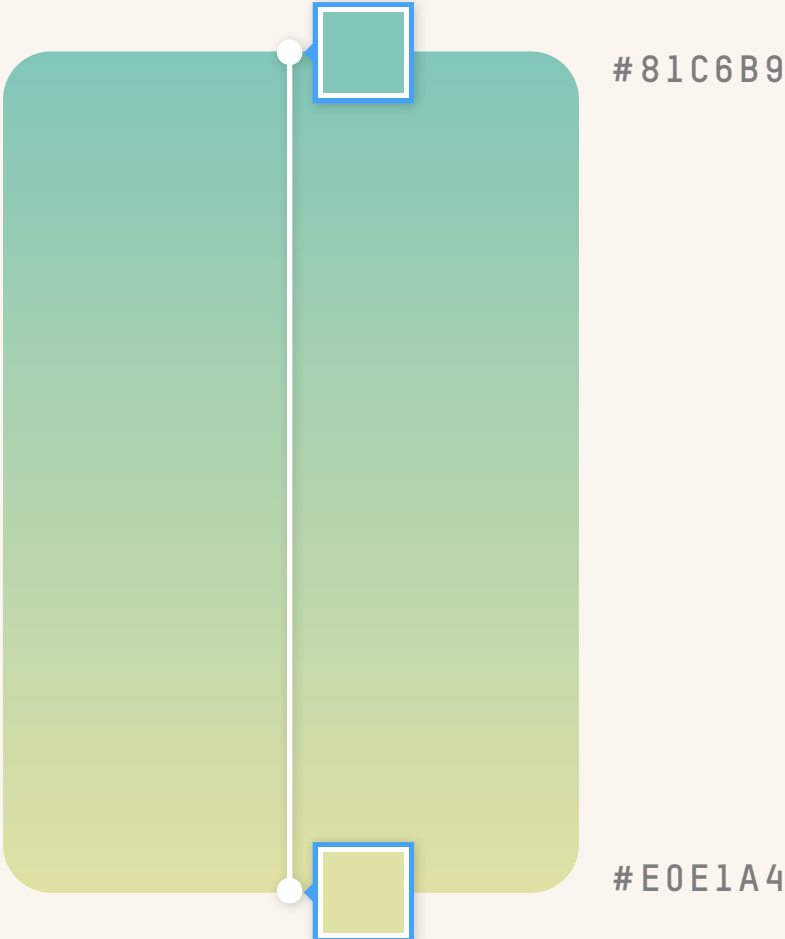

SUNSET GRADIENT

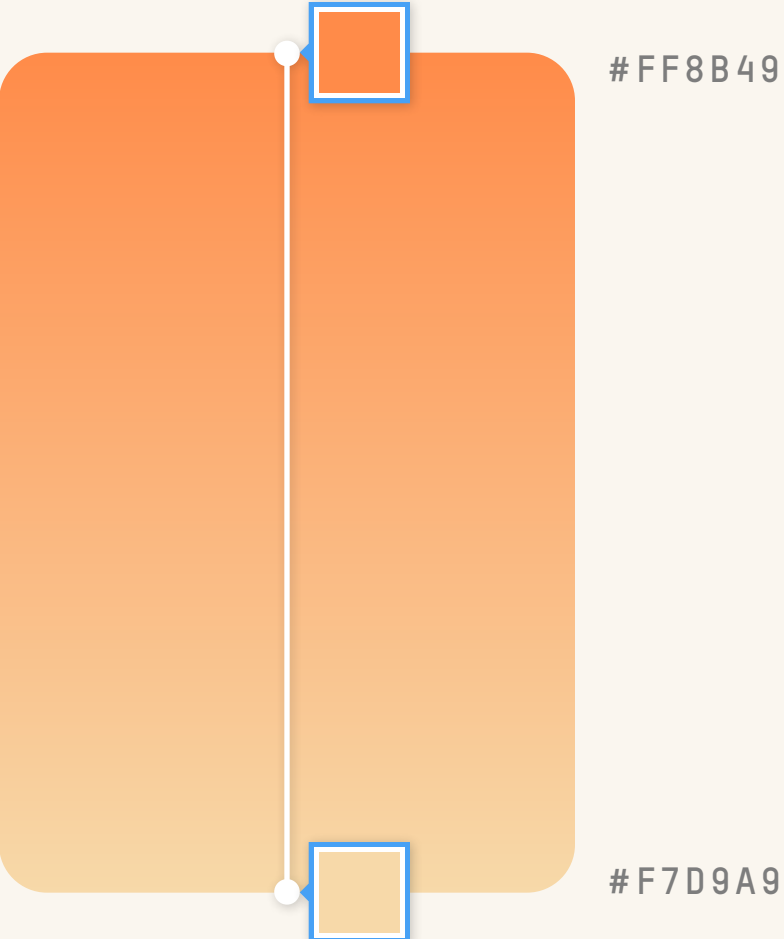

SPOTLIGHT BLUE

SPOTLIGHT GREEN

SPOTLIGHT ORANGE

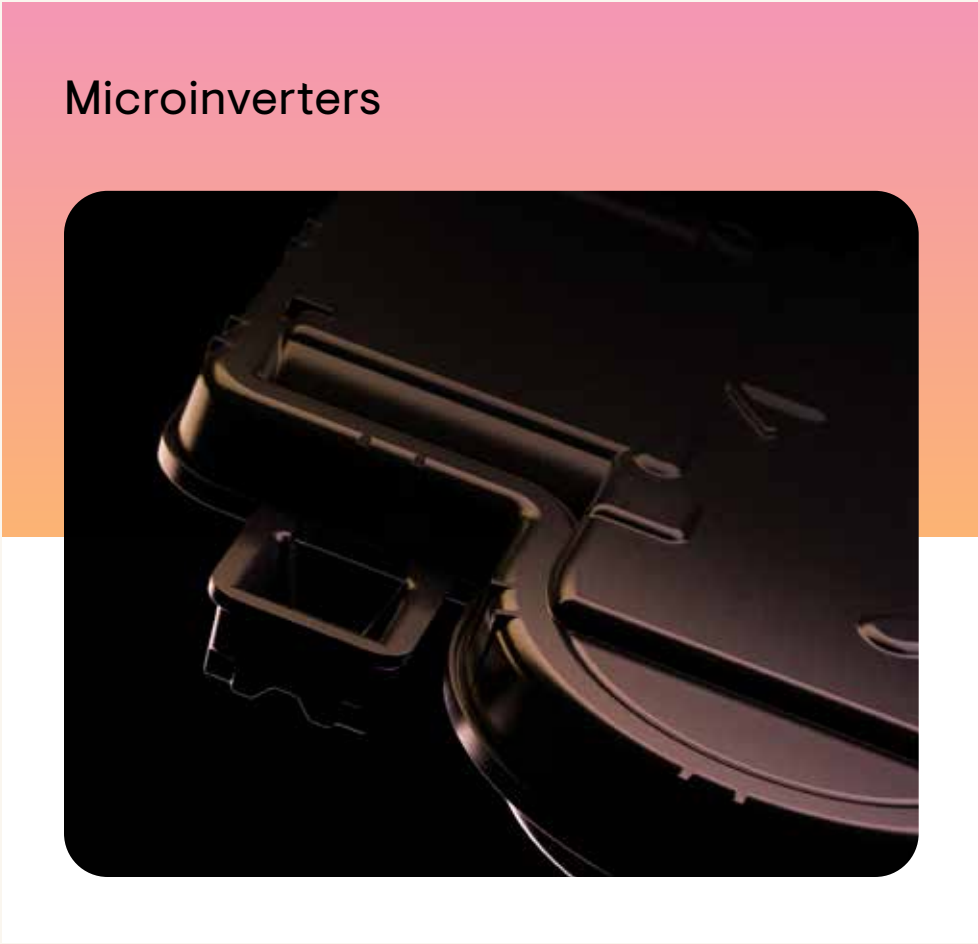

Gradients in use

Our brand gradient is at its best when serving as a backdrop for other content. It can help establish depth, allowing other visual content to lift off and come forward in the two dimensional picture plane or as an environment for product imagery.

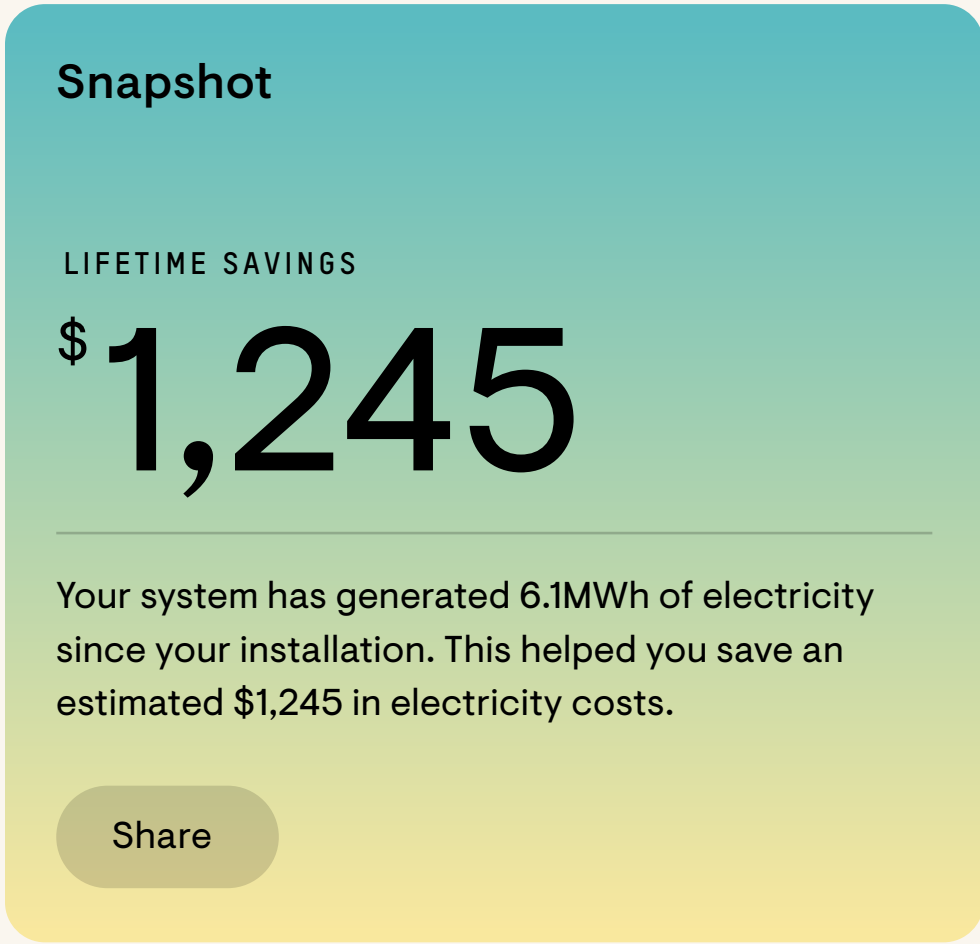

Spotlight gradients are used for functional UI within the Enphase app and as a background within illustration.

Our sunrise and sunset gradient is reserved specifically for illustration backgrounds.

BRAND GRADIENTS AS BACKGROUND

SPOTLIGHT GRADIENT IN UI

SUNRISE GRADIENT IN ILLUSTRATION

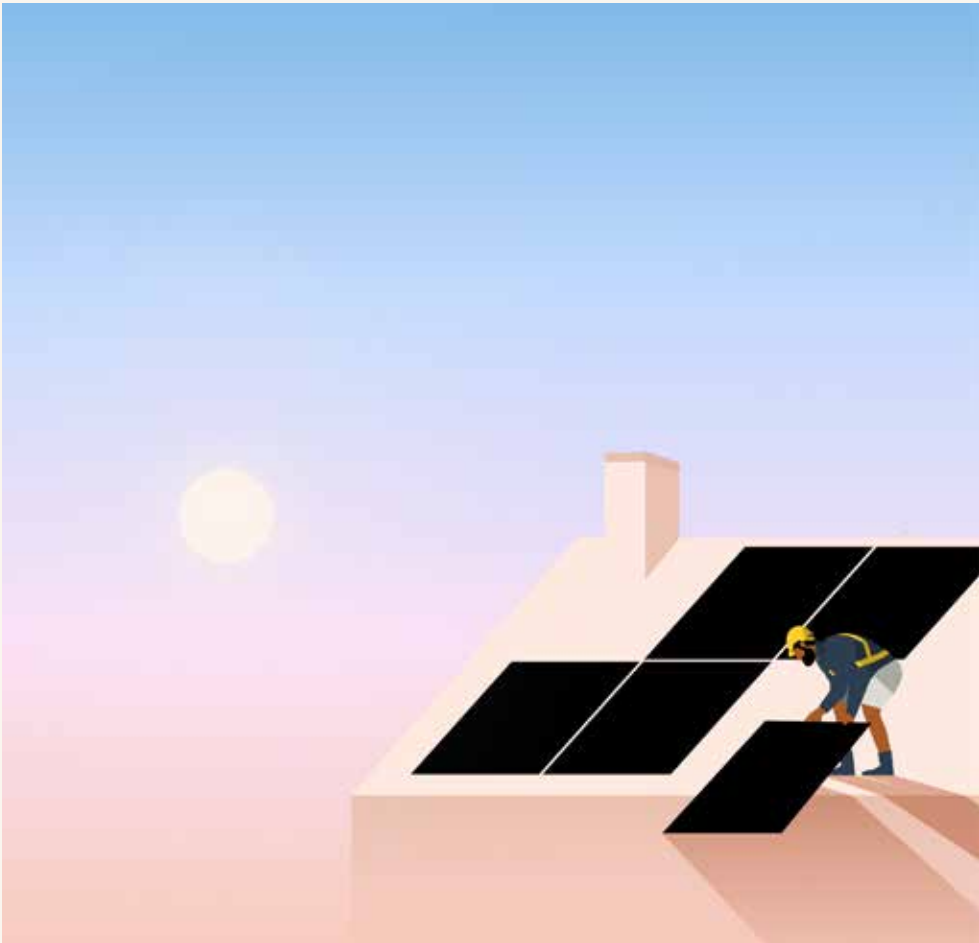

BRAND GRADIENTS IN PRODUCT IMAGERY

SPOTLIGHT GRADIENT IN ILLUSTRATION

SUNSET GRADIENT IN ILLUSTRATION

Gradients

Misuse

⛔ Don't Add multiple stops to the gradient

⛔ Don't create new gradients

⛔ Don't layer gradients

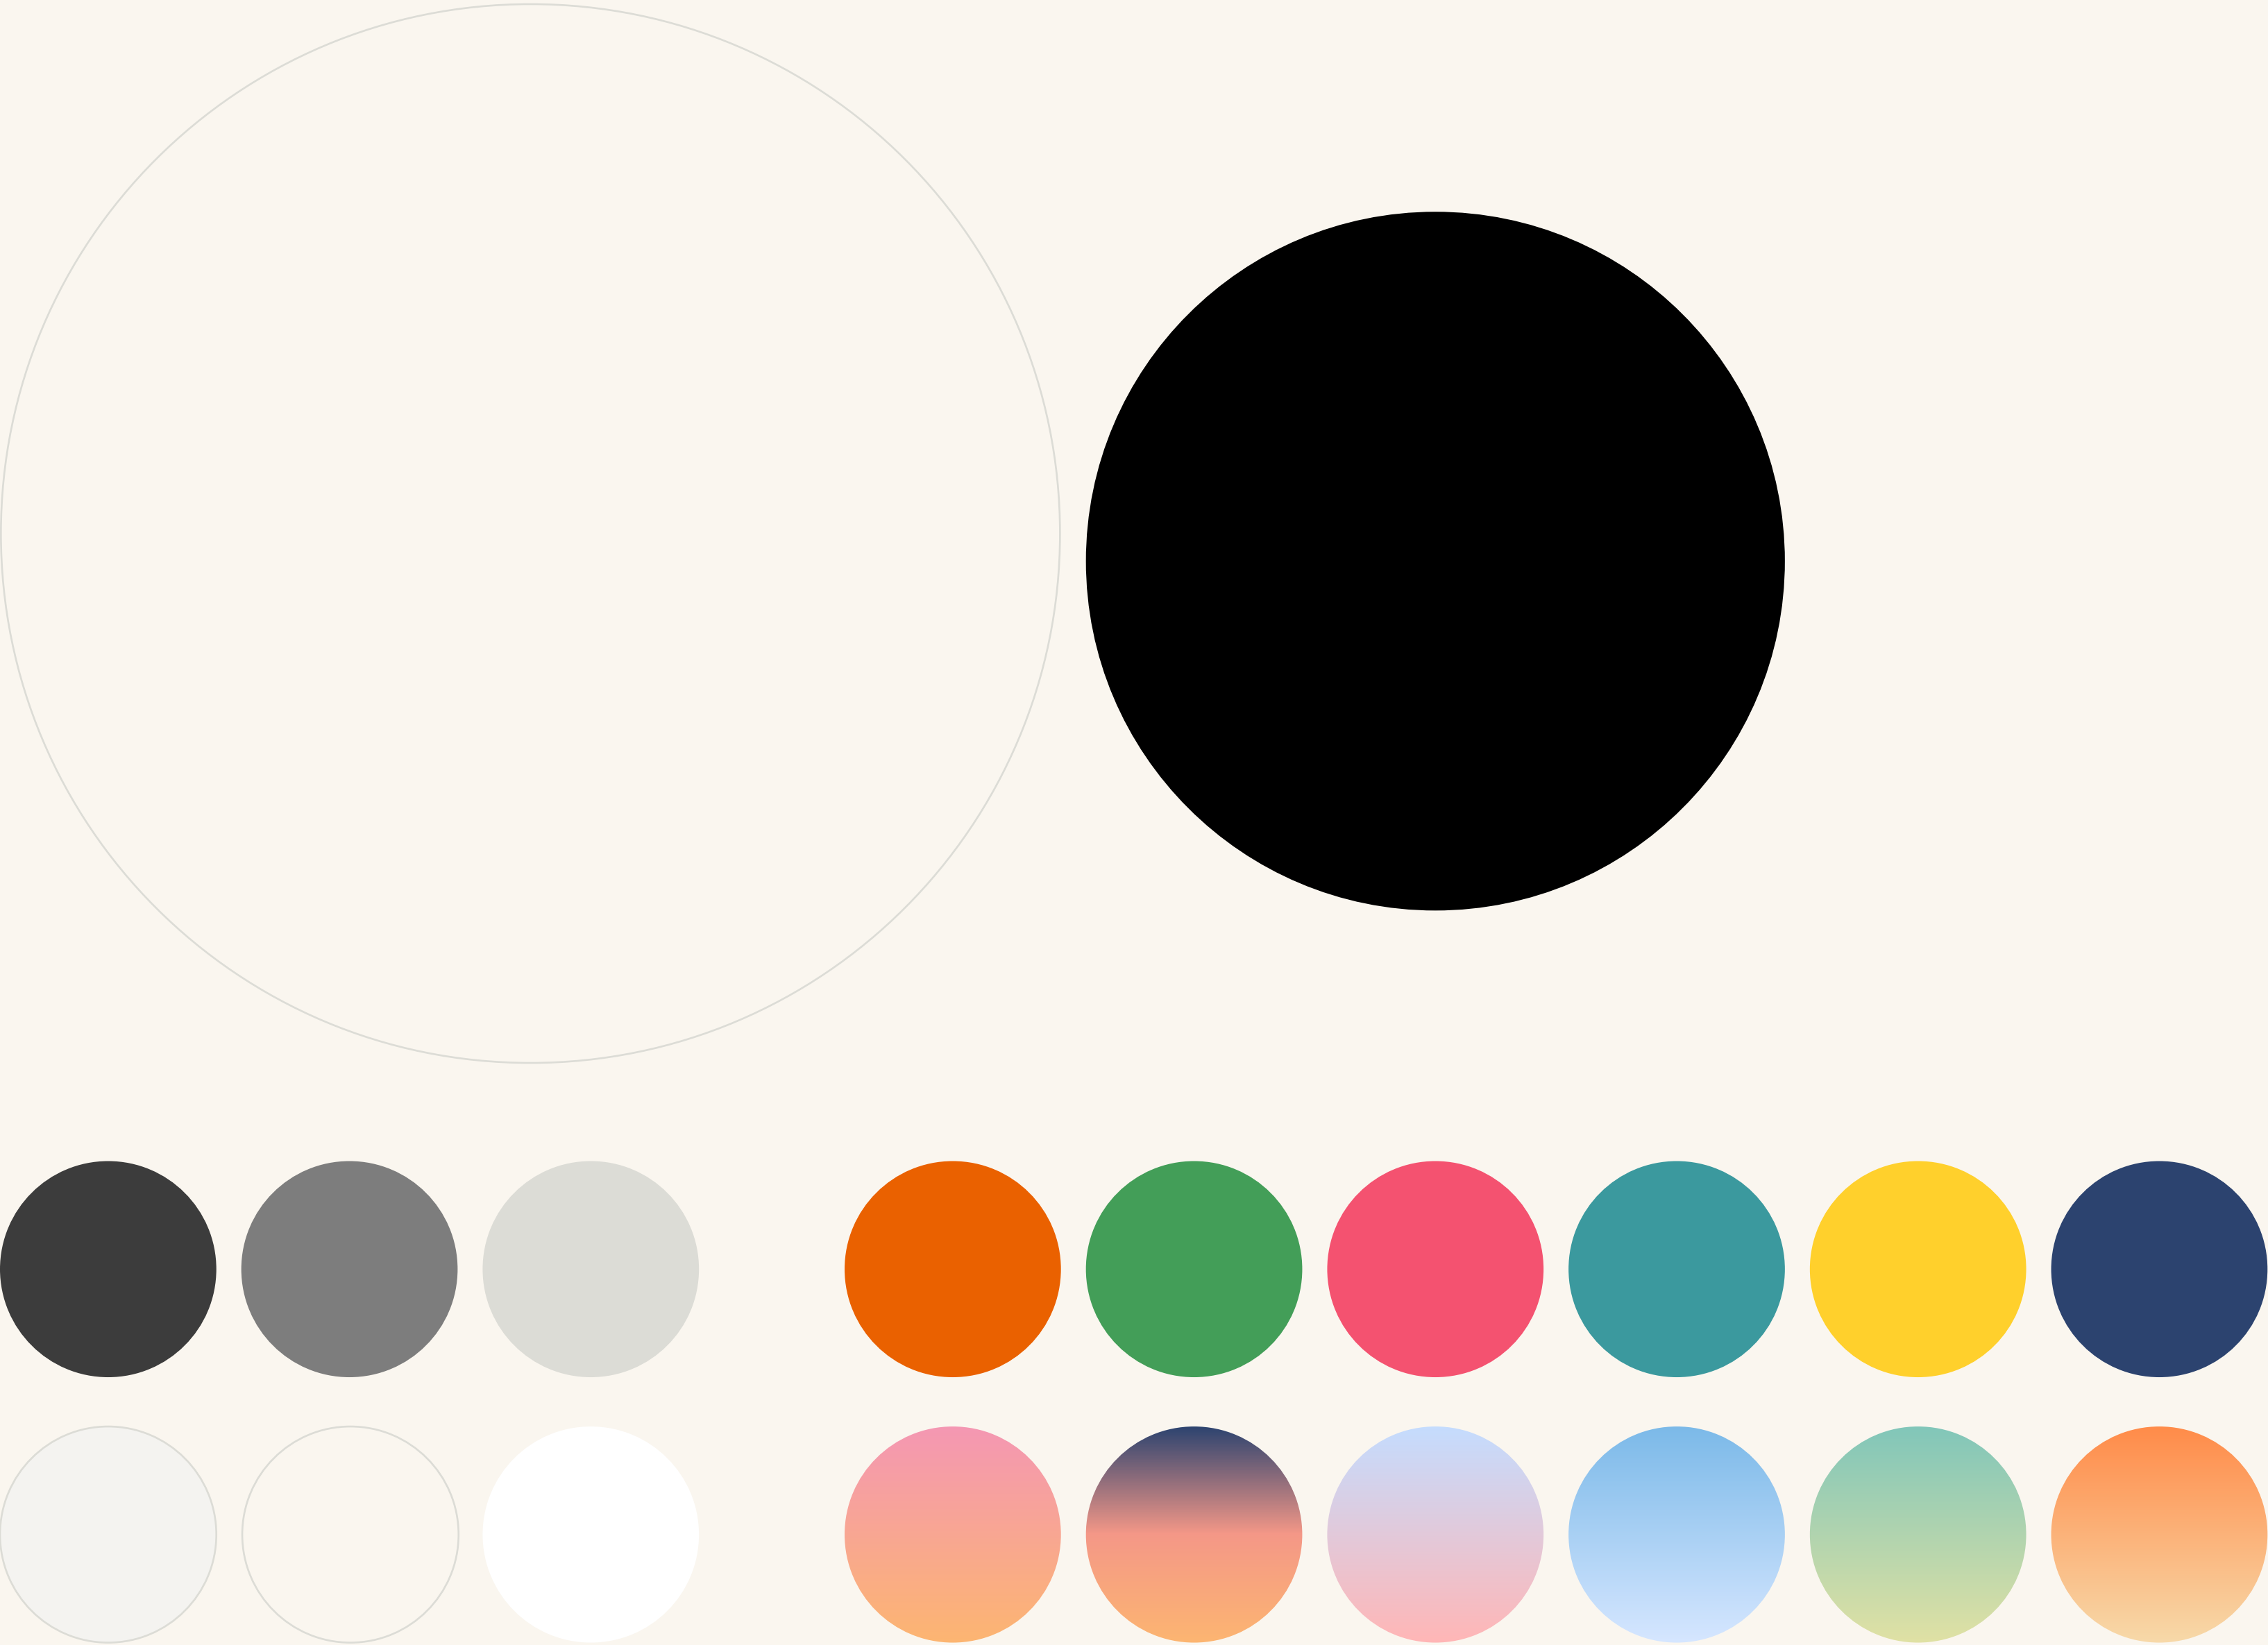

⛔ Don't Flip the gradient angle

Light theme palette usage

Our neutrals are used for backgrounds and primary text elements. Neutrals are sophisticated and allow the color and contents of our imagery to come forward.

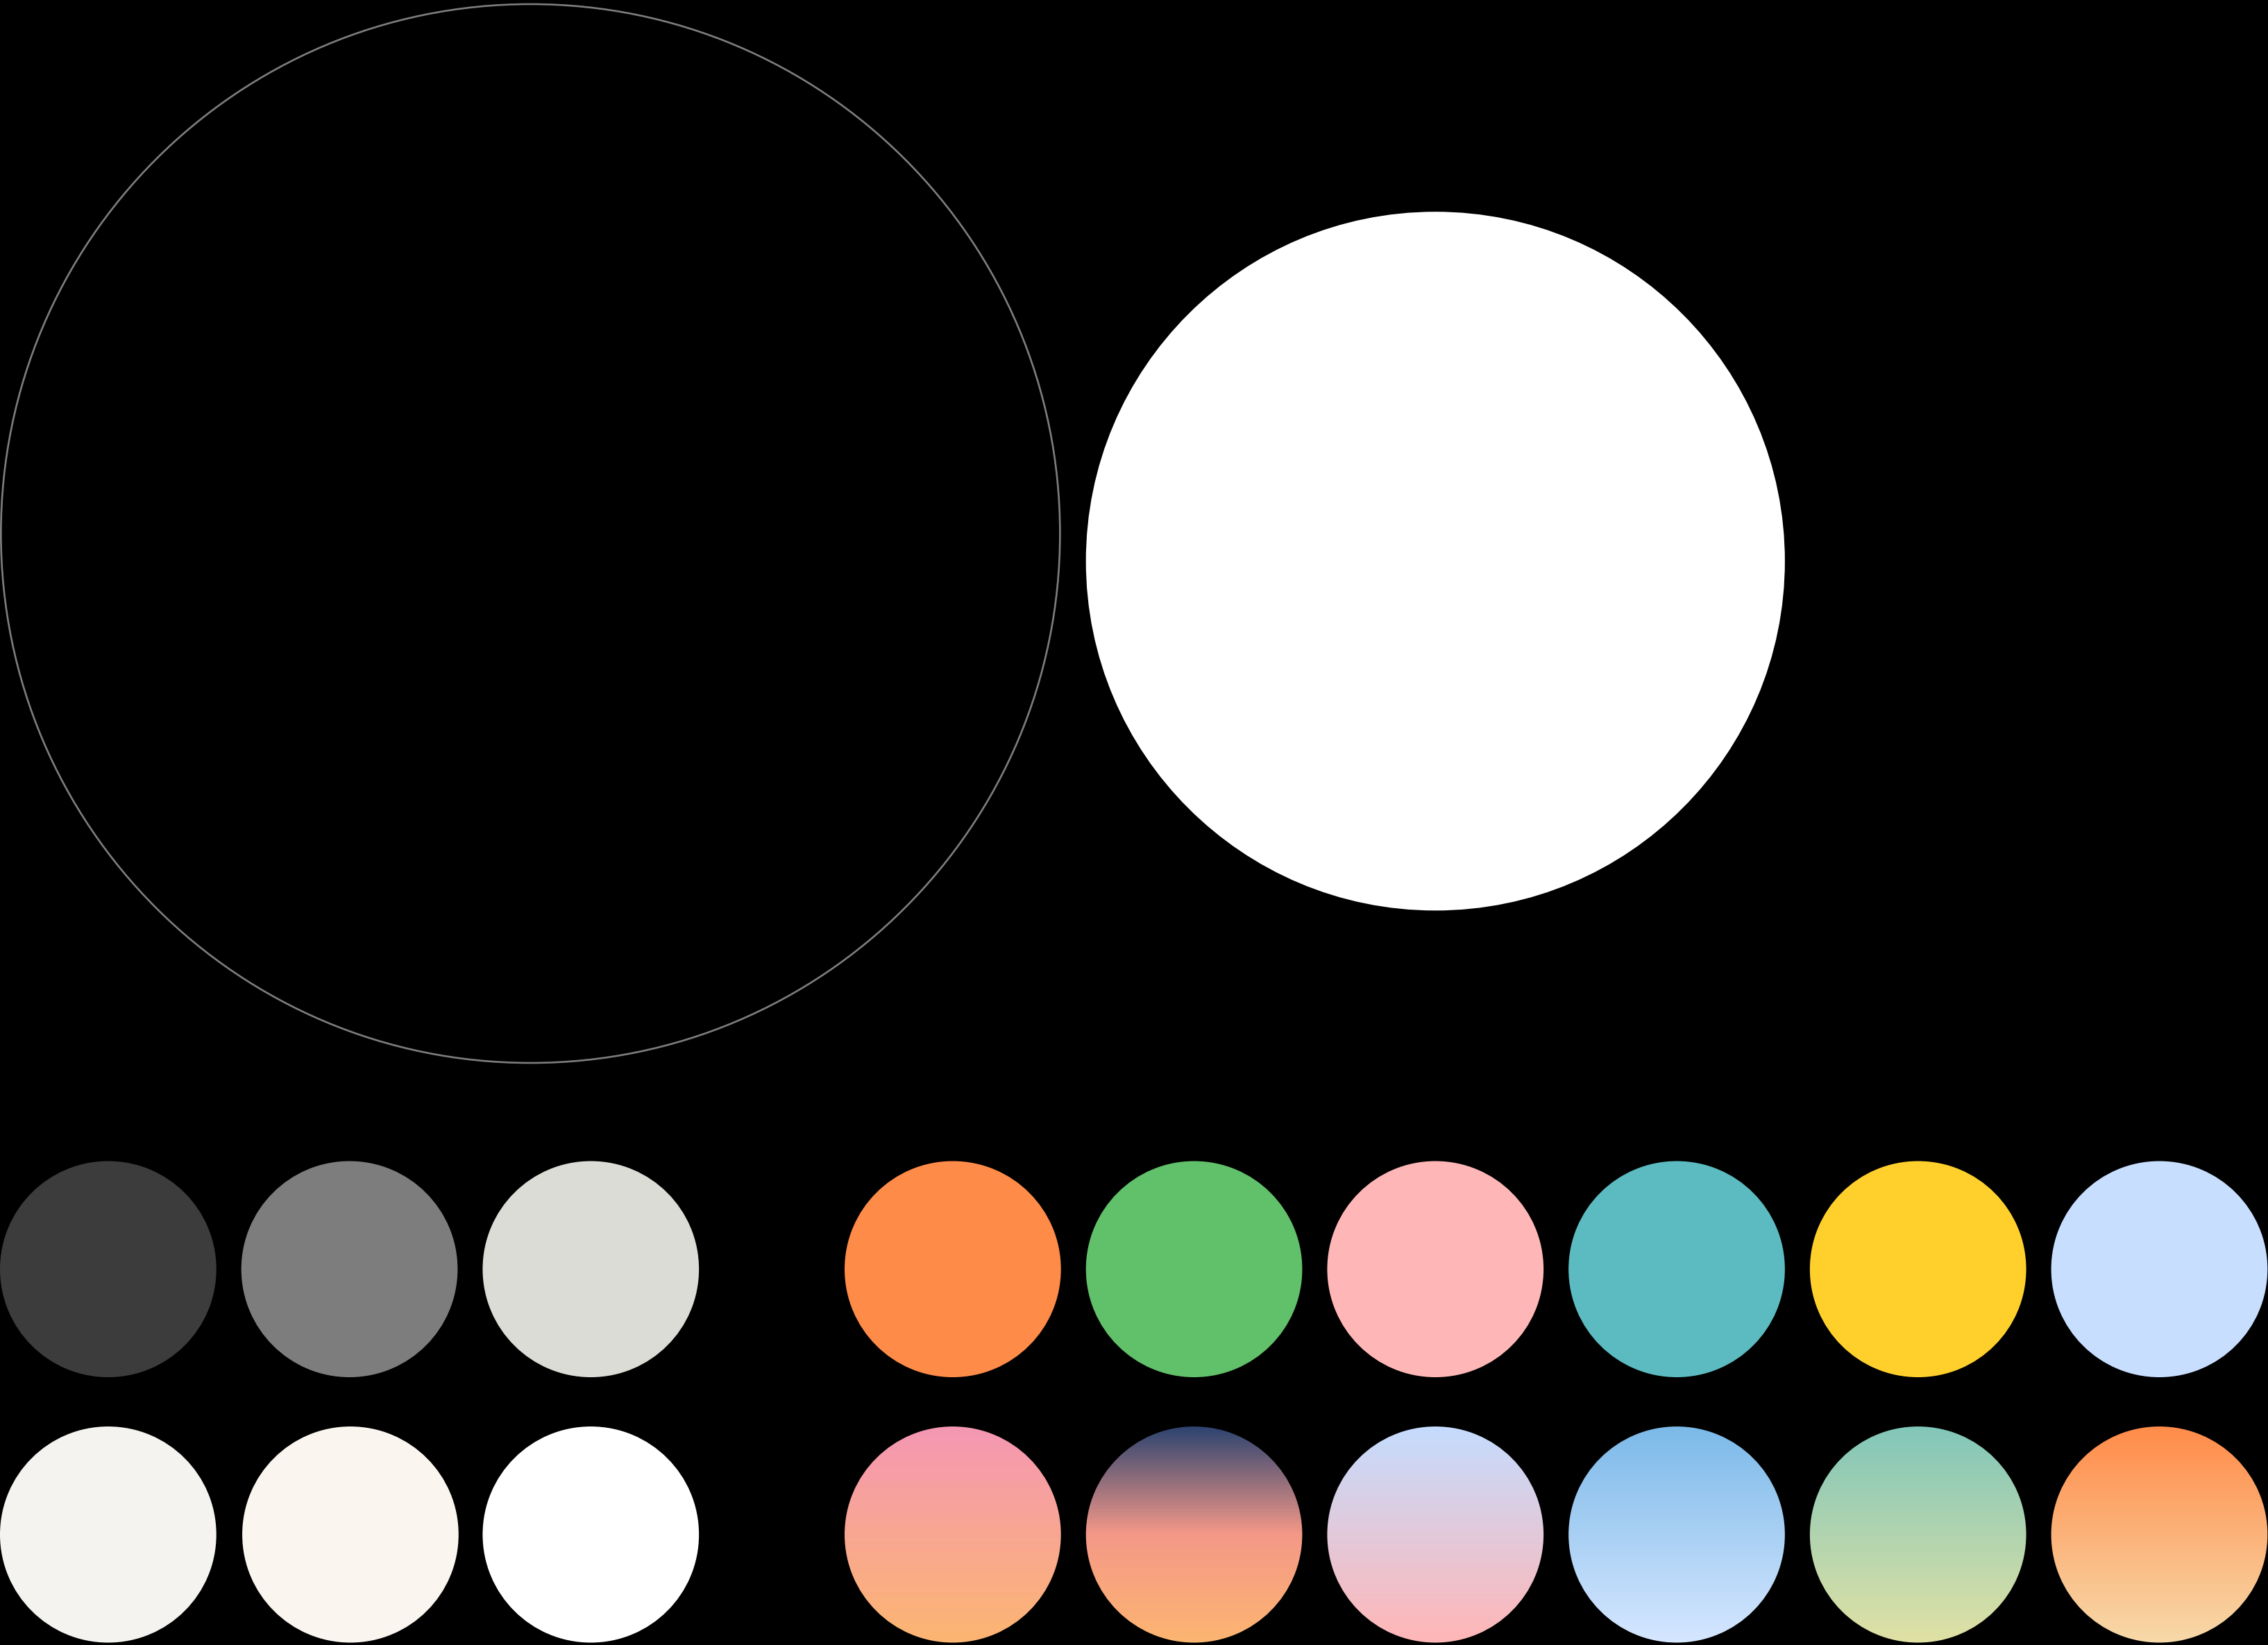

The brand colors are used for icons, headlines, UI elements, illustrations, and visual pacing.

Dark theme palette usage

Our neutrals are used for backgrounds and primary text elements. Neutrals are sophisticated and allow the color and contents of our imagery to come forward.

The brand colors are used for icons, headlines, UI elements, illustrations, and visual pacing.

Typography

Our typography

Enphase’s visual tone and voice is colored by our typography. To capture Enphase’s primary qualities, ‘friendly’, and ‘technically sophisticated’ we employ two typefaces families, Enphase Visuelt and T-Star Pro.

AaBbCc

ABCDE

Our typography

Enphase Visuelt is the primary typeface for all visual communication and should be used for most copy, including body copy, headlines, and CTAs.

For highly technical information, detailed stats, section eyebrows, and captions, Enphase uses T-Star Pro. Its shared proportions and mono-line stroke weight are reminiscent of precision instruments such as calipers, cameras, and microscopes.

PRIMARY TYPEFACE

Enphase Visuelt

ABCDEFGHIJKLMNOPQRSTUVWXYZ
abcdefghijklmnopqrstuvwxyz
0123456789

SECONDARY TYPEFACE

T-STAR PRO
ABCDEFGHIJKLMNOPQRSTUVWXYZ
0123456789

Enphase Visuelt

For the majority of headlines and body copy, we use the regular weight of Enphase Visuelt. Medium should only ever be used when we need more hierarchy or emphasis within headlines. The bold weight should only be for added hierarchy and emphasis within body copy. Following this will allow for clarity, consistency, and a strong hierarchy for all communications.

All copy set in Enphase Visuelt should appear in sentence case and never upper case.

PRIMARY TYPEFACE

Enphase
Visuelt

T-Star Pro

Misuse

⊘ Don't Use T-Star Pro for headlines or extended copy

⊘ Don't Use T-Star Pro for body copy

⊘ Don't mix multiple sizes of t-star in a single piece of collateral.

Typesetting

When setting headlines Visuelt Regular often needs to be a tracked in a few units depending on the type size anywhere between -8 and -20 units.

Subheads should be set in Visuelt Medium to create even texture with the larger Visuelt Regular, depending on the size some additional tracking might be necessary.

Body copy should always be Visuelt Regular and depending on the type size could benefit from a bit of extra letter spacing between 8 and 20 units depending on the size.

T-Star Pro should always be set in all caps with 150 units of letter spacing and leading at 1.5x the type size.

HERO HEADLINE

Enphase Visuelt Regular
84pt Leading: 100%
Tracking: -8 to -20

HERO SUB-HEAD

Visuelt Medium 32pt
Leading: 36pt
Tracking: +4

BODY

Body copy should be set in Visuelt Regular between 14 and 24 pt. With leading between 110–140% of the type size, depending on the reading environment. Visuelt will benefit from a touch of extra letter spacing between 8 and 20 units depending on the type size. **Bold should be used for emphasis in body sizes.**

CAPTIONS/

Icons

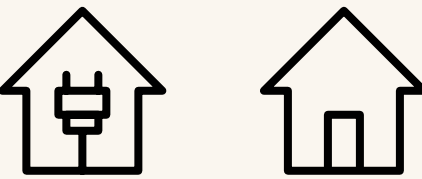

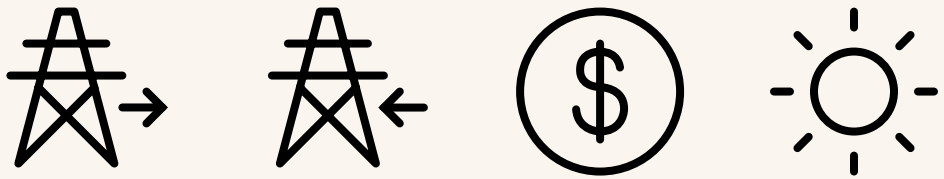

Grid

Product icons should be constructed on a 24 x 24 unit grid with a 1 unit line weight.

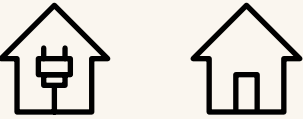

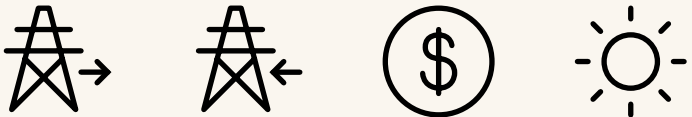

As a baseline rule we use rounded corners and terminals so the icons feel friendly and approachable, even at small sizes.

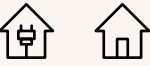

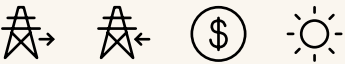

300%

200%

100%

Lifestyle Photography

Lifestyle photography

Our photography inspires our audience about the power of clean energy use. Clarification of how everything works is unnecessary. We build on the emotional payoff that our users feel when they make, use, save, and own their power.

Everyday moments

Our lifestyle images should highlight the wide variety of daily activities that we rely on power for. Images should showcase a variety of homes and families in an optimistic way. Illumination and light plays an important role in telling the story of Enphase, whether it's a space illuminated by electric lights, or dramatic rays of sunlight that creates a sense of warmth and comfort.

Outdoors

Our outdoor photography should provide an inspiring look at the experience of using our products away from home. Long exposure photography to capture starlight or dawn or dusk images can capture a sense of adventure without being too intimidating to the novice adventurer.

Inspirational imagery

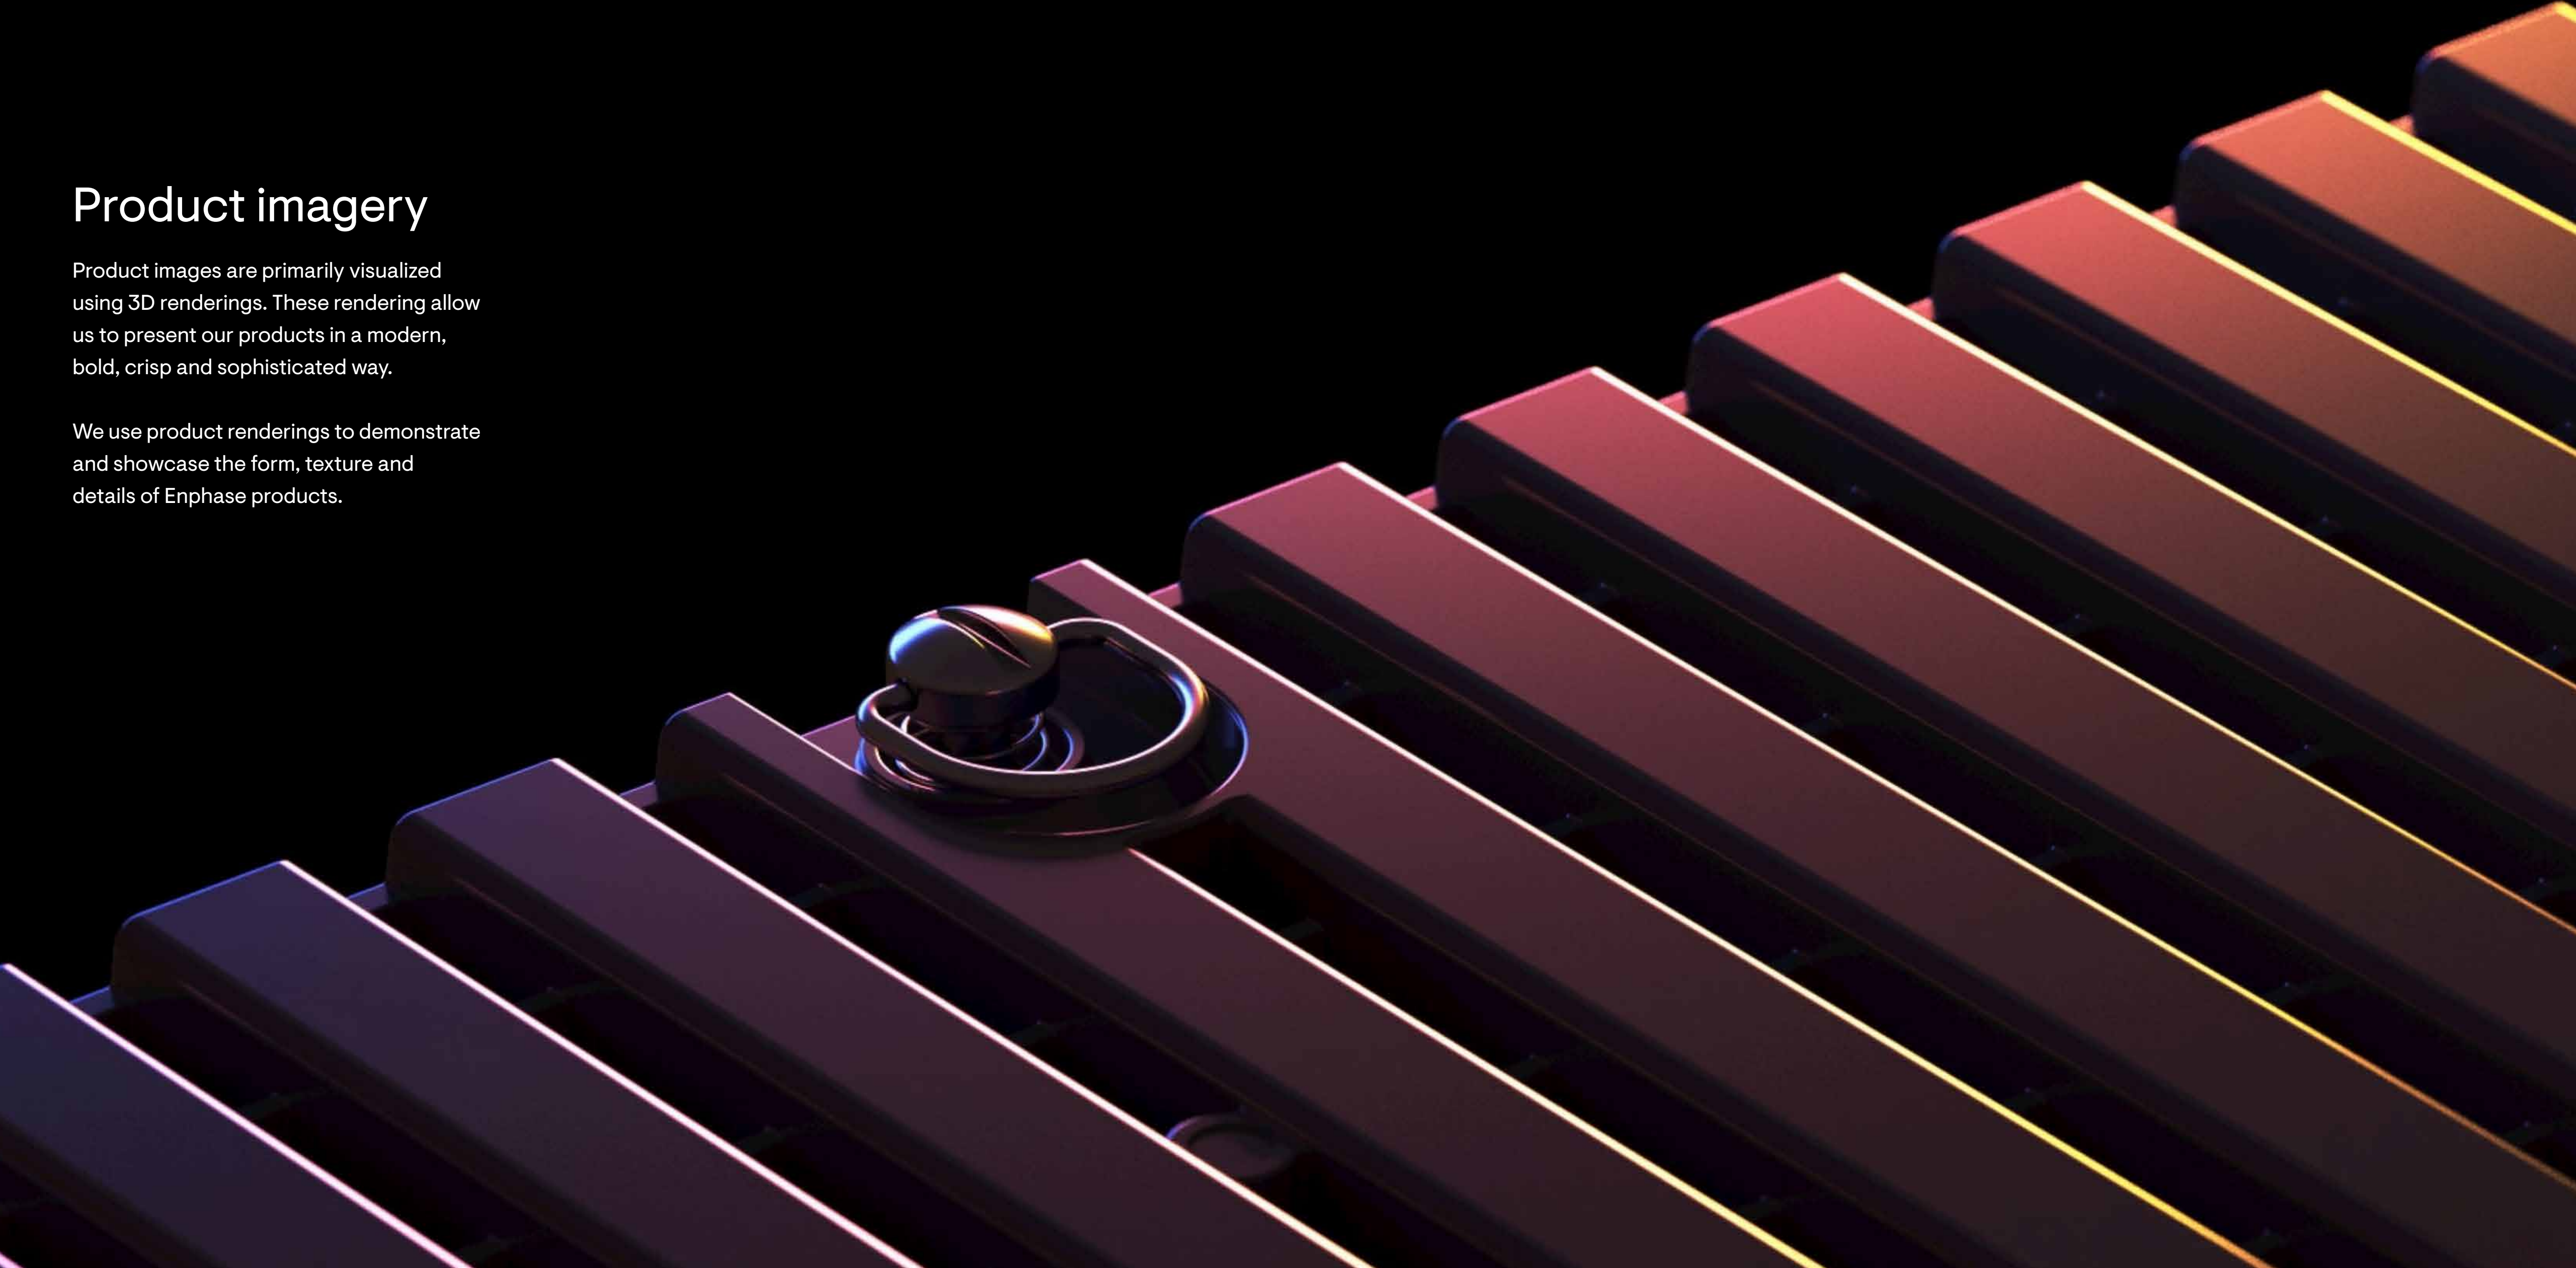

In addition to showcasing our products being used by customers there’s opportunity to showcase the feeling and excitement brought by Enphase’s innovations. Our inspirational imagery highlights the beauty and magic of the sun as a source for collective inspiration and enthusiasm.

Product imagery

Product images are primarily visualized using 3D renderings. These rendering allow us to present our products in a modern, bold, crisp and sophisticated way.

We use product renderings to demonstrate and showcase the form, texture and details of Enphase products.

Title

Rendering principles

Hero product images should use our color palette for lighting as if the sunrise or sunset was casting a warm light on the products themselves. Backgrounds can appear as gradients or solid black, depending on the needs of the image.

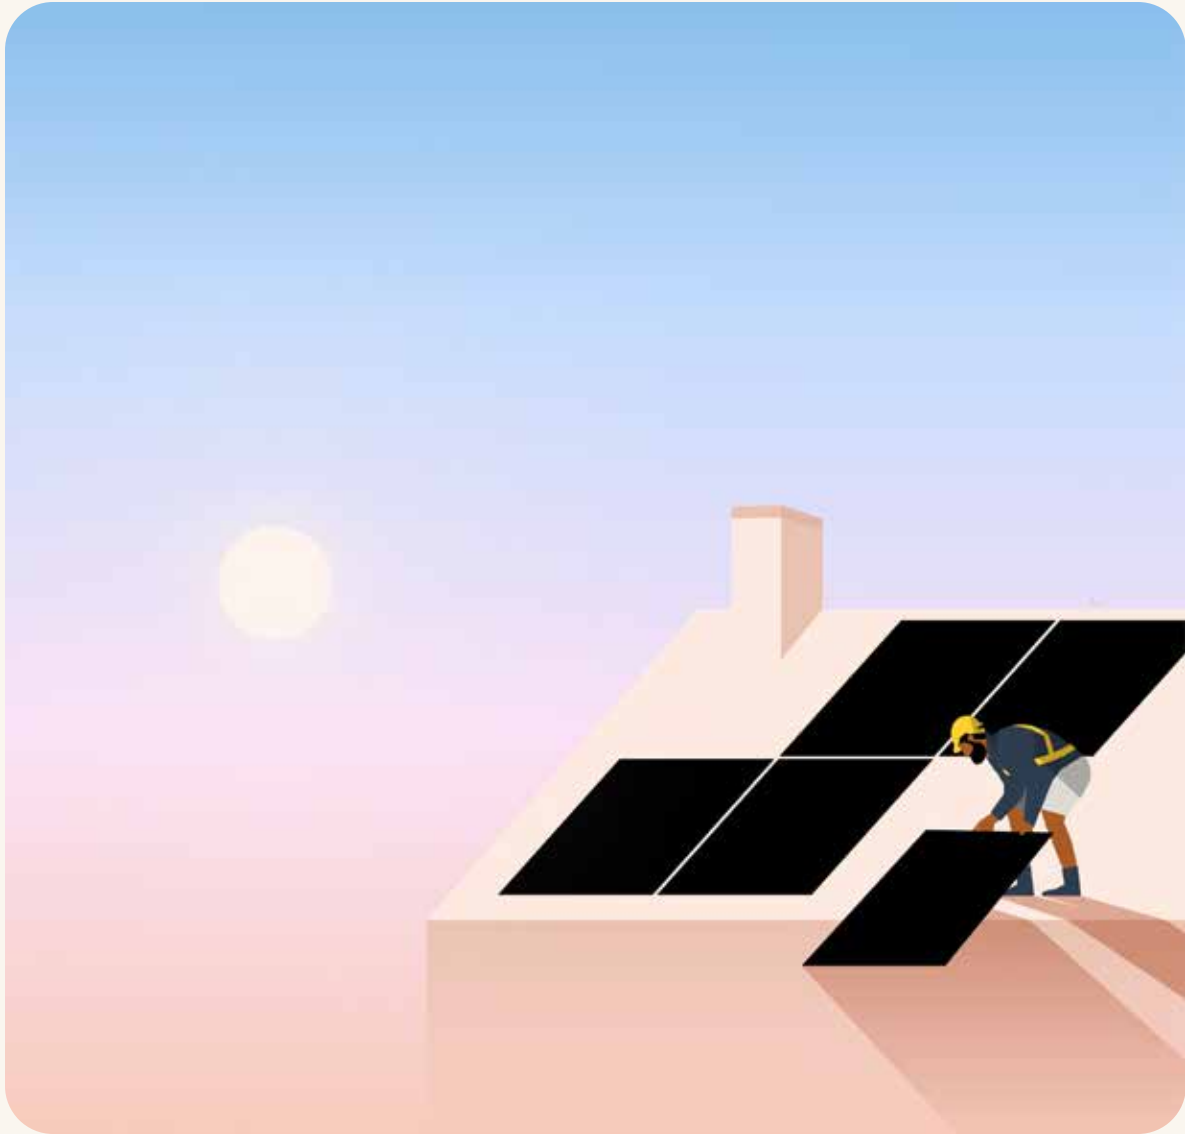

Illustration

Our illustration style is built from the evocative nature of our brand gradients and lifestyle imagery. Themes of dusk, dawn, and clean energy use aim to create feelings of optimism and heightened reality.

Visual qualities

Simple shapes, gradient colors, and light textures give our illustration a editorial feel whilst feeling distinct to our brand.

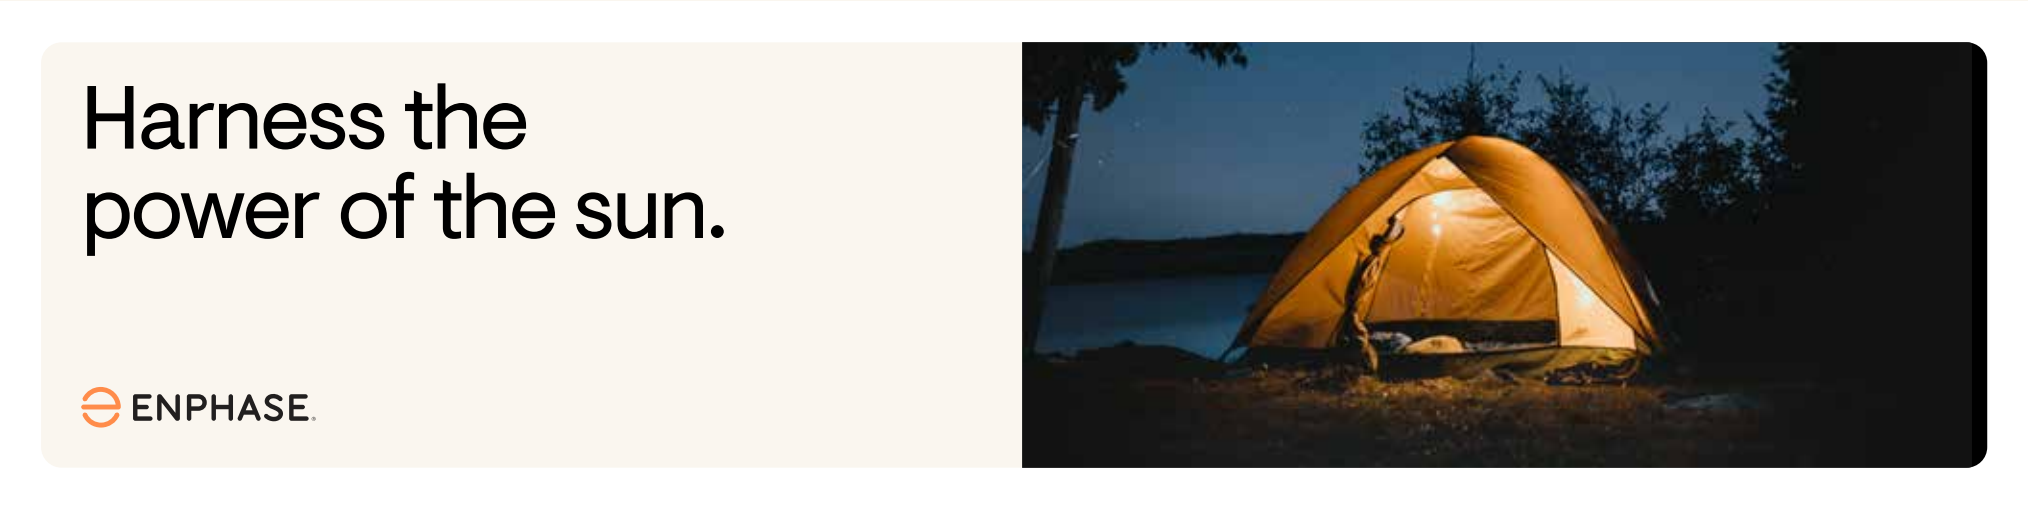

Grids and Layout

Composition

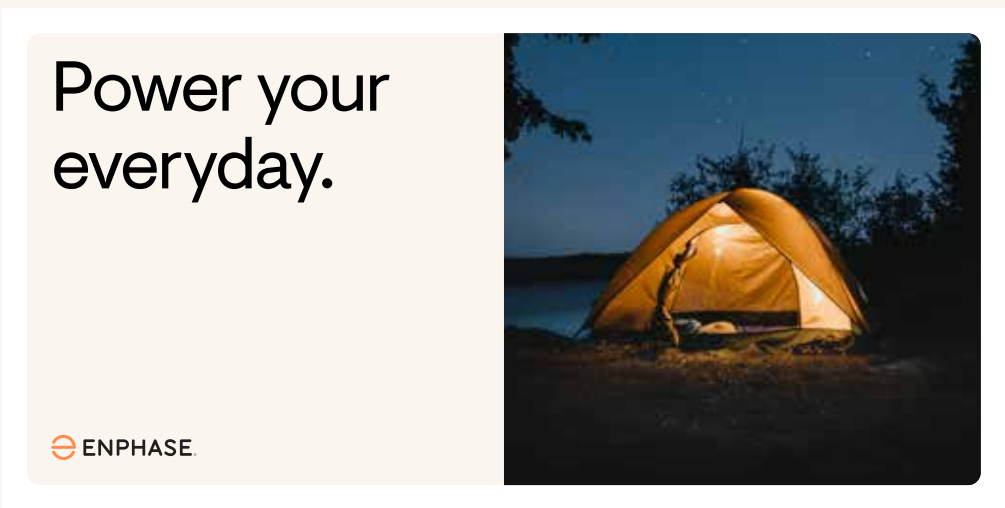

Our composition system is based on a simple system of rounded rectangles or Tiles. These tile shapes are derived from the cells seen on a solar panel.

By defining the grid based on the width or height of the format, the system stays flexible, consistent and beyond easy to apply.

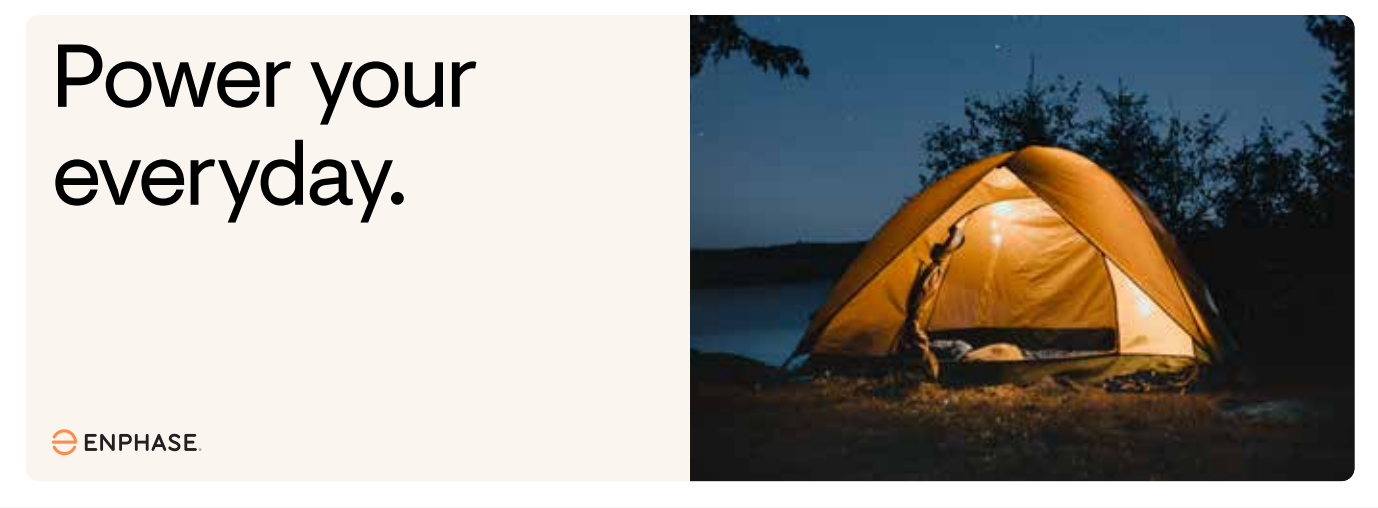

96 SHEET

9:16

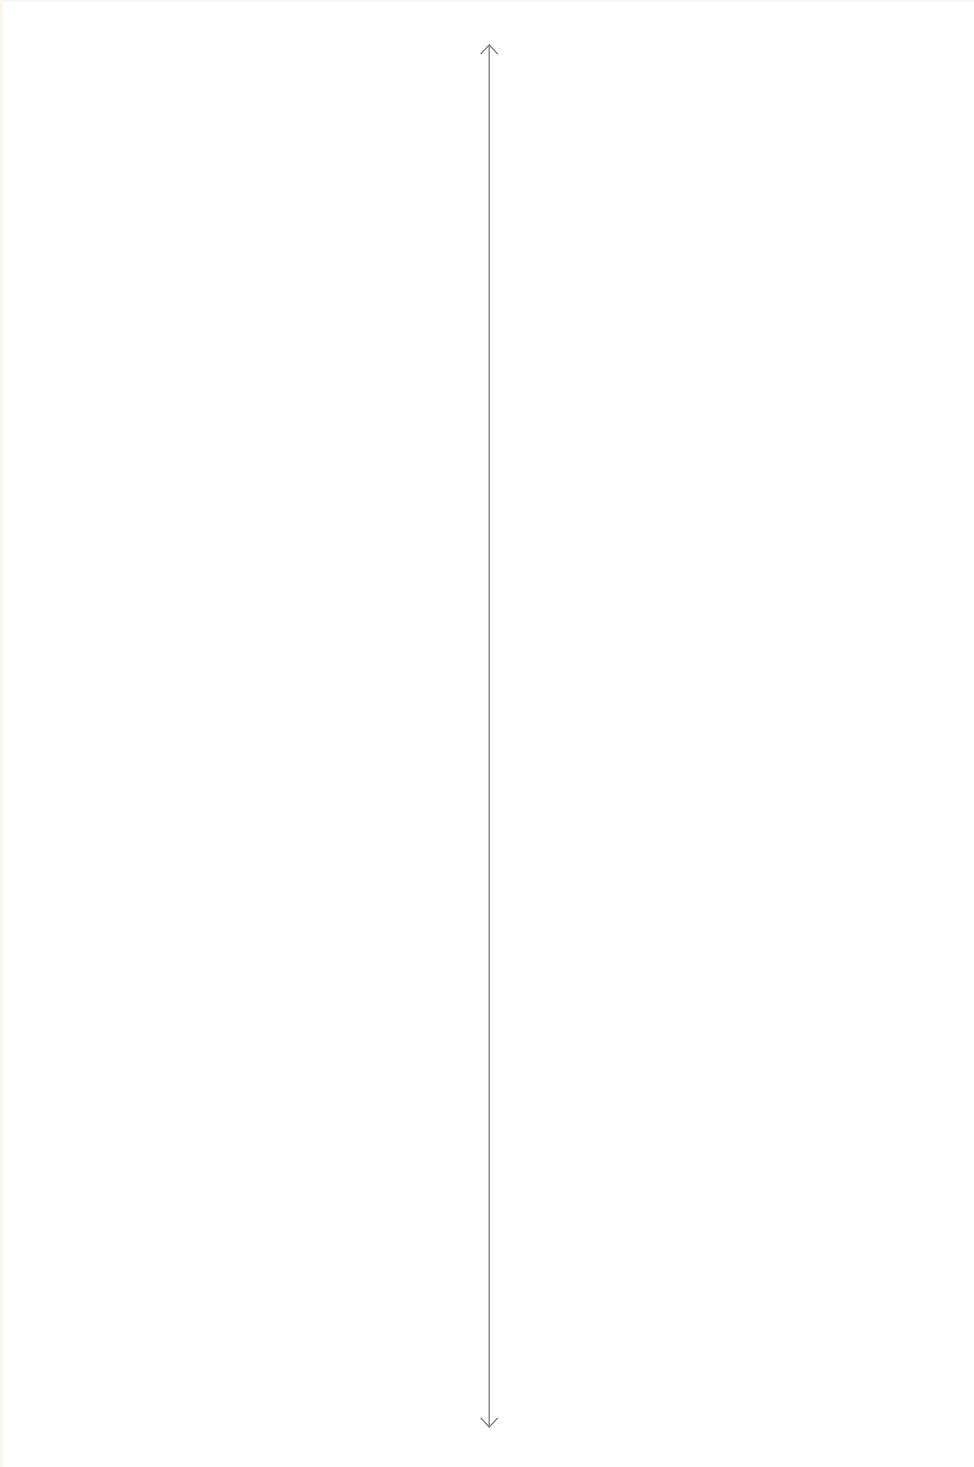

1:1

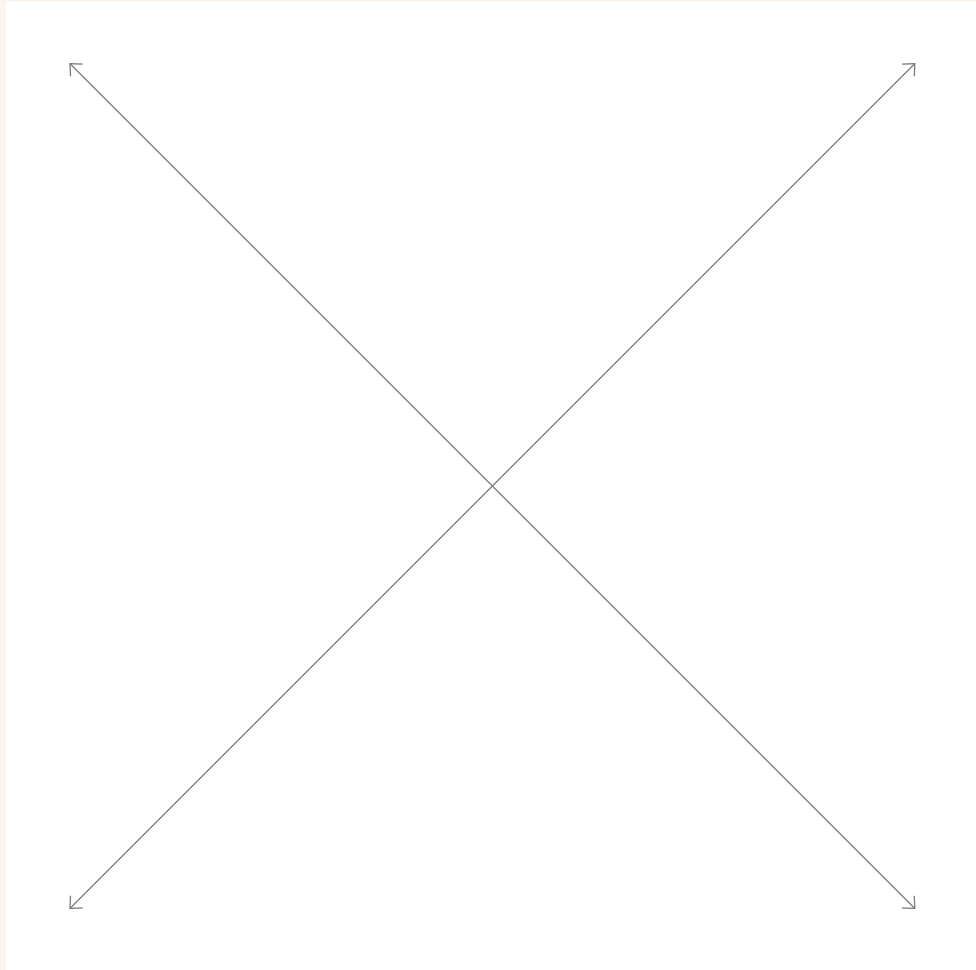

Formats

These are three common composition formats that will be used frequently across our communications. When appropriate, use these formats when creating new designs.

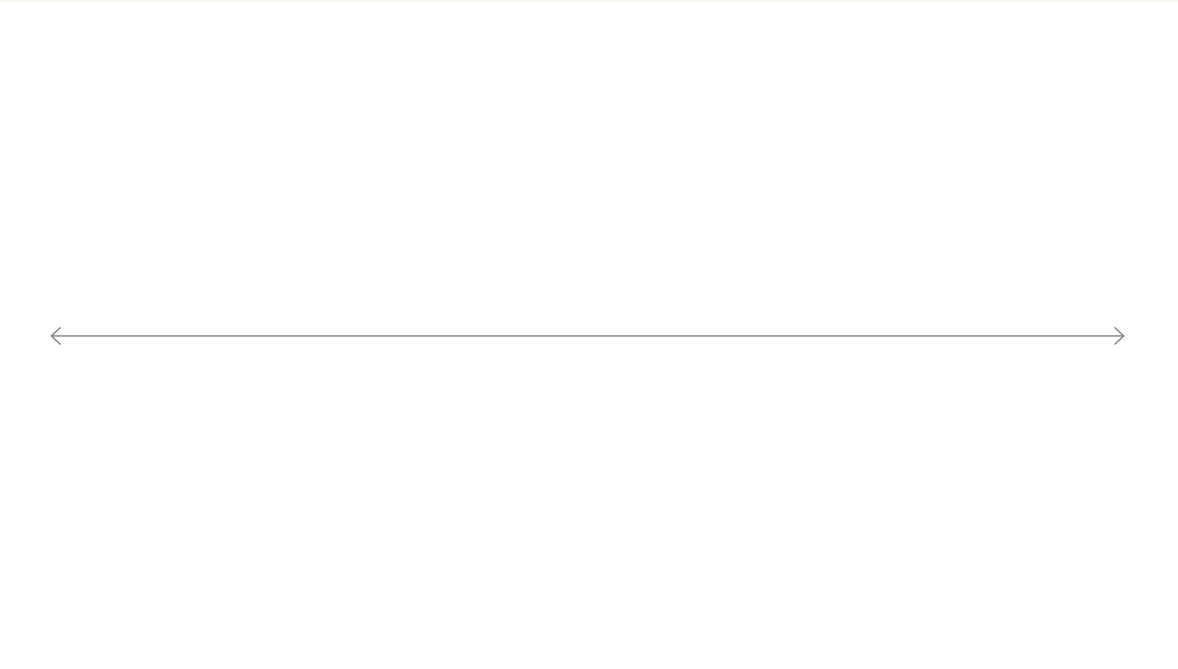

VERTICAL COMPOSITION

SQUARE COMPOSITION

HORIZONTAL COMPOSITION

Margins

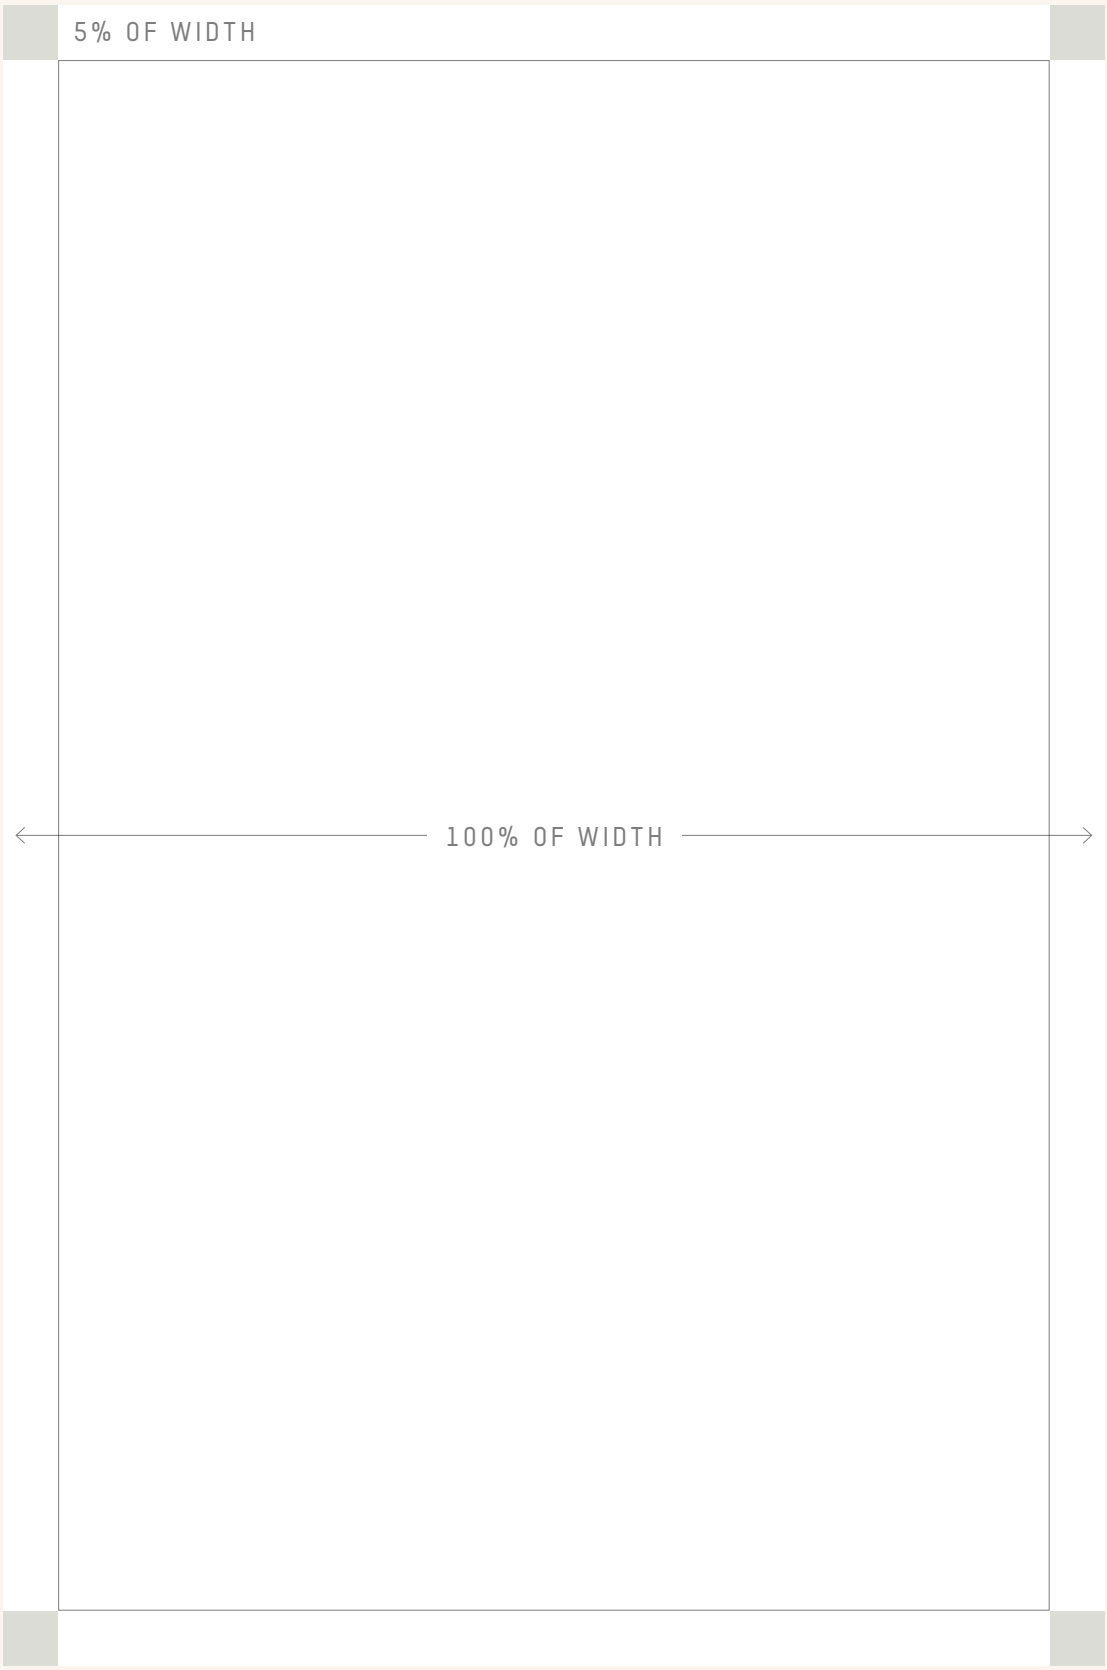

To create a grid for a composition, the first step consists in calculating the margins.

For vertical and square compositions we allocate 5% of the total width to each side.

For horizontal compositions we allocate 5% of the total height.

For digital applications, please round the 5% value to the nearest whole number. For example, if the width of a digital application is 525px, 5% of 525px would equal 26.25. Rounding the value to the nearest whole number would create a margin value of 26px

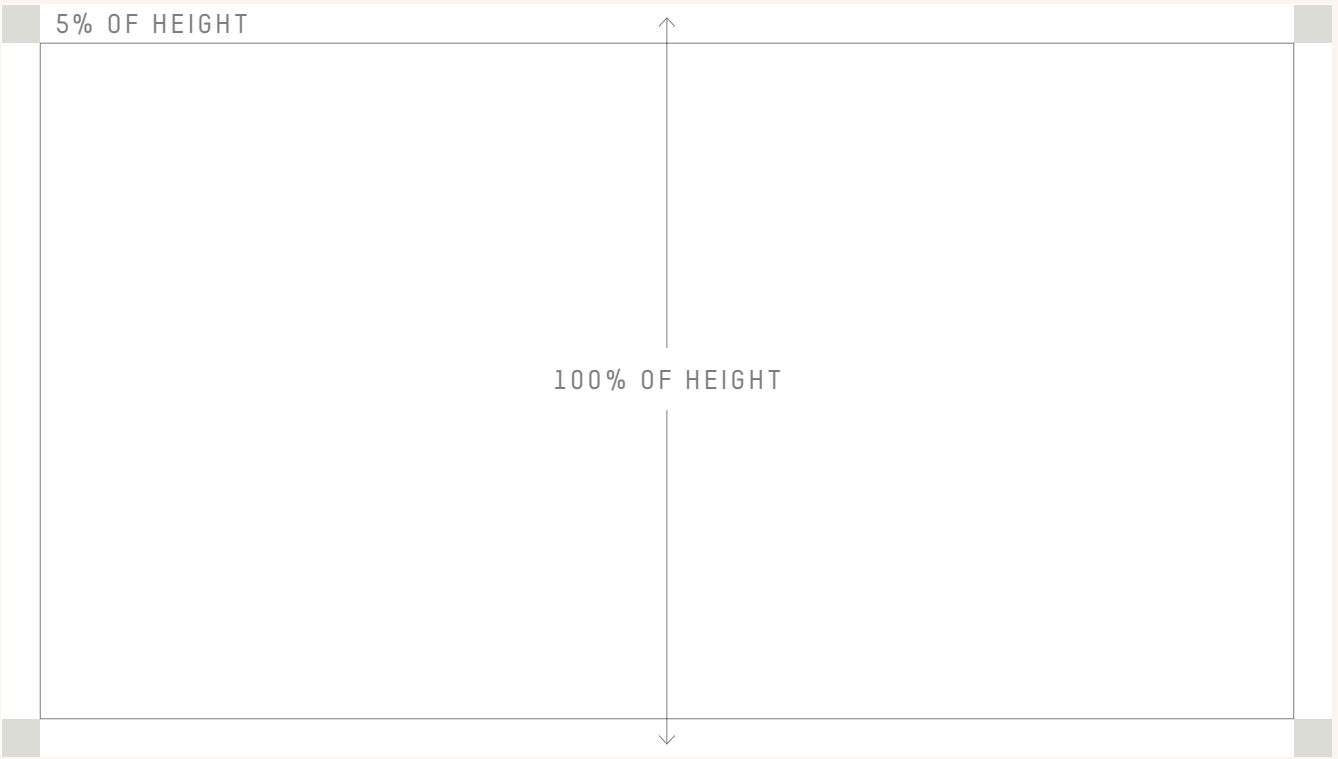

VERTICAL COMPOSITION

SQUARE COMPOSITION

HORIZONTAL COMPOSITION

Margin exceptions

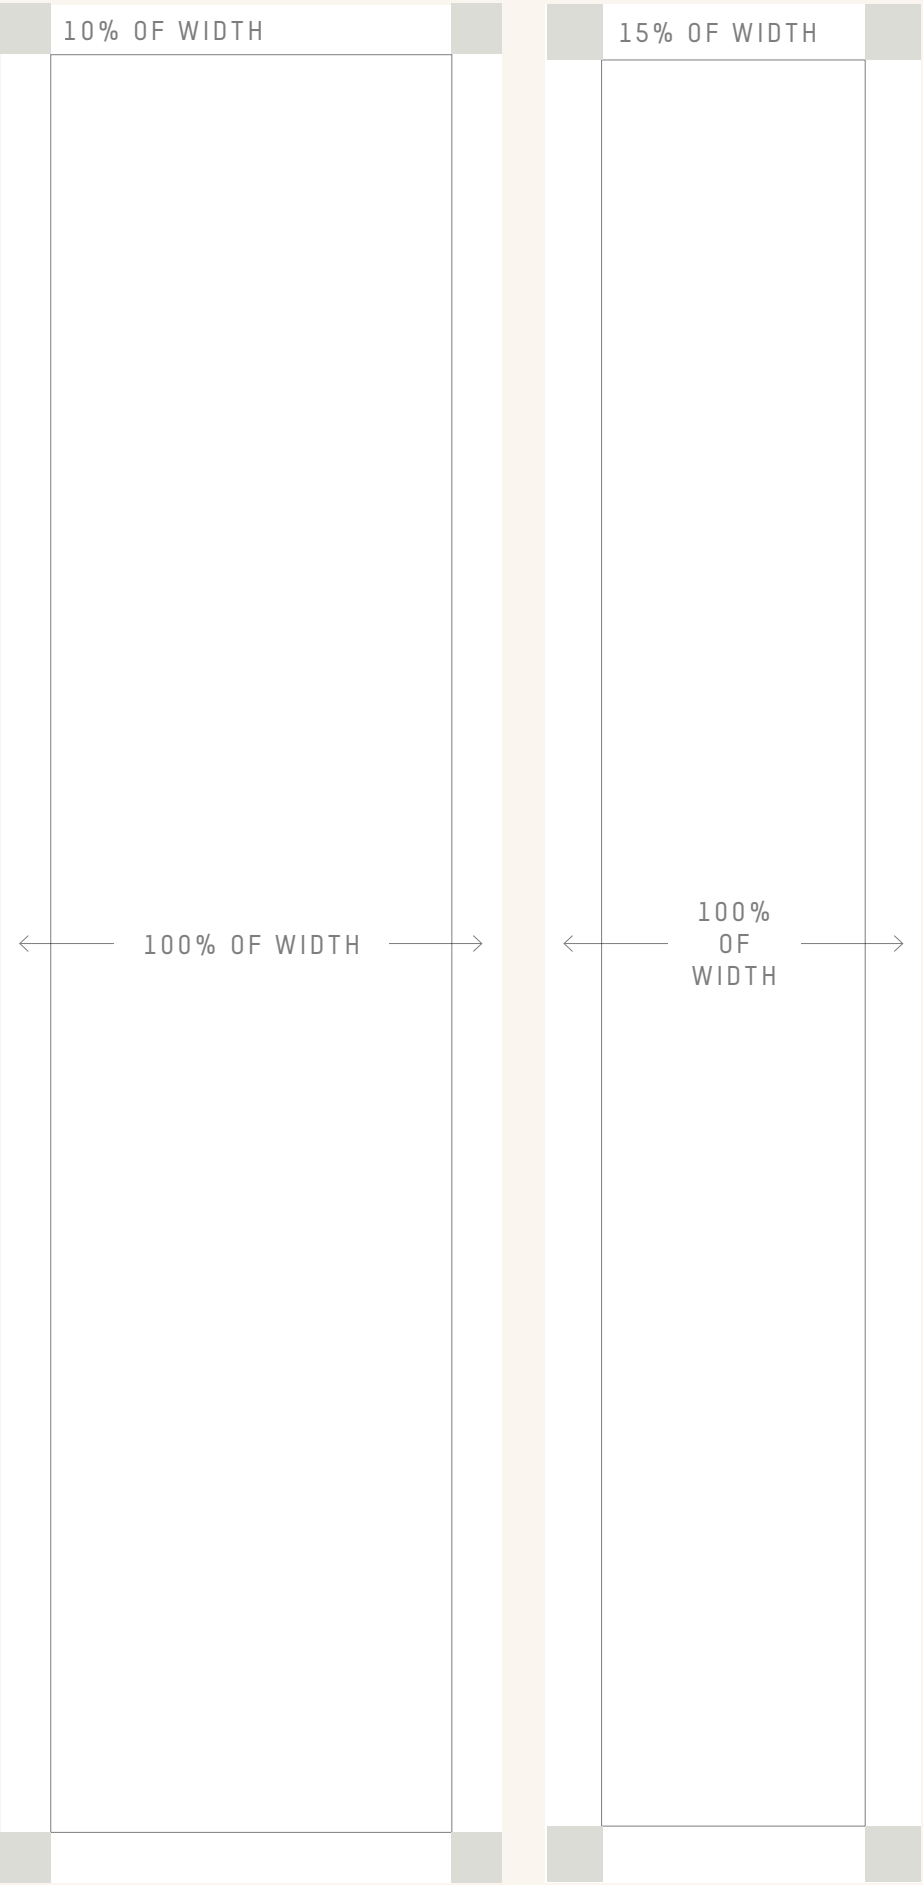

There may be some formats where the 5% rule may result in the margin being too wide or too narrow.

For vertical compositions we may allocate 6-20% of the total width to each side.

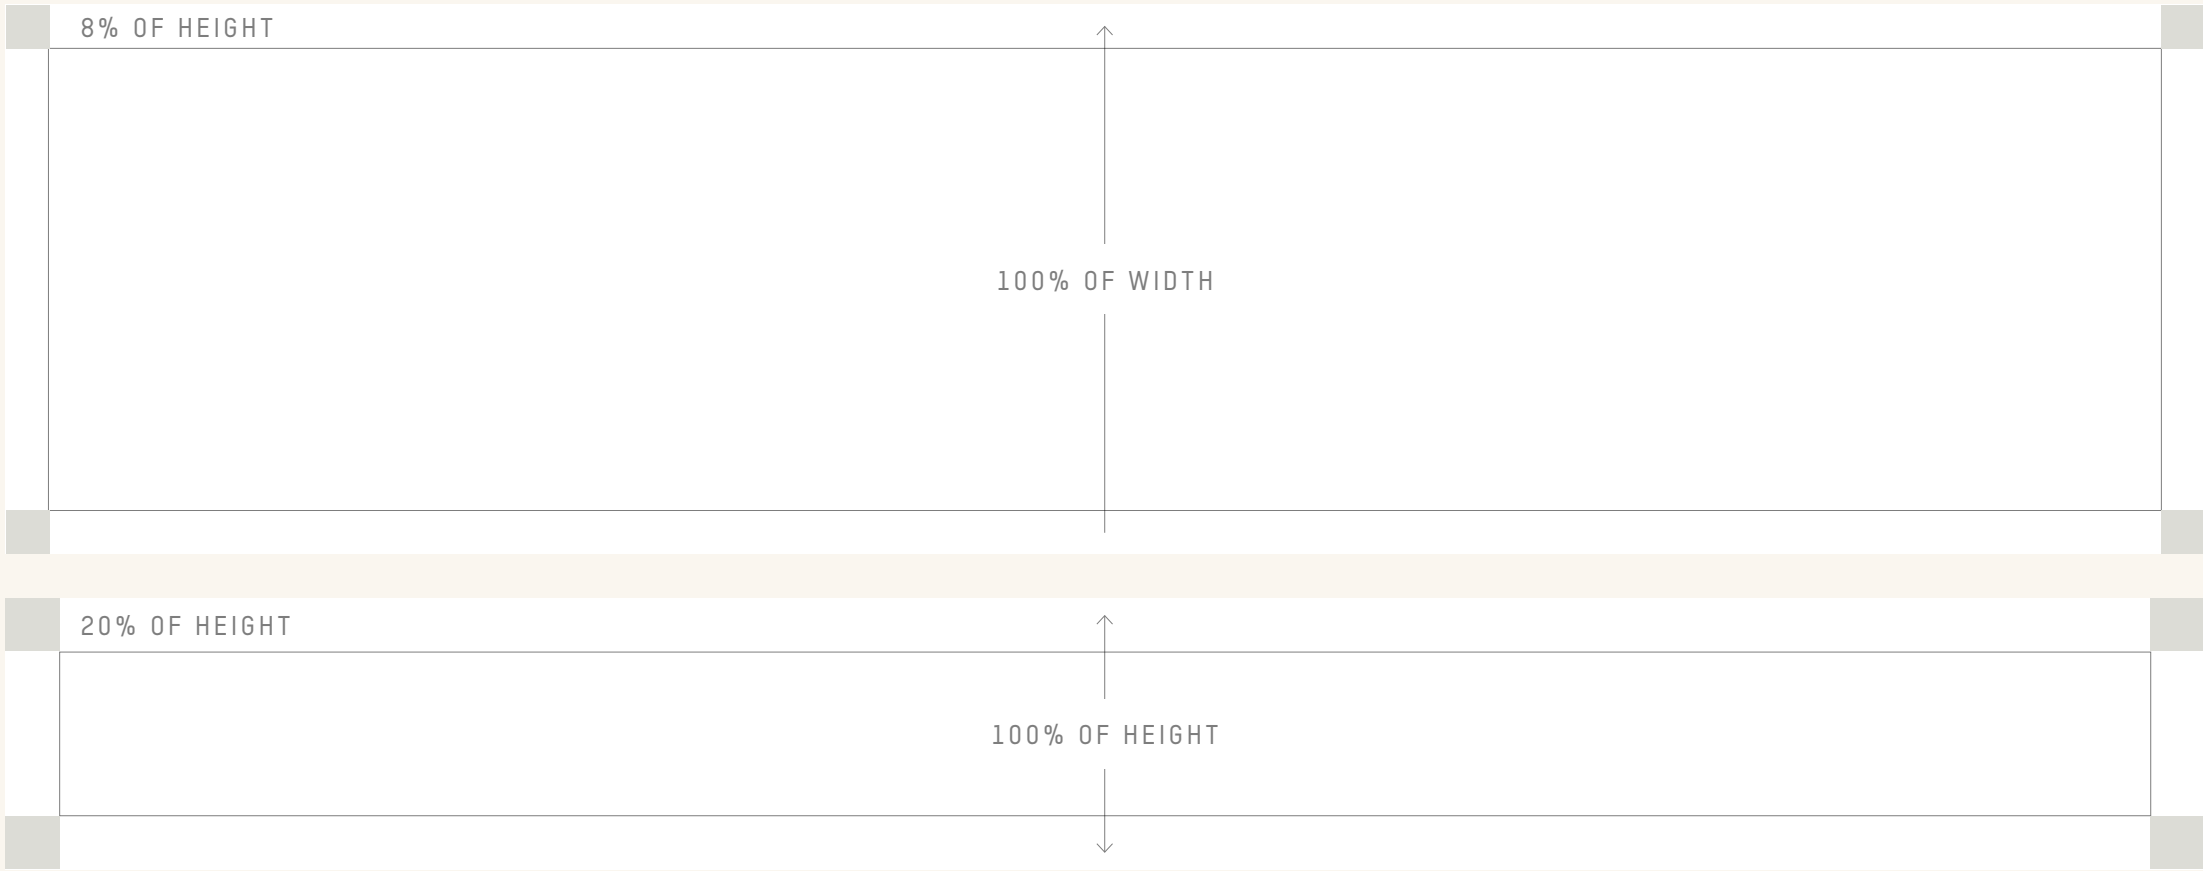

For horizontal compositions we may allocate 6-20% of the total height.

Show opposite are examples of how this rule may be applied to extreme vertical or extreme horizontal formats.

EXTREME VERTICAL COMPOSITION

EXTREME HORIZONTAL COMPOSITION

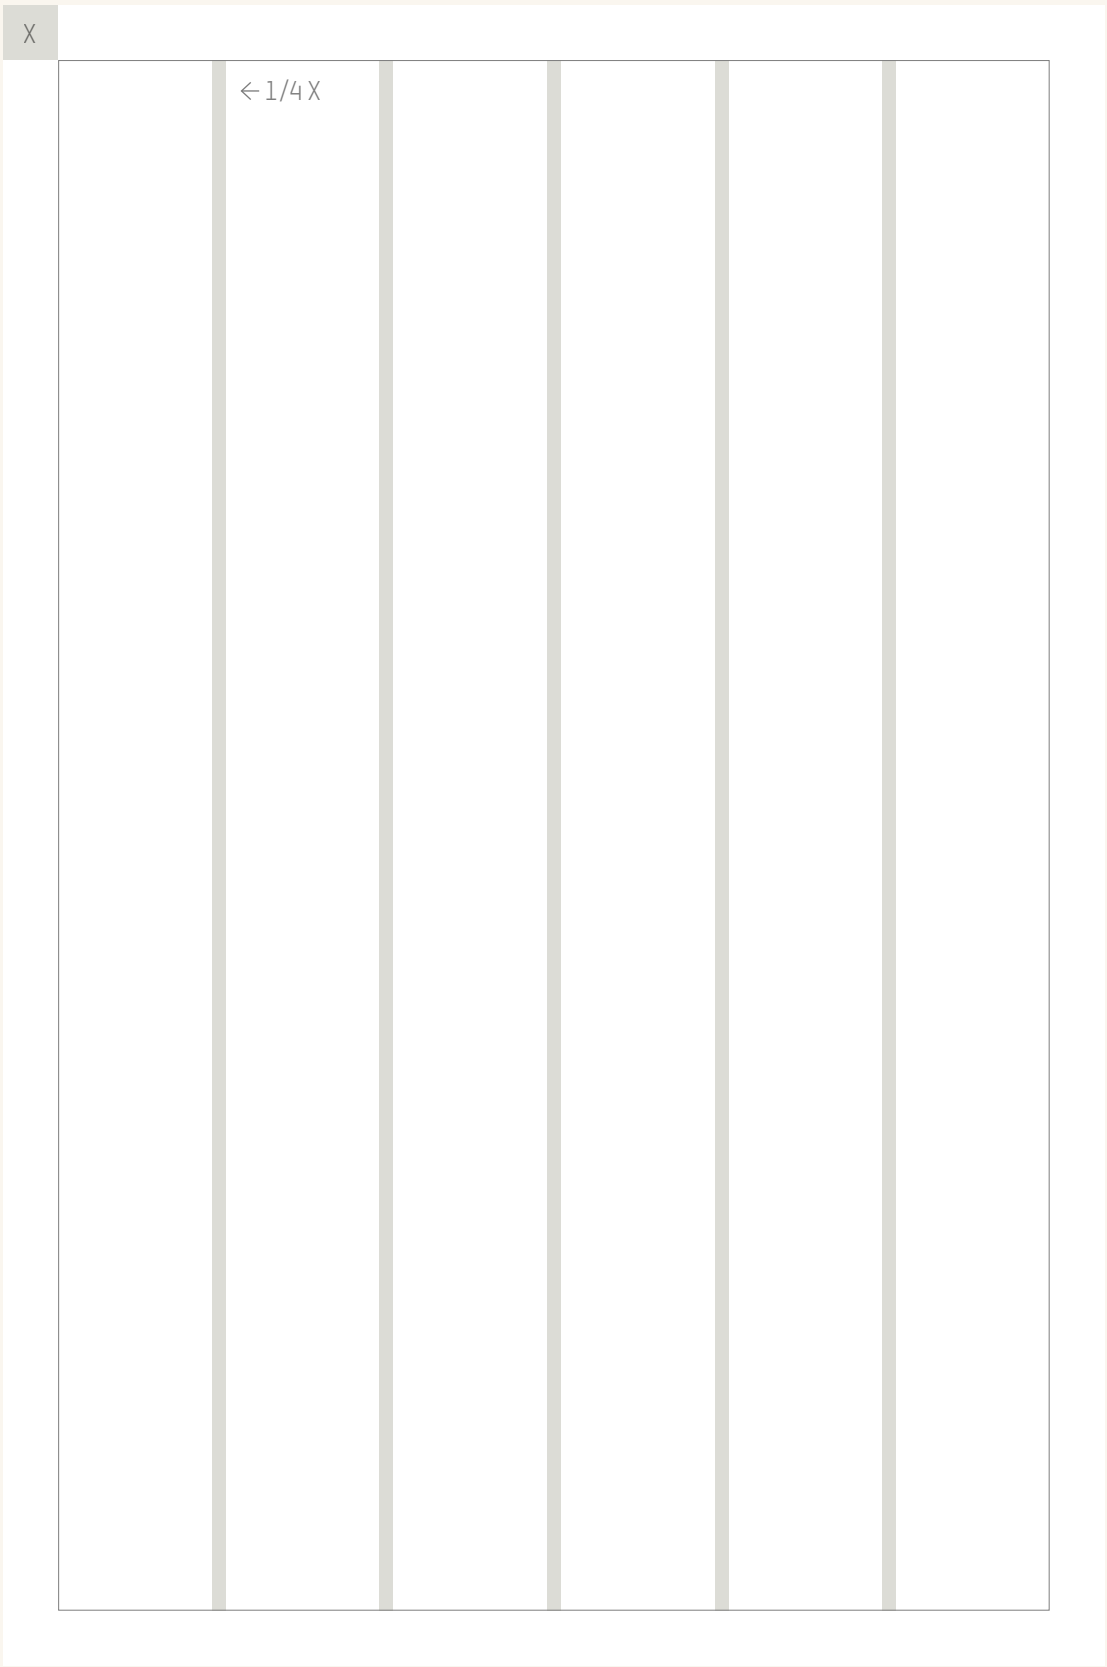

Columns

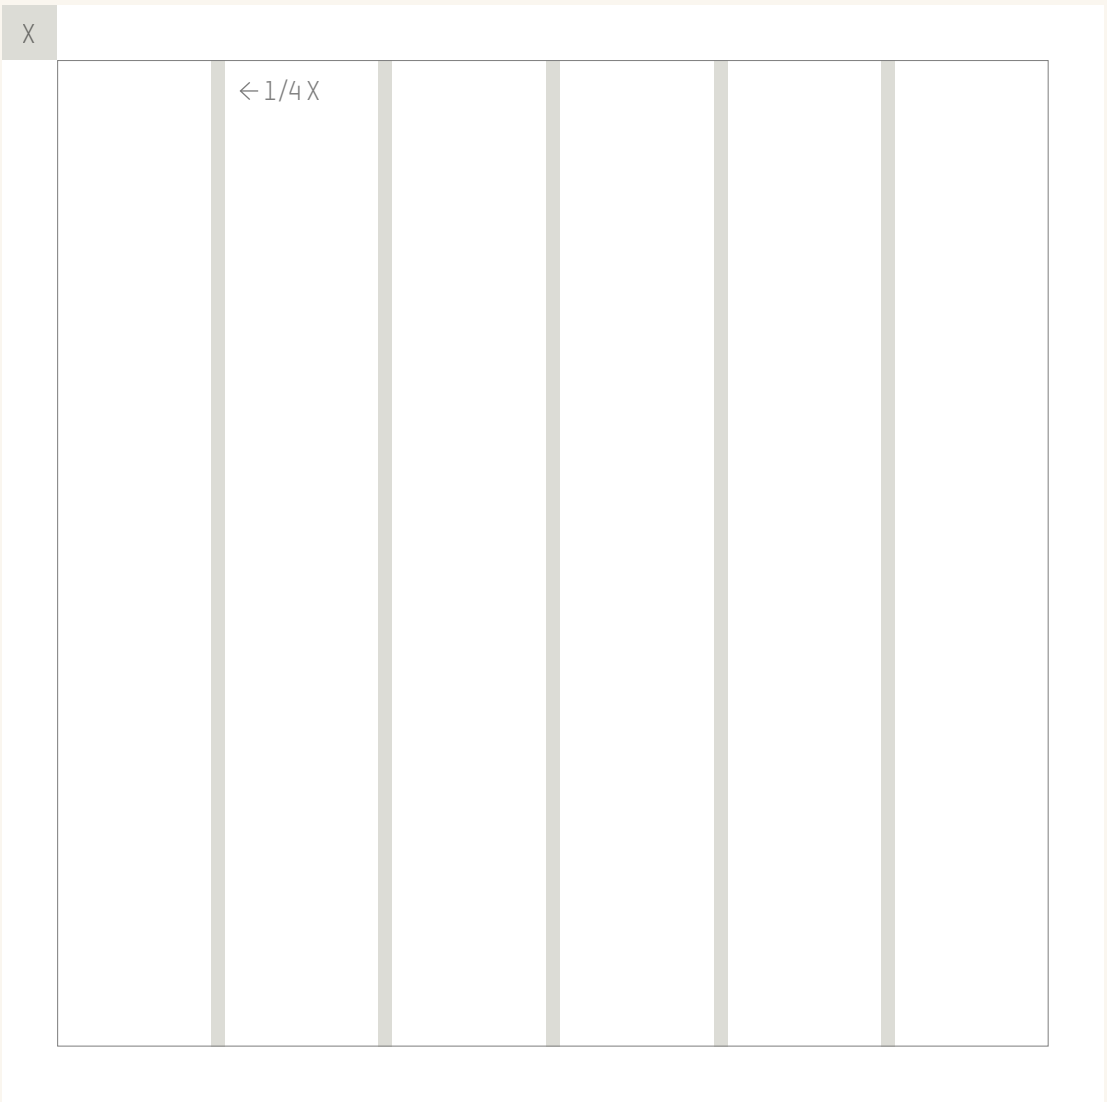

It is favorable to assign a number of columns divisible by three for any composition. However, the number of columns can go up or down depending on the needs of the designer. Here are the most common number of columns used vertical and horizontal formats.

In order to determine the width of column gutters, we divide the margin width (X) into quarters. For example, if the margin in a vertical composition is 5% of the total width, the gutters will be 1.25% of the total width.

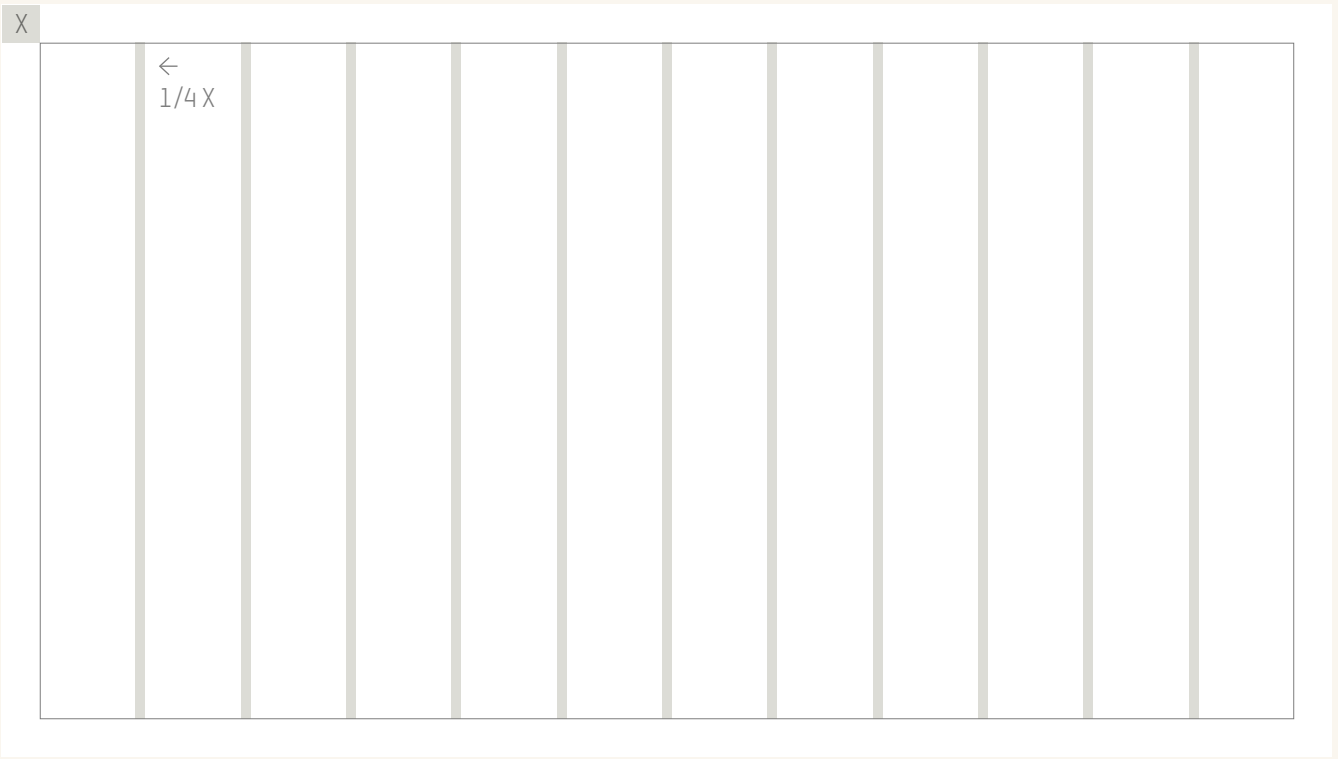

VERTICAL COMPOSITION WITH 6 COLUMN

SQUARE COMPOSITION WITH 6 COLUMN

HORIZONTAL COMPOSITION WITH 12 COLUMN

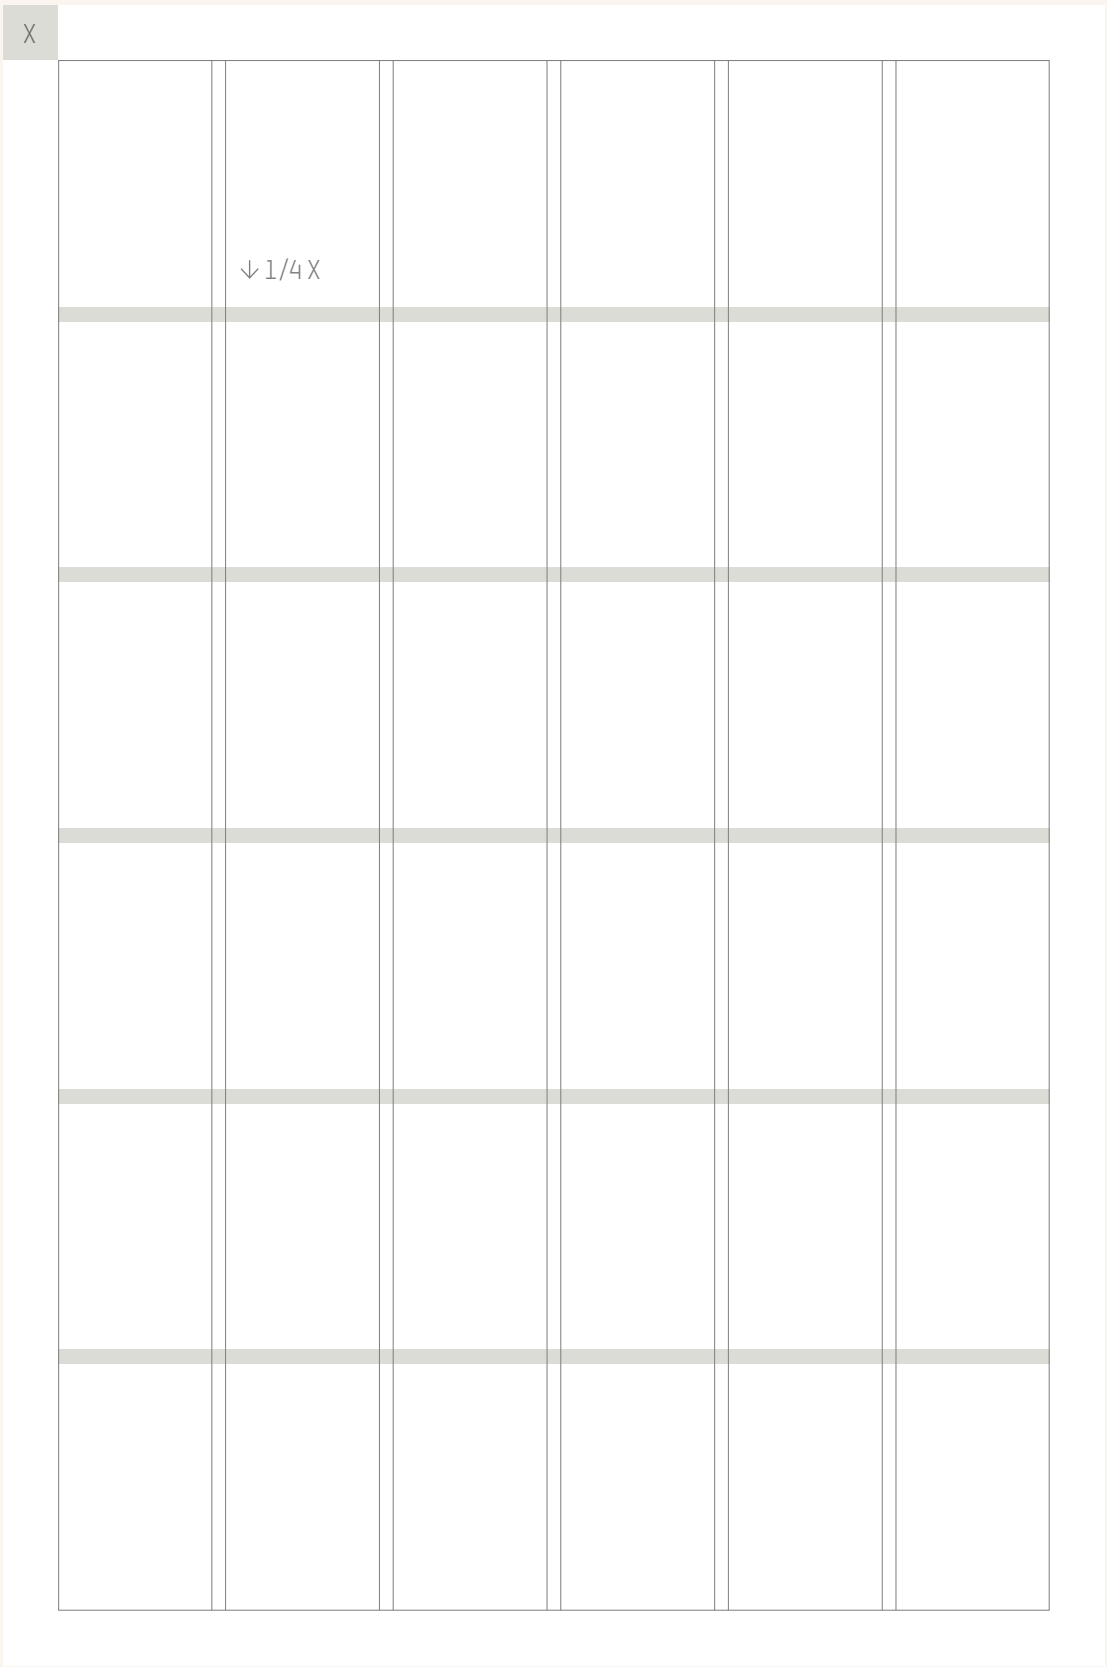

Rows

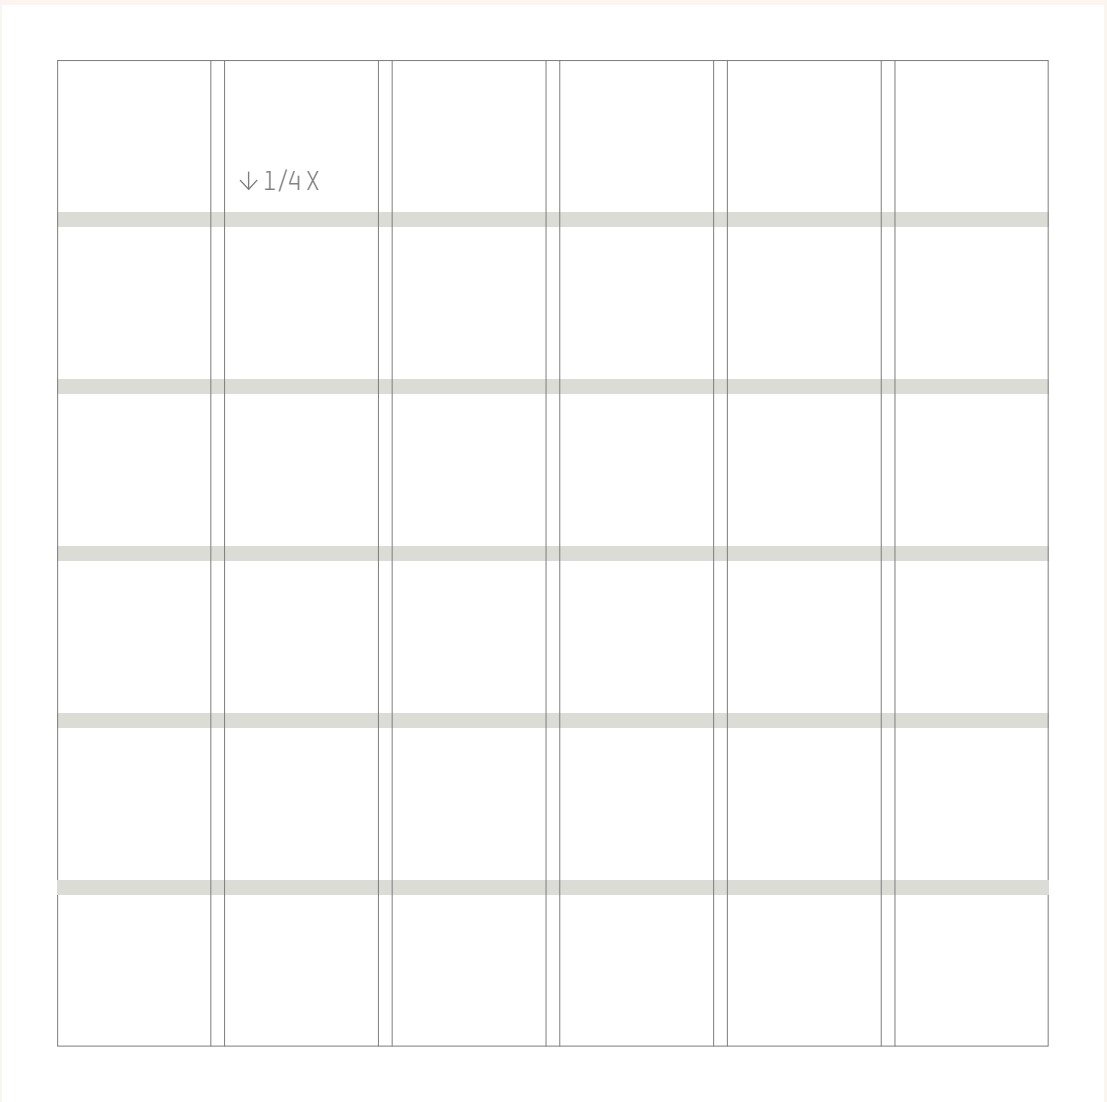

Rows may be added to the design to help guide content. Like columns, the number of rows can go up or down depending on the needs of the designer.

The size of row gutters, is equal to whatever is created for the column gutters (1/4 of the margin size).

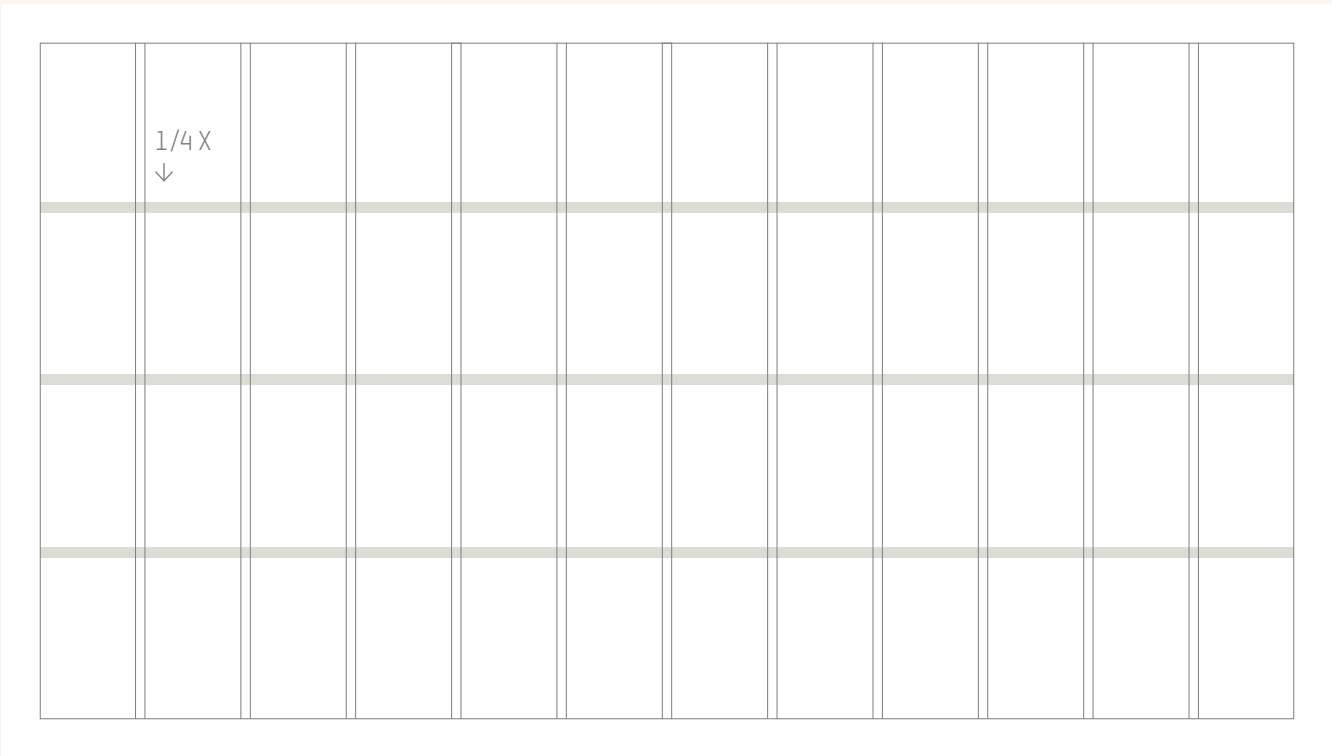

VERTICAL COMPOSITION WITH 6 ROWS

SQUARE COMPOSITION WITH 6 ROWS

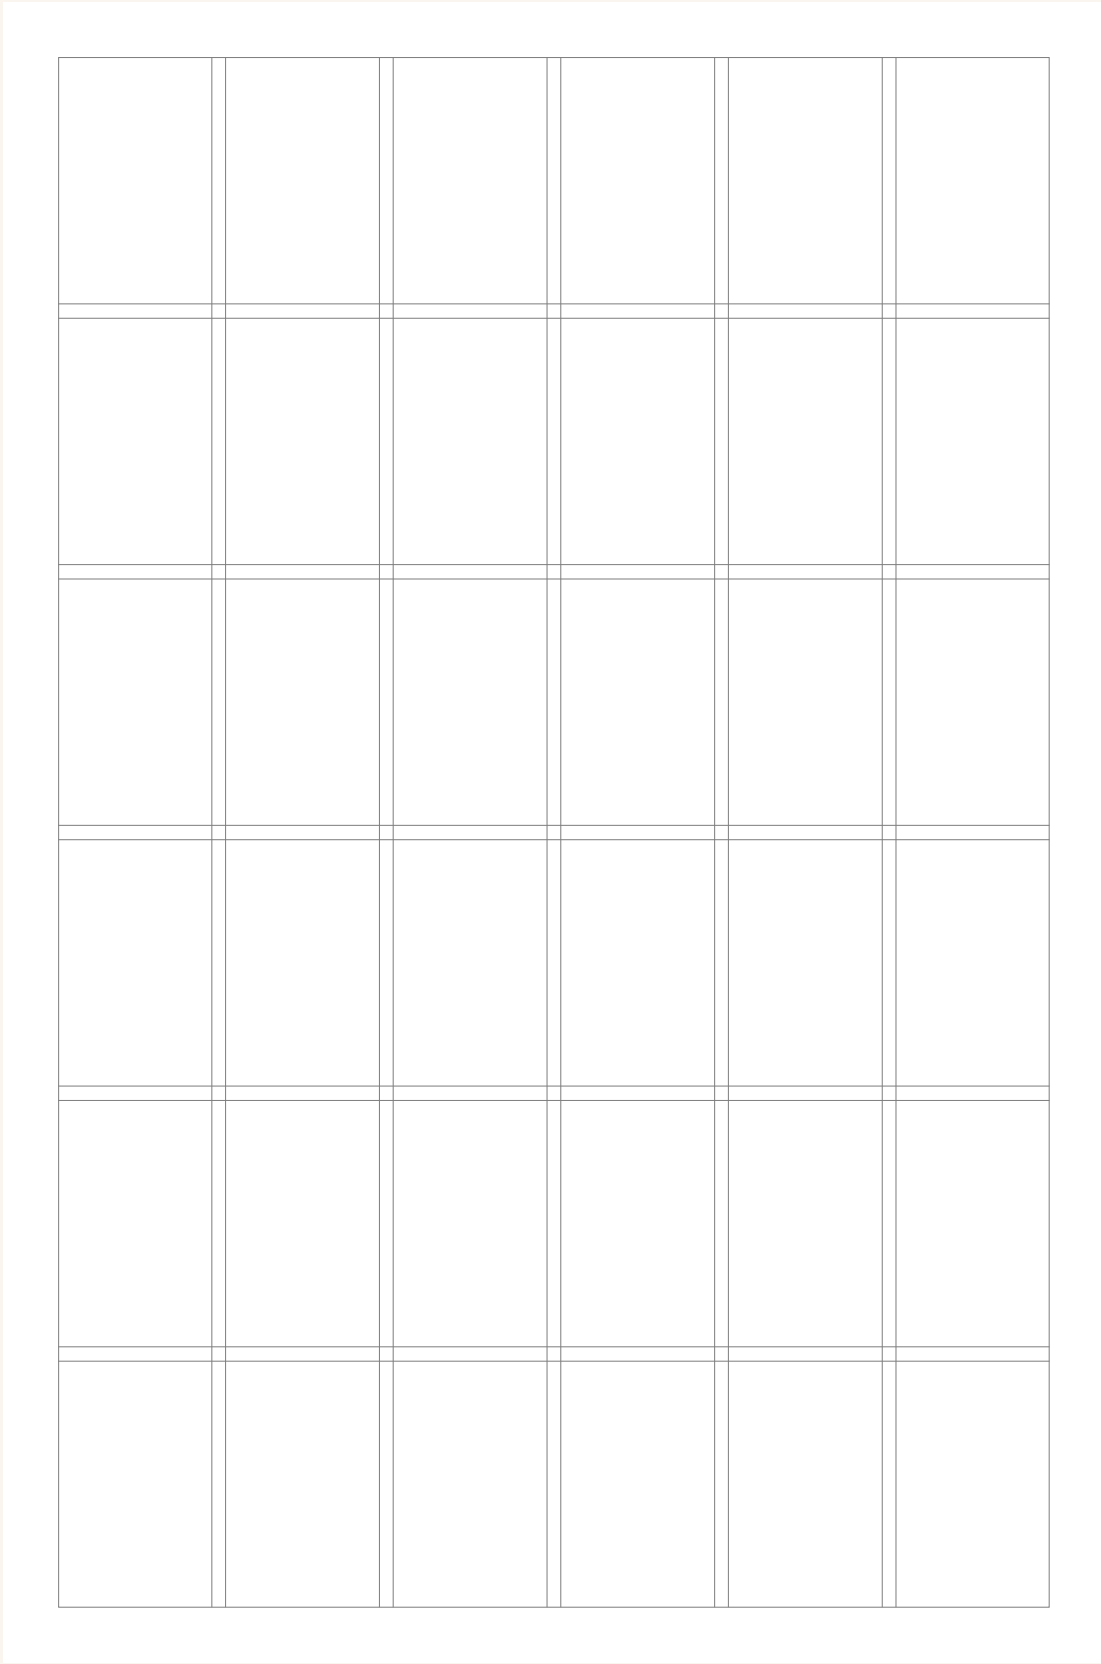

HORIZONTAL COMPOSITION WITH 4 ROWS

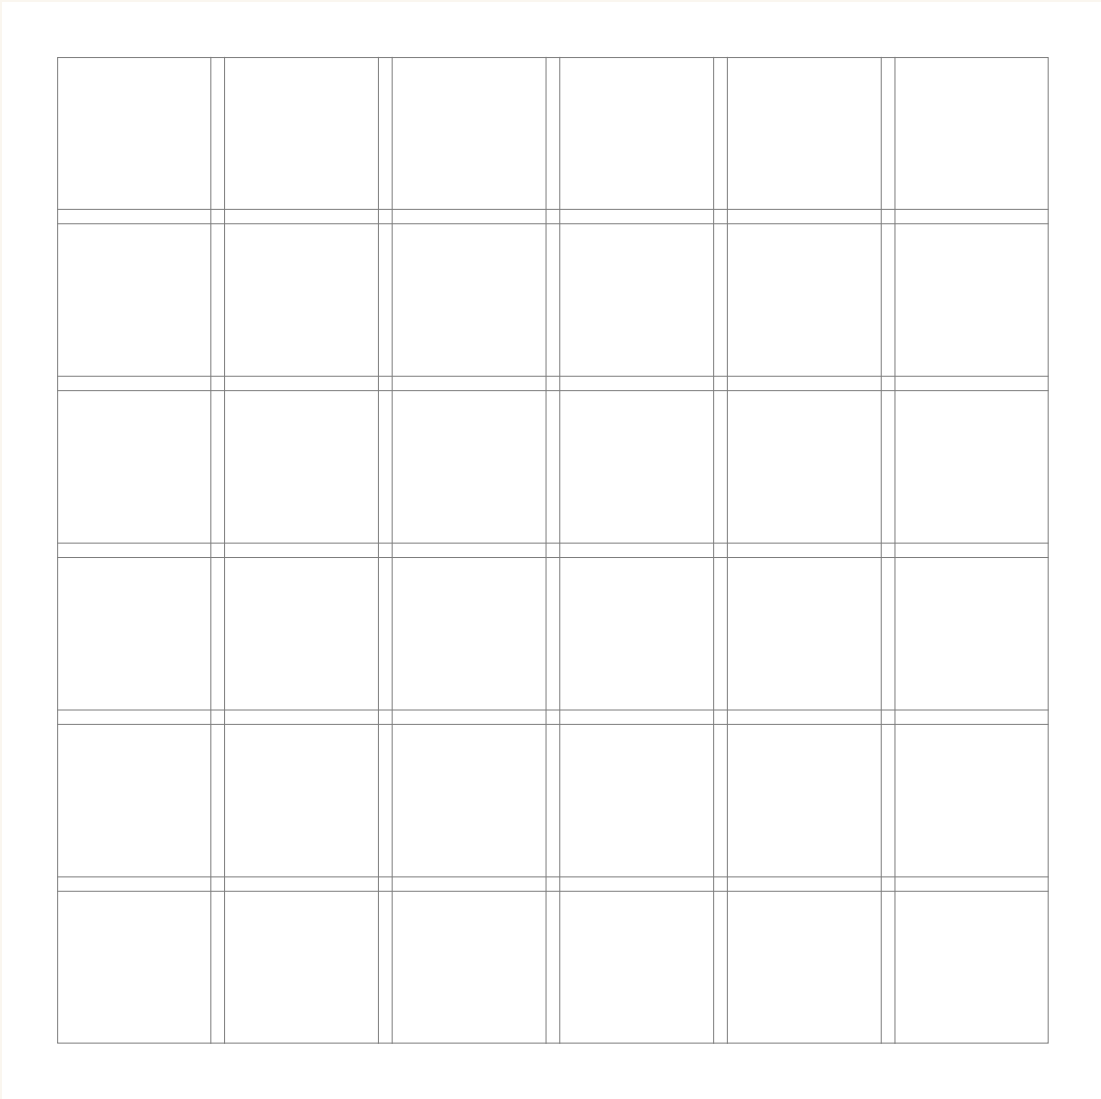

Finalized

Before applying design elements, double check your grid to make sure columns, margins and gutters are applied correctly.

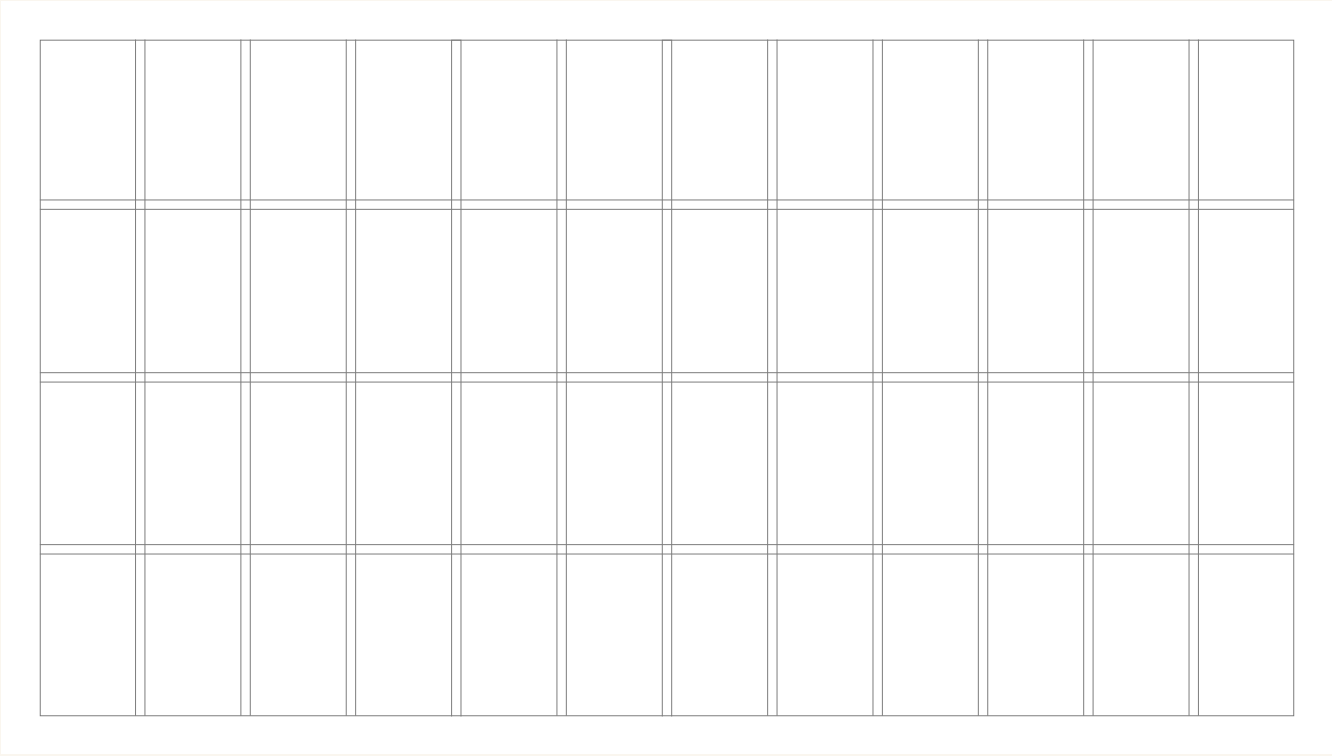

VERTICAL COMPOSITION

SQUARE COMPOSITION

HORIZONTAL COMPOSITION

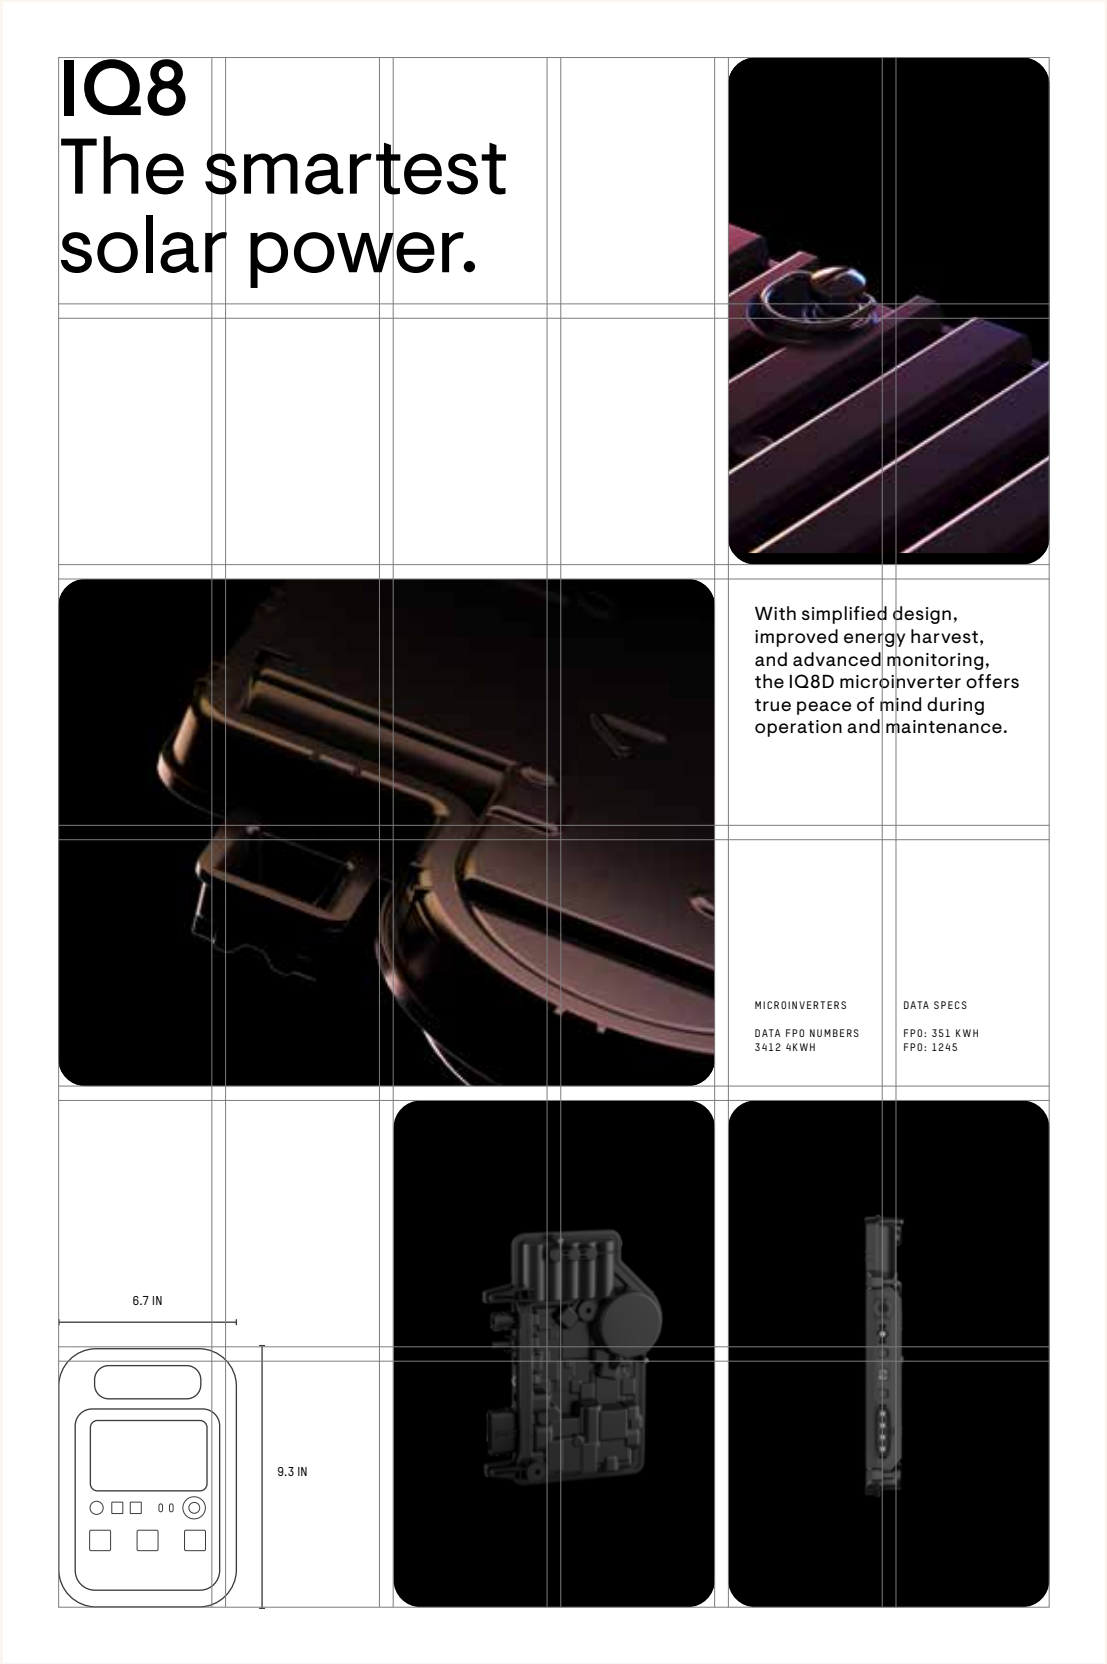

Applying content

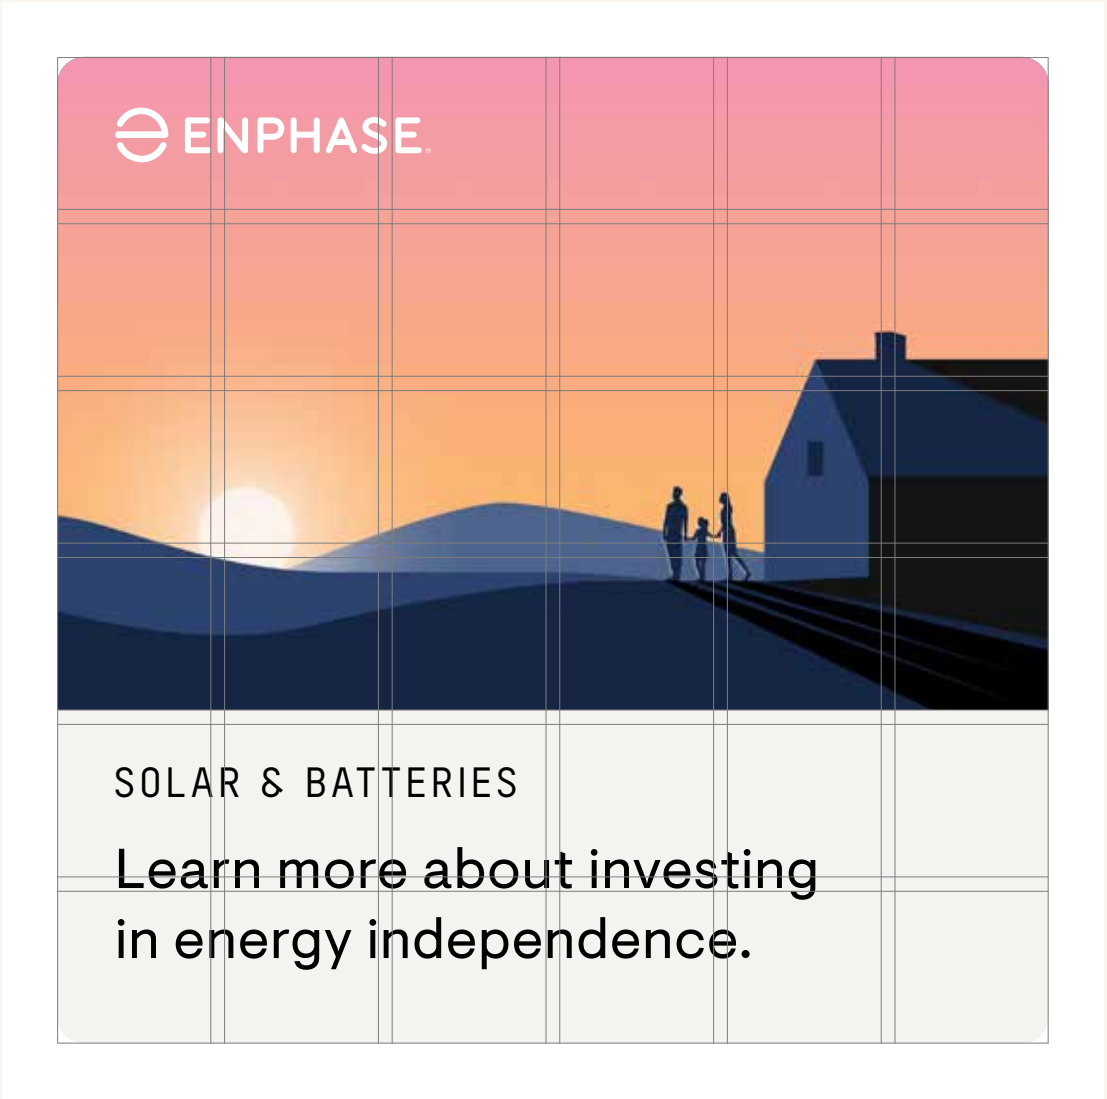

Once the grid is finalized, we can start by applying brand elements and photography onto a composition.

The following pages will further unpack how we design our layouts.

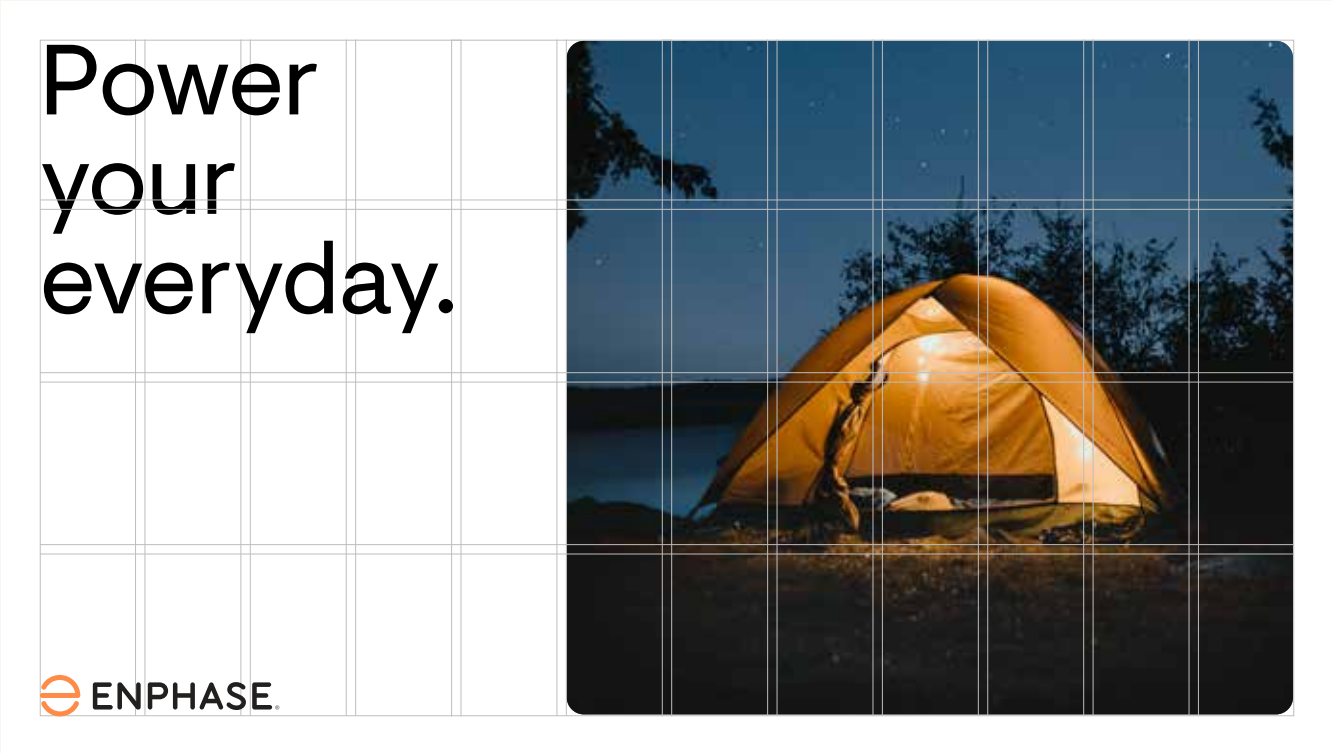

VERTICAL COMPOSITION

Tile cards

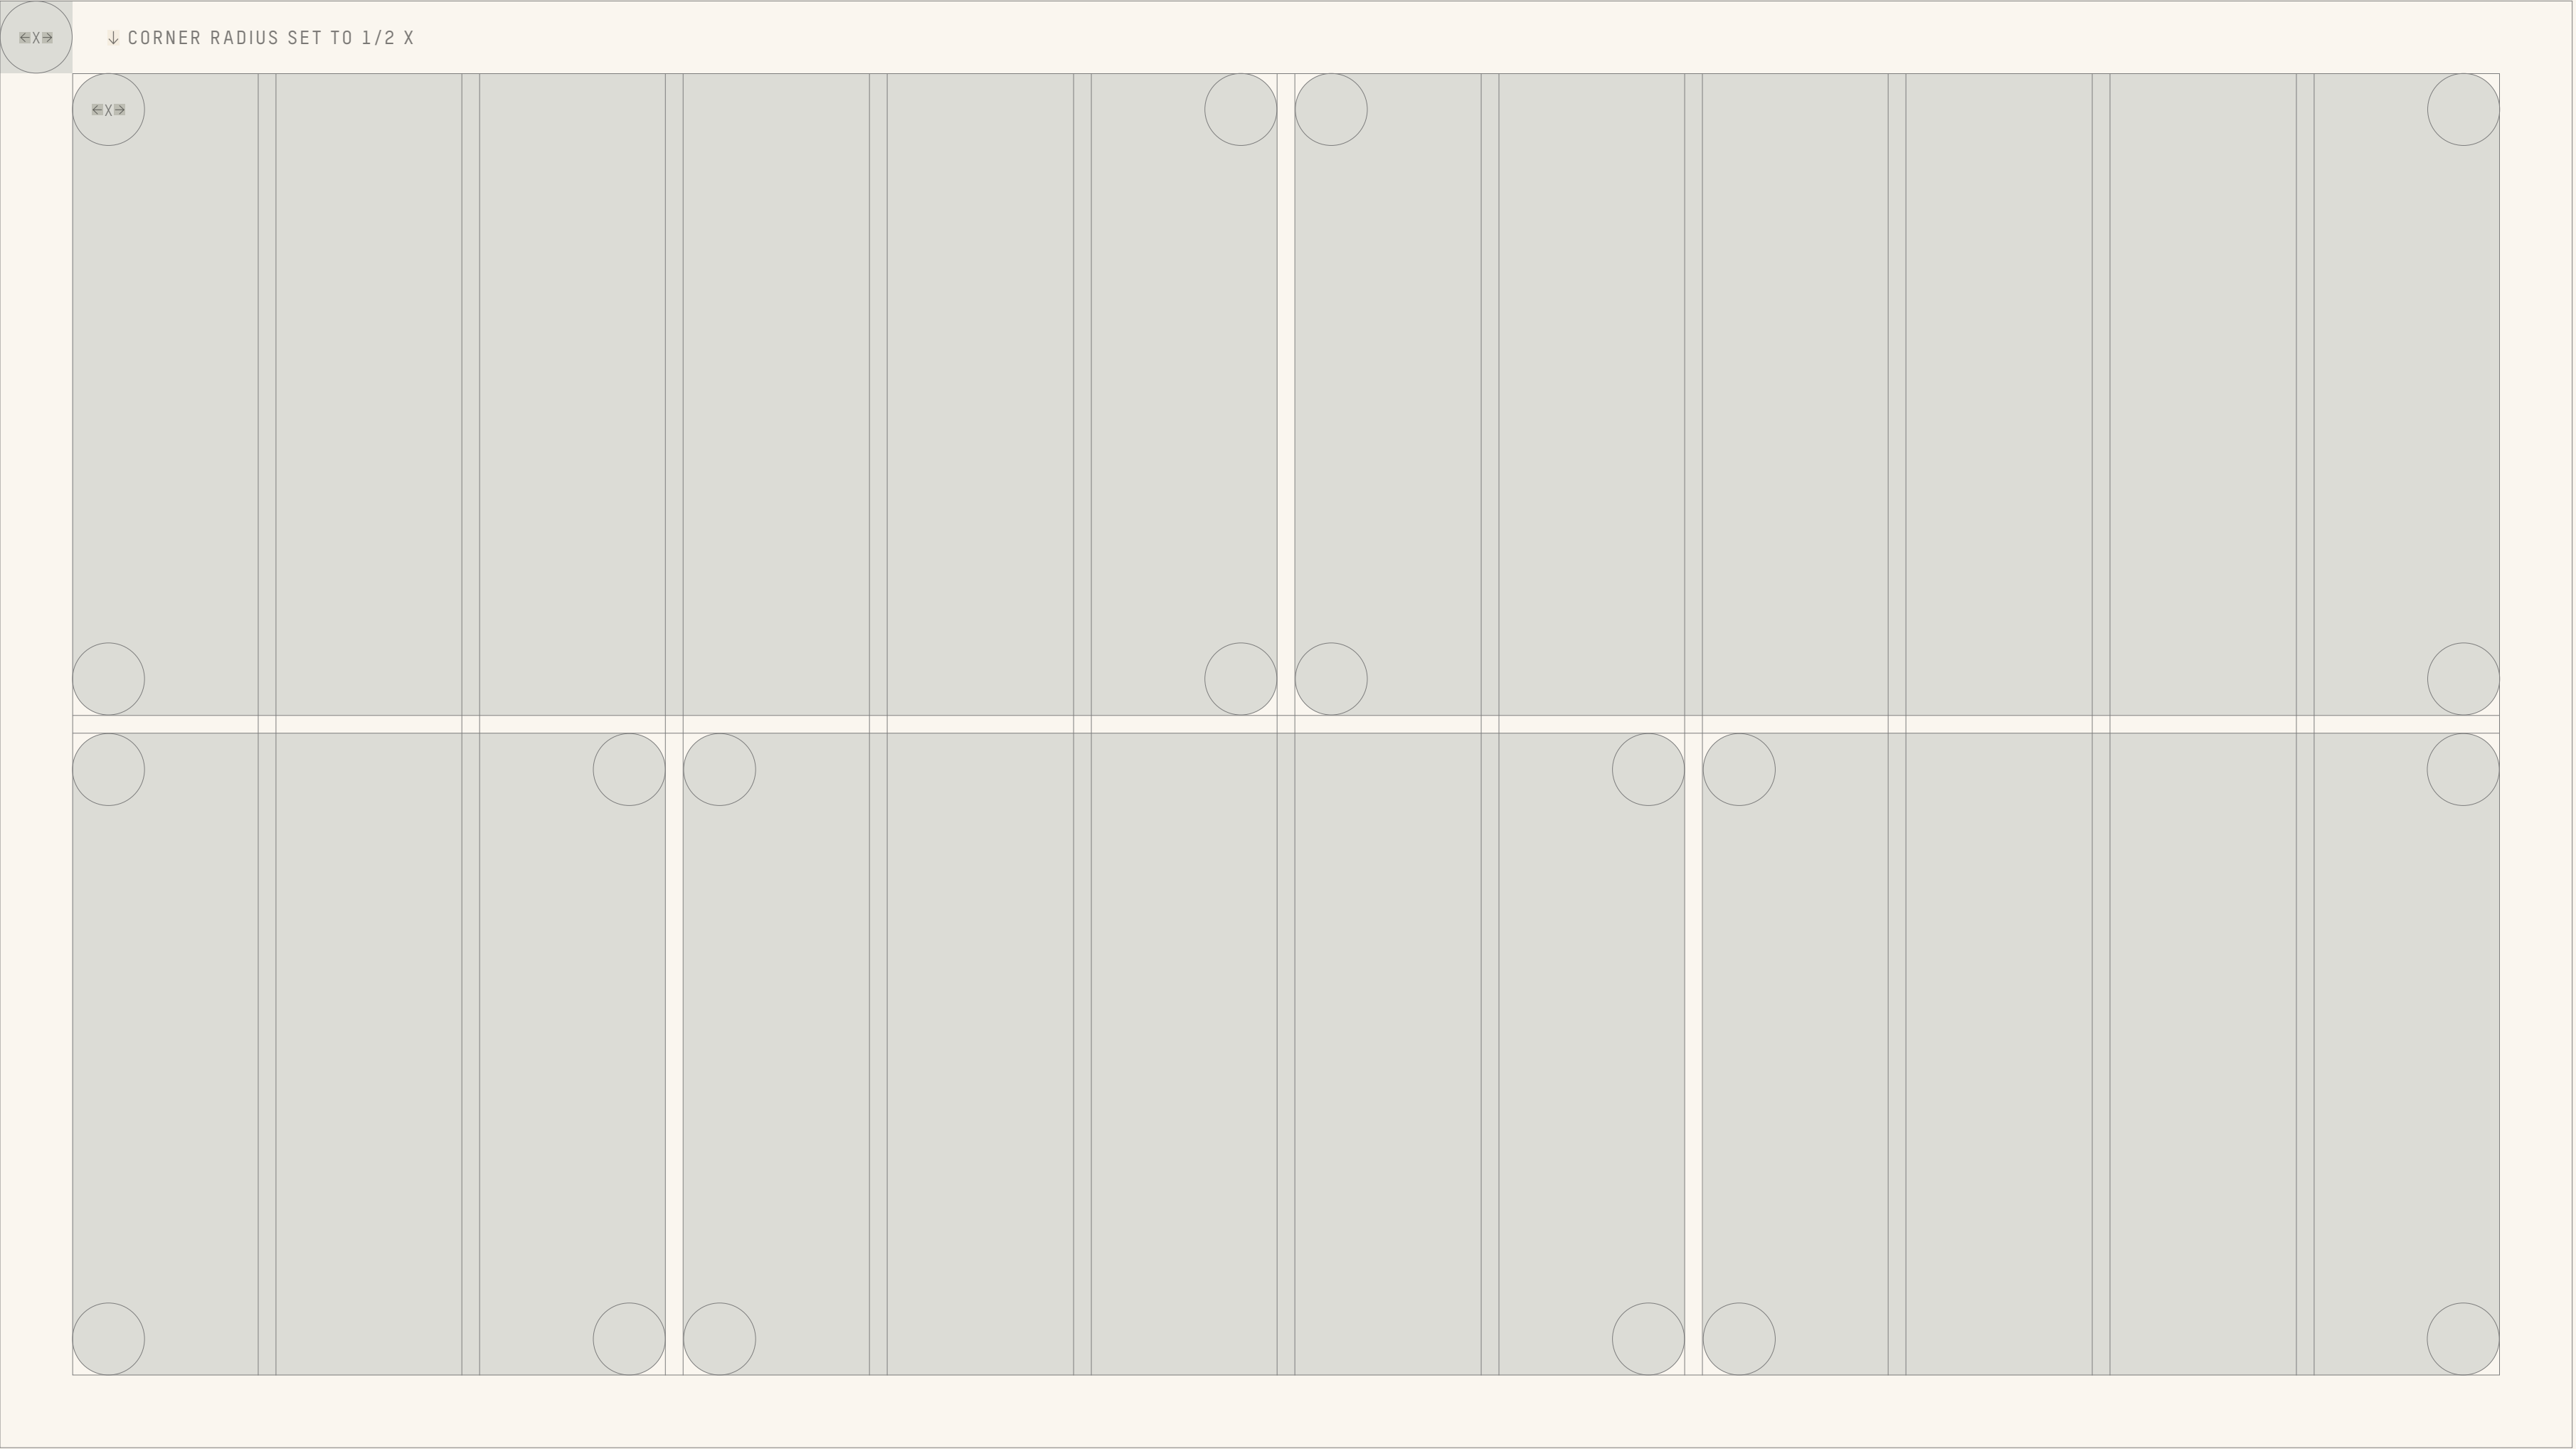

A core component to our graphic system is the use of rounded corner Tile Cards. These graphic devices can be applied to our grid and be used in a variety of ways. Such examples of uses include, holding text, images, illustration, infographics and video.

The following pages outline a few rules and methods for how to apply Title Cards consistently.

Corner radius

No matter what the size is of the tile, the corner radius should be equal 50% or 1/2 of the margin size. For example if our margin is equal to 96px we would set the rounded corner setting to 48px. Following this rule will create consistency whenever rounded corners appear.

Single image

Images maybe be placed within a large single card. Please use the grid rules that were outlined at the beginning of this section to ensure a structured layout.

IQ8

The smartest solar power.

Microinverters are named after their highly intelligent microchip. We customize our chips to maximize the size, weight, reliability, and performance of our products.

Text and image

When placing text content inside a tile shape we use an indent that is equal to the margin size on all sides.

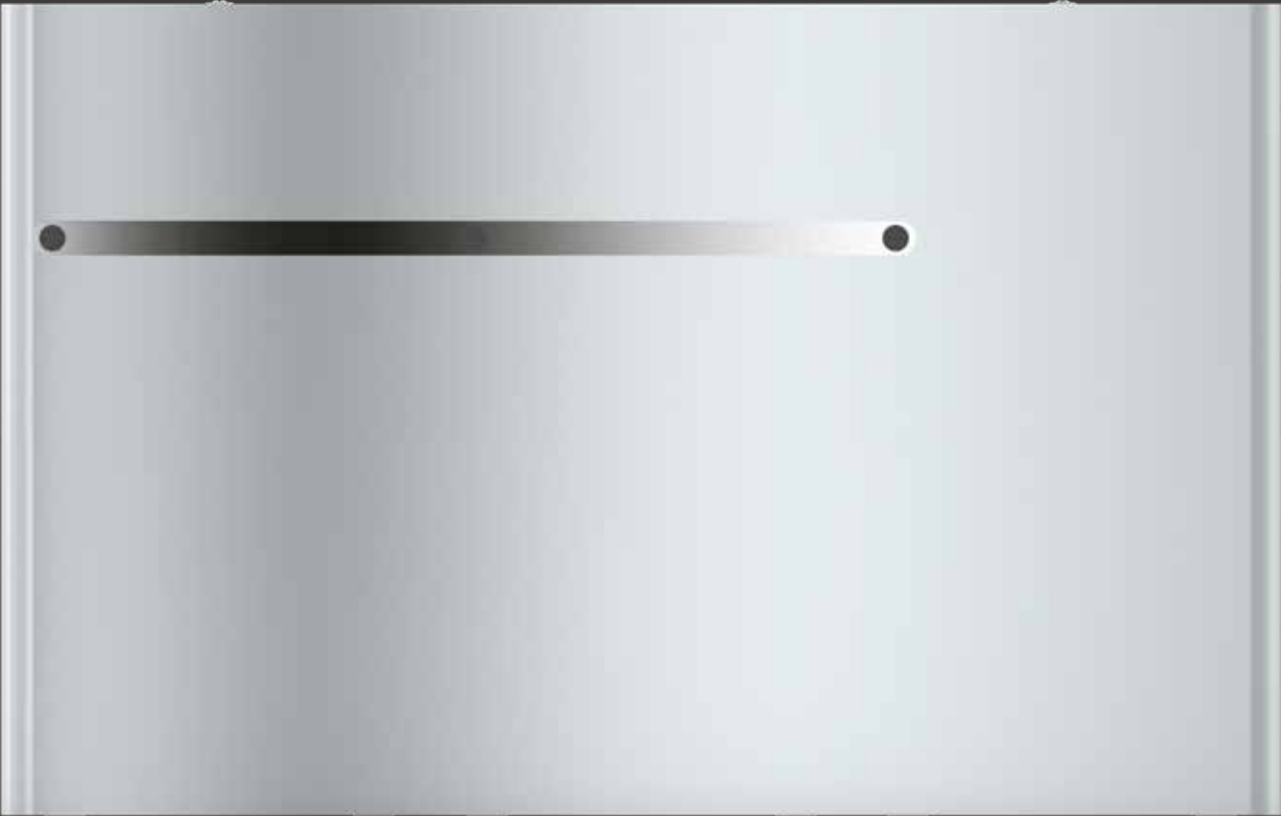

Text and image

Examples of text and image being placed within a Tile.

STORAGE

Low voltage.
High safety.

The Enphase IQ Battery operates with low-voltage DC power, avoiding the dangers that can come with high-volatge DC power.

Text and image exceptions

For some formats, insetting text at the same value as the margin will result in a large indent. In these circumstances we may use an indent value between 1/2X and 1X on all sides.

ENPHASE IQ BATTERY

1/2 X to 1 X

Enphase App

Always know how much power you're making, using, and saving both in real-time, and as it fluctuates over time. Always know how much power you're making, using, and saving both in real-time, and as it fluctuates over time. And prioritize and direct power to essential appliances during a grid outage to optimize energy consumption.

Enphase IQ Batteries

Store solar power to use anytime— at night or during peak hours to reduce energy bills or when there's an outage and utility power is unavailable.

Enphase IQ8 Microinverter

Our new IQ8 Microinverters offer microgrid-forming technology that provides Sunlight Backup to run your home on solar during daytime outages, powered with a proprietary, intelligent chip makes switching between on or off grid virtually seamless.

The Enphase Energy System brings solar, batteries, and software together in one complete package so now you can make, use, save, and sell your own power — all through a smart mobile app.

Text and image exceptions

Example of the exception rule being applied when placing text within a Tile.

And prioritize and direct power to essential appliances during a grid outage to optimize energy consumption.

Enphase IQ Batteries

Store solar power to use anytime— at night or during peak hours to reduce energy bills or when there's an outage and utility power is unavailable.

Enphase IQ8 Microinverter

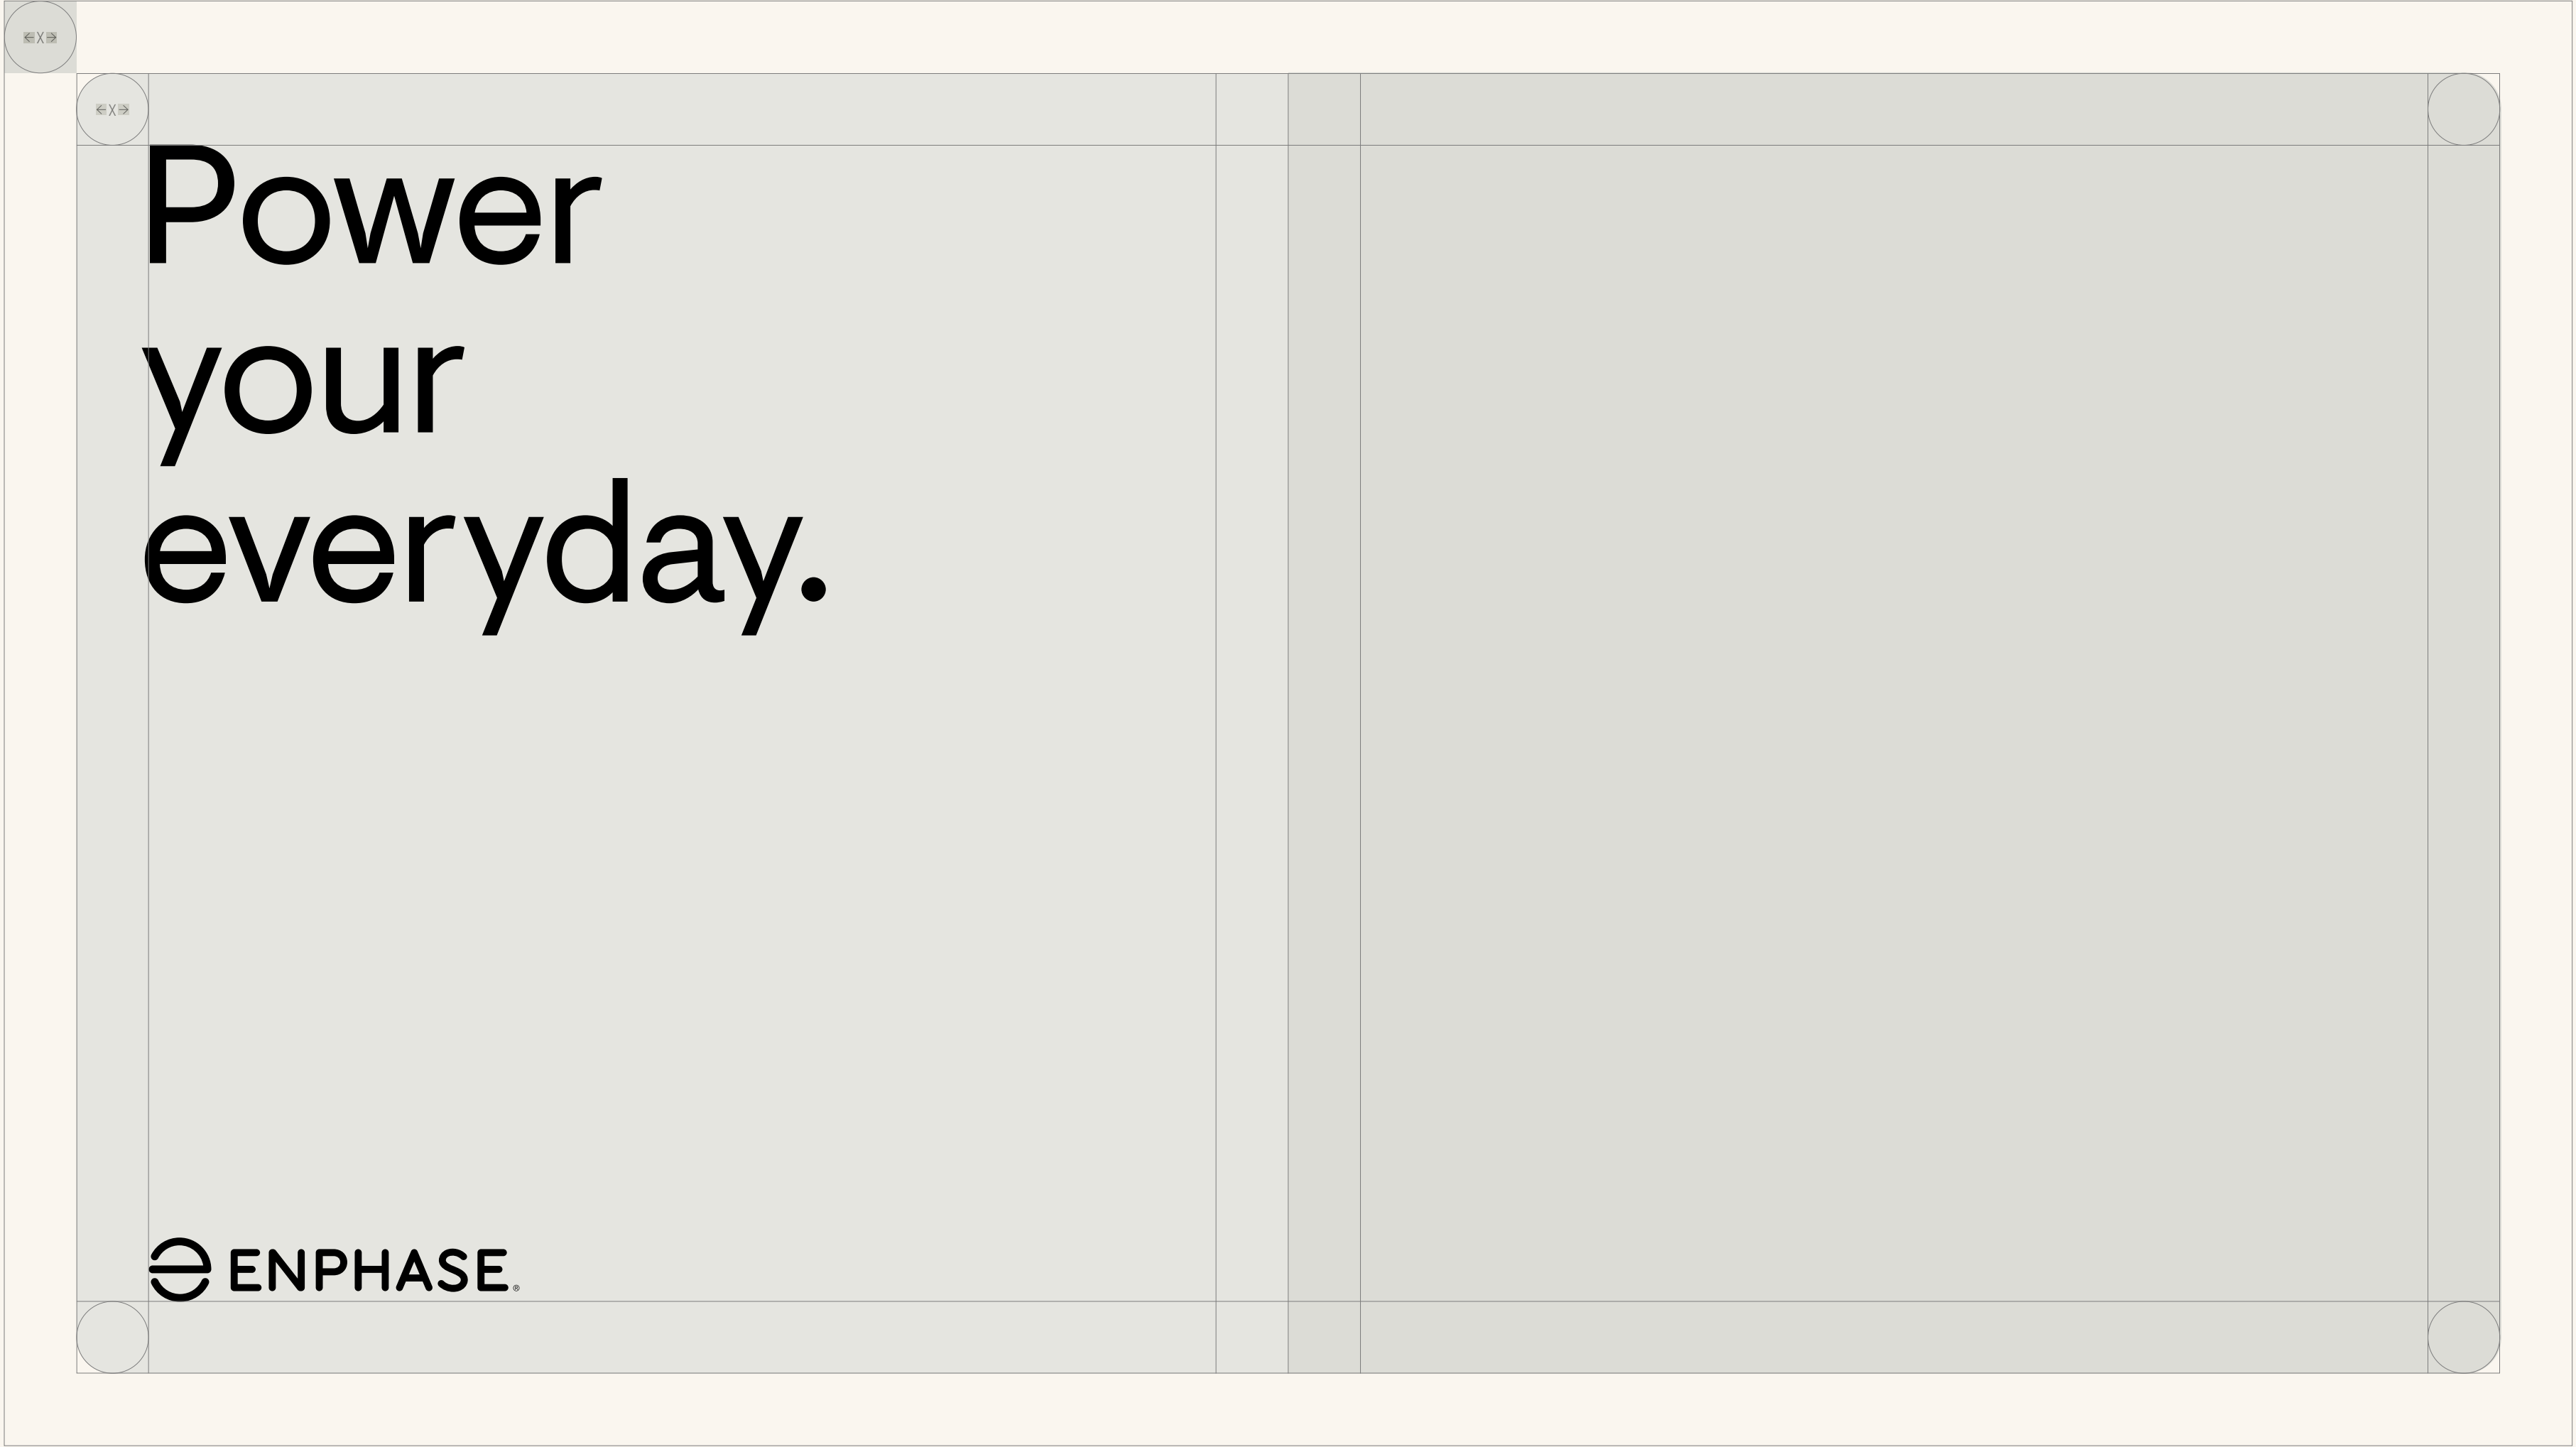

Our new IQ8 Microinverters offer microgrid-forming technology that provides Sunlight Backup to run your home on solar during daytime outages, powered with a proprietary, intelligent chip makes switching between on or off grid virtually seamless.

Split Tiles

Tile shapes may be split vertically and horizontally within a layout. Splitting Tiles offers a great method to divide images and text.

Split Tiles may be created by placing two shapes next to each other, without a gutter, and rounding the outside corners to 1/2 of the margin width.

Split Tiles

Examples of Split Tiles in use. Solid fills from our neutral palette may be applied as backgrounds to Tiles containing text.

Power your everyday.

 ENPHASE.

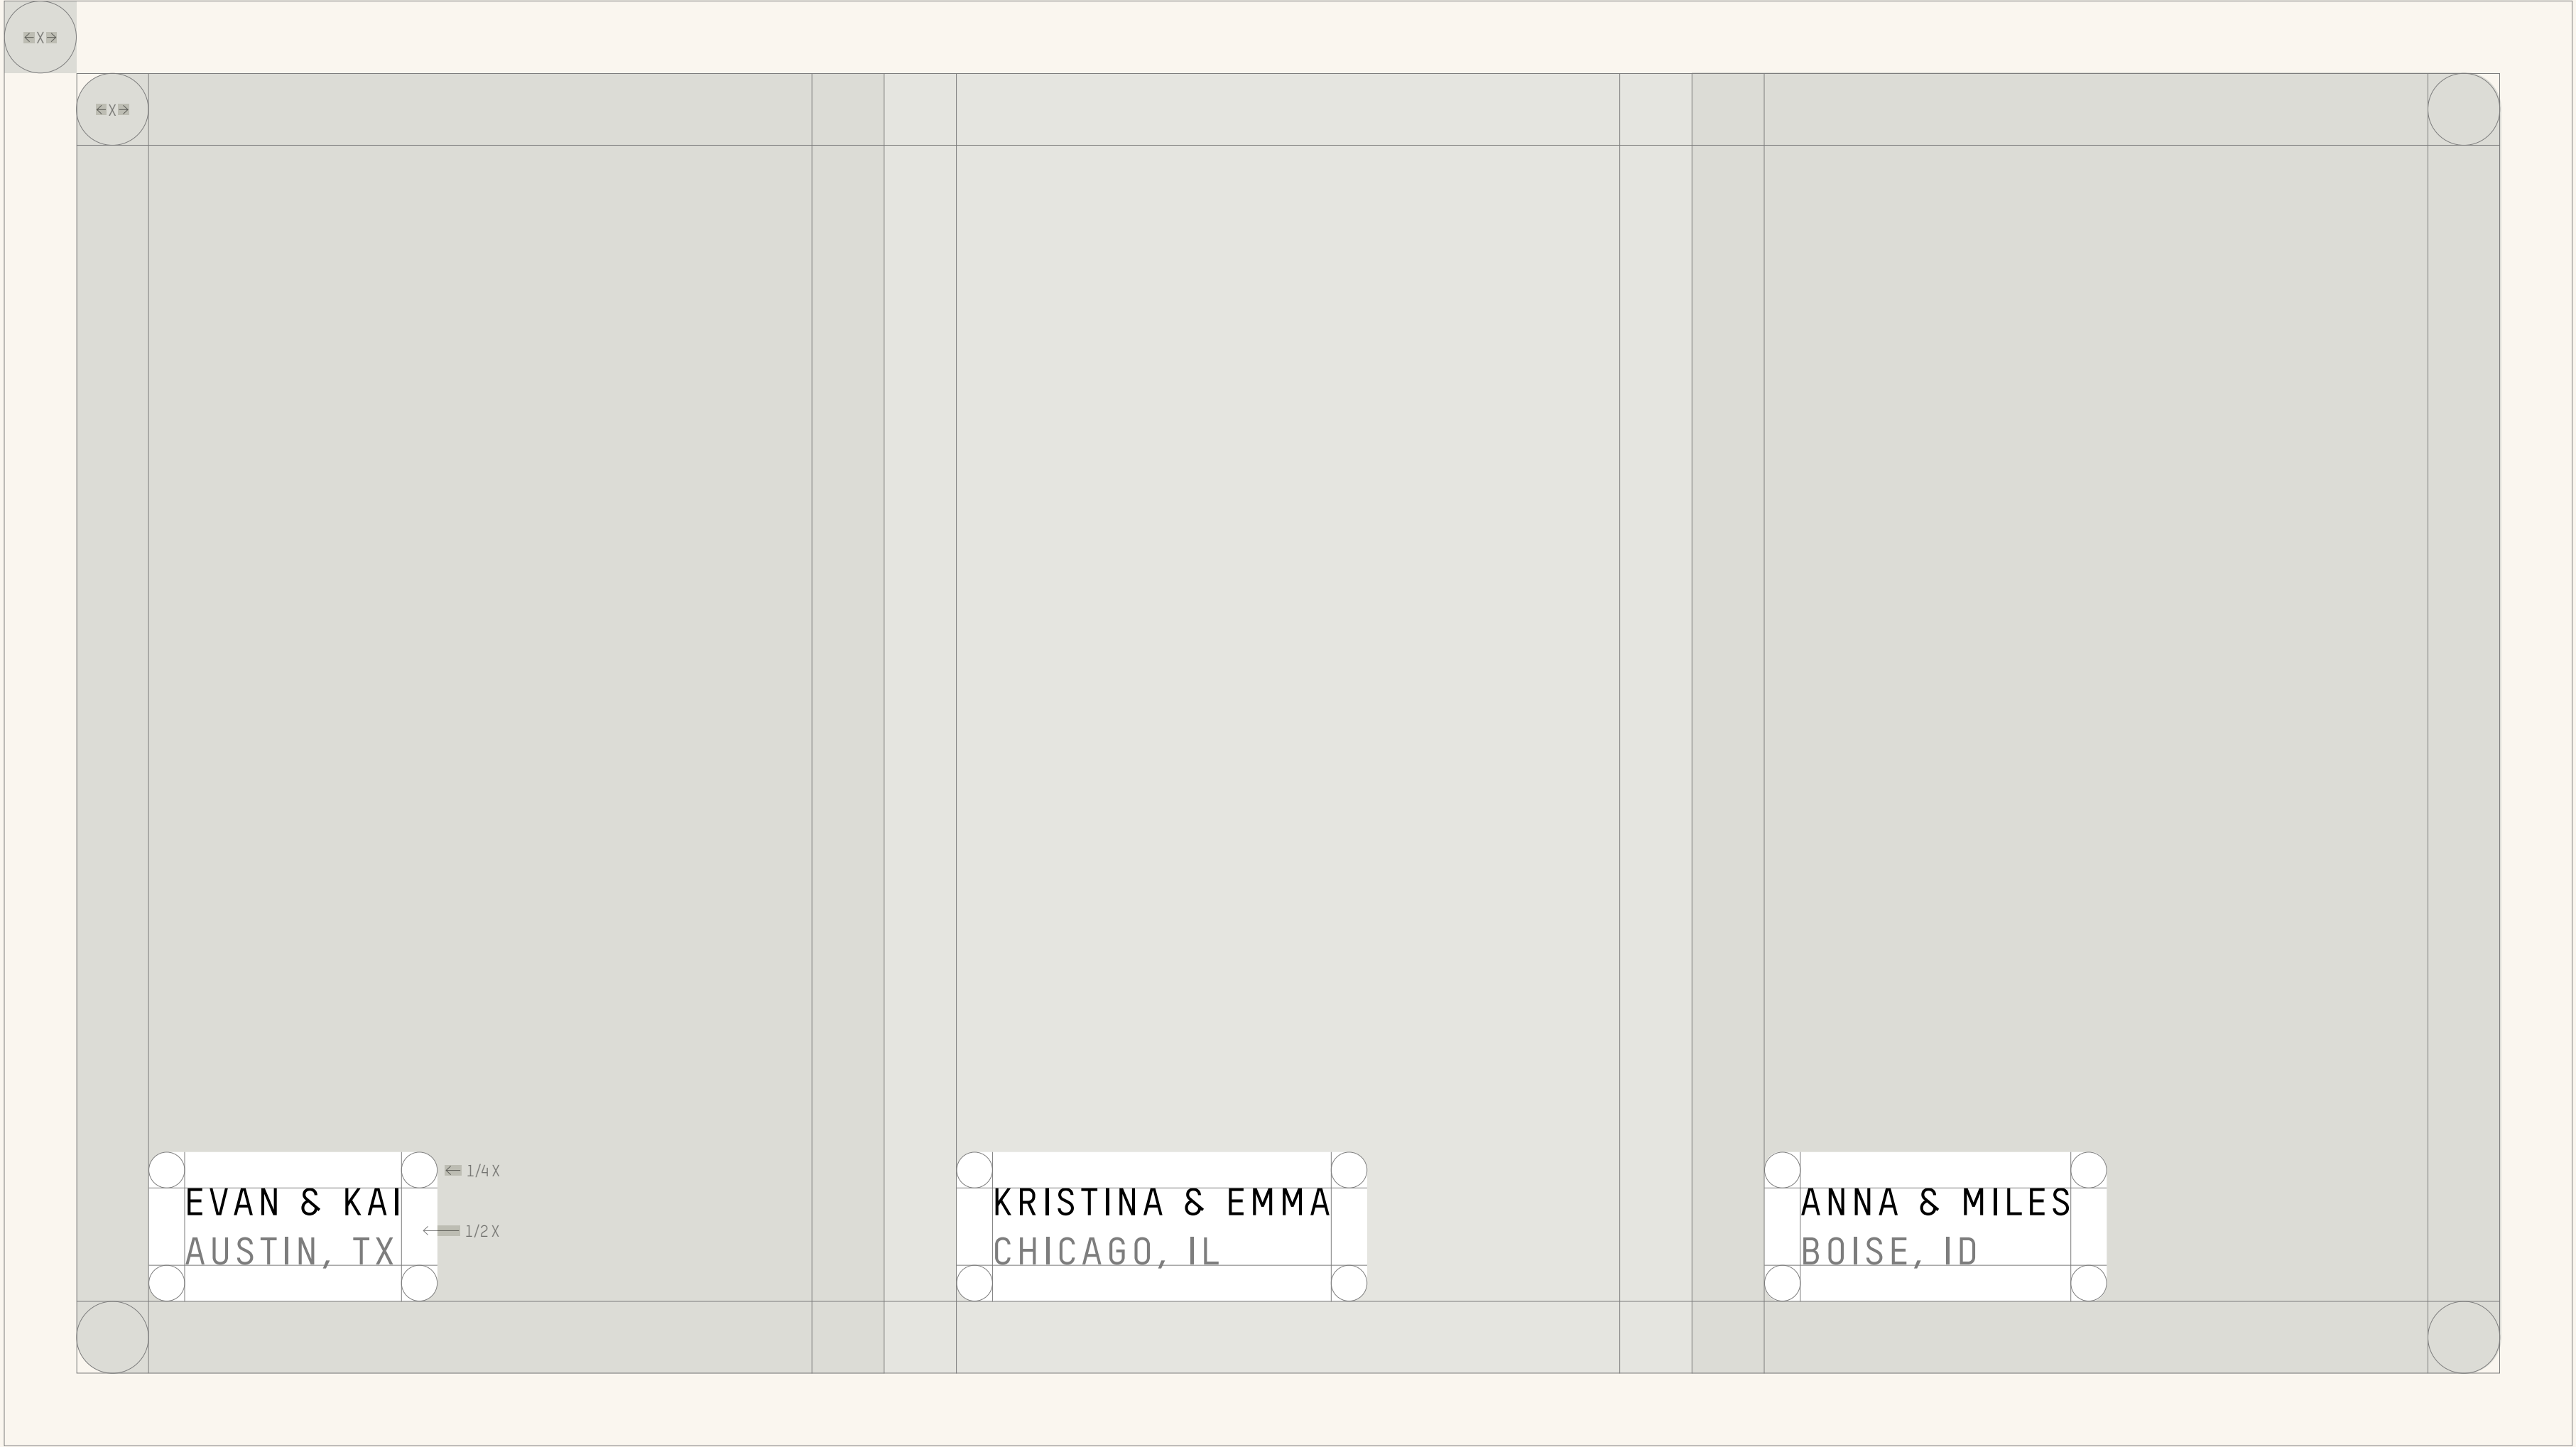

Inset Tiles

Tiles may be inset within another Tile to display captions or other information.

When creating Inset Tiles, use an inset space that is equal to the margin width (X).

The corner radius of caption Tiles must be equal to 1/4 of the margin width (X) and text should be inset at 1/2 of the margin width (X).

Caption Tiles

Examples of Caption Tiles in use.

Tile grids

Grids may created within Tiles in order to divide content. These grids use their own columns and rows, in order to better aid the content it is holding.

When creating Tile Grids, content must use an inset space that is equal to the margin width (X).

Tile grids

Grids may also be split vertically to create multiple rows.

As stated previously, when creating Tile Grids, content must use an inset space that is equal to the margin width (X).

Tile grids

Examples of Tile Grids with two rows in use. Solid fills from our palette may be applied to Tiles containing content. Tile grids should always use images that appears deep etched and doesn't bleed off the layout.

Asymmetrical stacked Tiles

When using multiple Tiles within one application, it's very easy for the layout to feel too structured or gridded. This can particularly be caused when tile gutters align.

Visual interest or rhythm can be created by misaligning Tile gutters and/or using an asymmetrical grid (grids containing 3 , 5 or 9 columns).

Also consider removing Tiles to create white space. Doing so will allow breathing room within the layout.

Asymmetrical stacked Tiles

Examples of Asymmetrical Stacked Tiles in use. Stacked Tiles become particularly useful for when images need to bleed off the container. This is demonstrated in the bottom right corner of the application.

Grids and layout

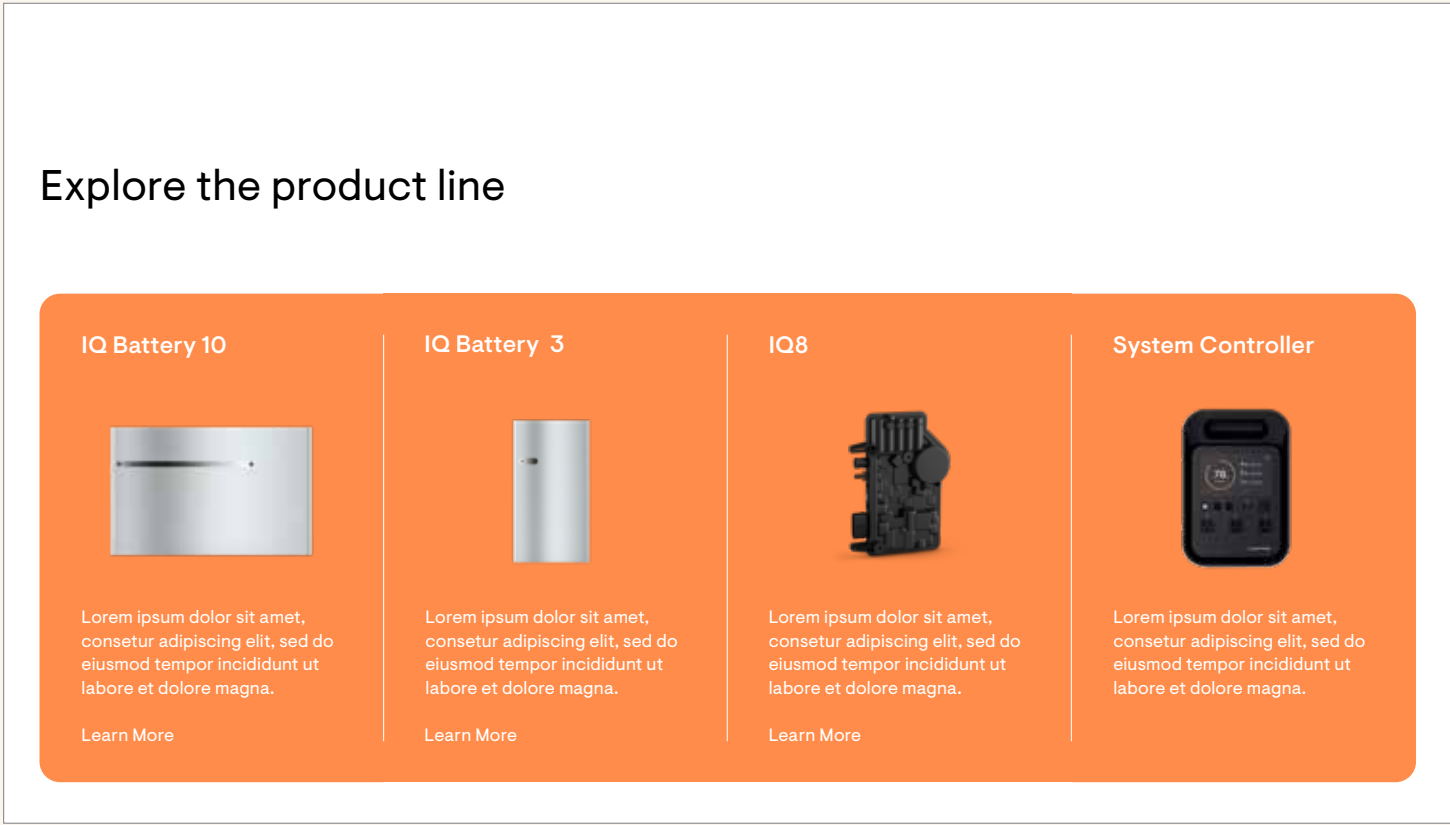

Misuse

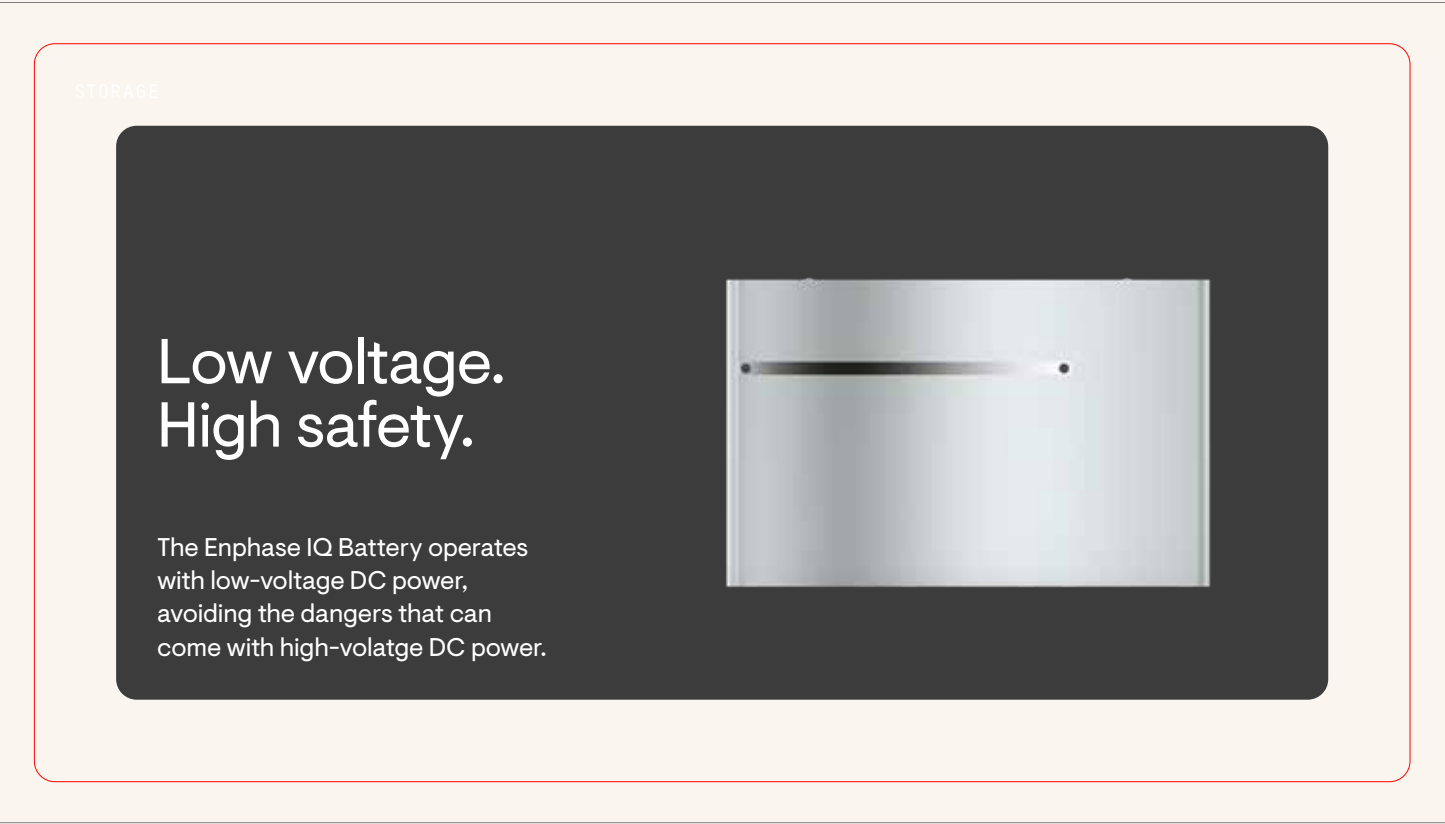

⊘ Don't make gutters too wide

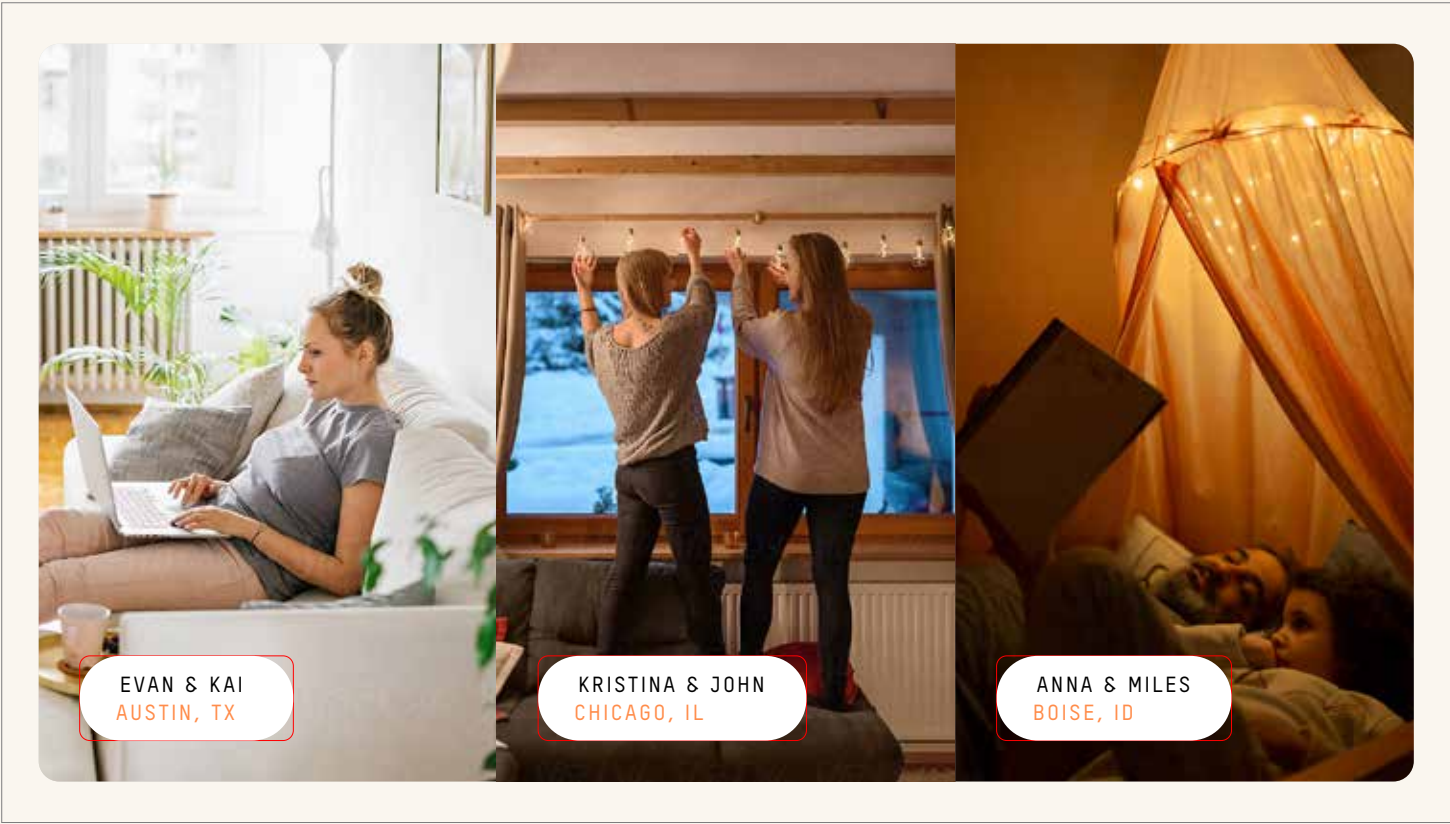

⊘ Don't round corners more or less than 1/2 of the margin

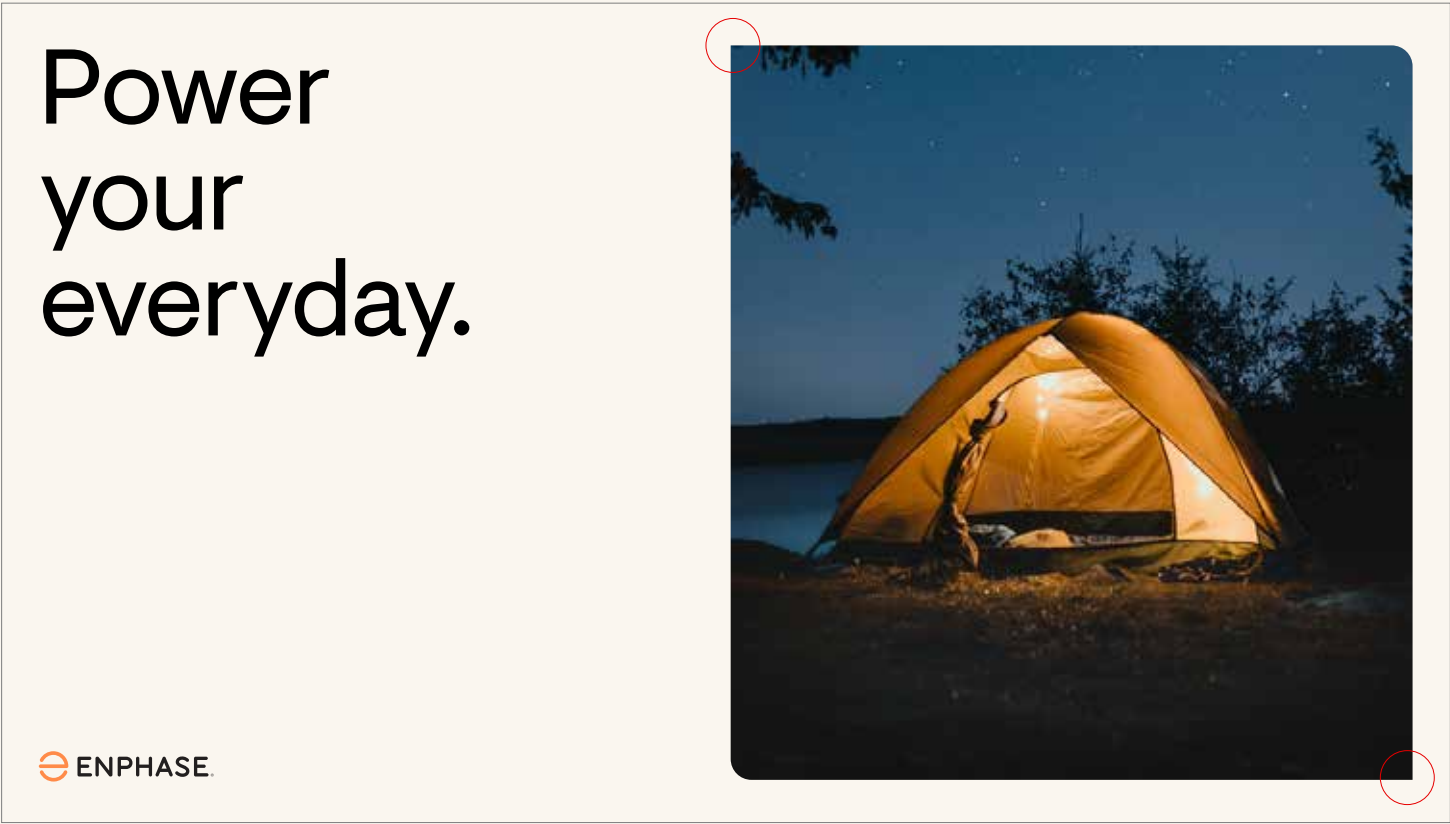

⊘ Don't use colors other than neutrals for tile backgrounds

⊘ Don't make margins more or less than 5% of width or height

⊘ Don't Make the inset circle radius too large or too small

⊘ Don't mix square and round corners if not using split tile

Applications

Example of an OOH billboard using the Split Tile layout.

Applications

Example of brochure covers that use a single image Tile. Consider the placement and use of space around the Tile to create visual tension.

Applications

Opposite presents an example of how multiple Tile layouts may be used for a website application.
